A SQUARE DEAL
FOR
Square Dealers

Square dealers, we take it, are those who try to give their customers goods that are "square" —honest all through. For forty years we have been giving all dealers the "square deal."

We make all the "ENTERPRISE" hardware specialties just as good as we know how—then we go out and tell the public of all the world about their merits. Square Dealers *distribute* them—they are already *sold*. Just ahead is the big demand for

"ENTERPRISE"

Meat and Food Choppers and "ENTERPRISE" Sausage Stuffers, Lard and Fruit Presses. They are being widely advertised now to the public. Write for our literature about them, including our new catalogue of all the "ENTERPRISE" specialties. Get ready for the biggest season you have ever seen on "ENTERPRISE" goods. We are ready. Get your share.

Increase your sale of "Enterprise" Meat and Food Choppers by using our new Booklet: "The Cook, Her Critic and—." We will send you a supply of these on request.

WHAT IT IS

MAXIMUM LIGHT GLASS is not to be confused with ordinary corrugated or prismatic glass. It is a special combination of Lenses and Prisms and the only daylight-increasing system that is such.

MAXIMUM LIGHT GLASS

enhances the value of property by giving perfect interior lighting. One installation, at the cost of a few dollars, does away with the use of gas or electric lights in the daytime.

MAXIMUM LIGHT GLASS acts on forty per cent. more sky area than ordinary prismatic glass and increases the illumination to the extent of five to twenty-five times. It gives a complete diffusion, eliminating all shadows and streaky effects.

MAXIMUM LIGHT GLASS is made in twenty-one angles, and is especially constructed to prevent the accumulation of dirt. The product can be cut, glazed and mounted in lead, copper, or iron intersecting bars, from Architects' special designs.

You now KNOW what MAXIMUM LIGHT GLASS "IS." Watch these ads. and you will know what MAXIMUM LIGHT GLASS "DOES."

A HARDWARE ASSOCIATION FOR ONTARIO

A RECENT visitor to the office of Hardware and Metal was enthusiastic regarding the suggestion made in these columns that the hardware merchants of Ontario get together into an association for the purpose of improving the condition of the trade and remedying many evils which now exist to the detriment, not only of the retail trade but of the jobbers as well, as the financial condition of the former is of vital interest to the latter. The visitor told of how builders induce hardware merchants to compete unfairly with each other. By threats of transferring his trade to another merchant in the same or another town, the builder worms a cut price on goods from one merchant and then carries the figures to a competitor in an endeavor to get closer quotations there. Jealousy is thus created, and the only one who profits is the builder. If the merchants would come together oftener through an association a better feeling would result and price cutting could be guarded against. The same merchant told of how the insurance companies had held him up. The company carrying his risk would only give him a policy for 50 per cent. of the value of his stock, and when another policy was taken out in a second company the first company raised its rates to a much higher figure.

* * *

Another merchant complains of the price cutting in a neighboring town, stating that he can go there and buy some classes of goods cheaper at retail than he can buy from the Toronto jobbers and pay freight. According to him the departmental store competition is not to be considered alongside of the price cutting of the merchants in his adjoining town. He also refers to the fact that the recent open market in lanterns has resulted in nearly every grocer in his town putting in a stock and sacrificing them at almost bare cost. It may take considerable time to break down the trade jealousy resulting from this unfair competition, but a retail hardware association would do much to dissipate this ill feeling, and by regulating prices in order to provide a fair profit the retailers could, by united action, prevent jobbers or wholesalers from encouraging such unfair competition as selling lanterns through grocery stores.

* * *

There are innumerable reasons why the retail hardwaremen of Ontario should get together next Good Friday, as suggested, and form a provincial organization. A letter from a subscriber this week refers to overcharges on freight bills. Acting alone he is practically powerless, but with a strong association in existence such matters could be acted upon and justice promptly secured. The Railway Commission would pay some attention to complaints endorsed by a strong body of retailers.

* * *

The complaint regarding fire insurance also suggests a strong argument for an association. In the United States a hardware merchant can carry $15,000 of his insurance in hardware mutuals, and save 25 to 35 per cent. of the old line rates. The Hardware Bulletin says: "Suppose your fire insurance rate is $1.50, and you have policies in the National, Minnesota, Wisconsin, and Iowa Mutuals for $3,000 each—$12,000 in all. Your premium is $180. You will get a check at the end of the year for at least 30 per cent., or $54. Suppose you have a loss, it will be quickly and honestly adjusted and paid."

Just as the insurance features of the fraternal societies provide an economic reason for the existence of these organizations, so would a mutual fire insurance system prove a bond to cement together the hardware merchants in a trade association.

* * *

Would it surprise many if an examination into the affairs of the old line fire insurance companies would disclose similar conditions as those found in the big life insurance companies in New York? In the hardware mutual companies the merchants not only get cheap and safe insurance, but they know where every cent of their money goes to. Here is a sample statement issued on Nov. 1 showing the business done by the Retail Hardware Dealers' Mutual Fire Insurance Co., of Minnesota, so far this year. The ratio of losses to premiums is only 29 per cent., and it is evident that if this ratio is maintained a very healthy dividend will be returned next year, as has always been the case since the company was organized:

Another interesting feature of the conventions of the retail hardware associations in the States is the "question box." This box is opened in executive session only. Every member has a privilege of placing in this box any question concerning or relating to the hardware business. The secretary usually sends out one month before the convention blanks for questions members wish to have discussed in the question box. The names are never read in connection with the question asked. These discussions have been most interesting and practicable. Ideas are given by practical men and new ideas received by the other fellow.

* * *

In addition to regulating retail prices, overcoming trade jealousies, providing cheap mutual insurance, encouraging educational discussions, etc., the associations in the United States have

WHO GETS THE RAKE-OFF?

Editor HARDWARE AND METAL:

In a recent issue of your Journal there appeared a letter from Purvis Bros., Sudbury, on the freight charge evil, and I am surprised that some able pen has not taken up the cudgel ere this, as I think there is a grievance to be aired re the above charges. Mr. Purvis speaks of the cartage charged at the shipping point, and the advance charges, that no one (unless the R. R. Company) seems to understand, but says nothing about the overweights. I have before me at present a freight bill brought in by the local drayman for collection, and being suspicious as to the weights on said bill and to satisfy my curiosity I weighed up the cases, and find on a shipment weighing 1290 lbs., there was an overweight and charge of 271 lbs. I would like to know who gets the rake-off, the R. R. Company or the shippers. If the former it is a matter for the Railway Commission to deal with, but if the latter I think we should act on the suggestion of Mr. Matthews of Cannington, and organize a retail association without delay.

Thanking you for your valuable space, and hoping to hear from some of the afflicted ones in our line of business.

Yours, etc.

ONE OF THE AFFLICTED.

New Ontario, Nov. 28.

done splendid work in opposing the encroachments of catalogue houses on retail business. The association paper, the Bulletin, monthly contains much valuable information of the work done along this line. The distribution of departmental store catalogues by railroad agents has been put a stop to by united action, and the United States Government has been forced to revise its postal regulations, which had been doctored to allow the catalogue houses to send out their books to the numbers of the various rural mail deliveries without giving any name address whatever. All the departmental stores had to do was to learn the number of boxes on each rural delivery and send out their books without knowing a single name. But united action killed that game and the farmers will not be numbered like criminals for a while yet. Warned by the trade papers, the secretaries of the state associations soon had their members working on senators and congressmen, and the objectionable postal regulations were promptly suspended.

* * *

But the catalogue houses are resourceful and they are now agitating for a parcels post, one plan being to offer publishers of country papers a free supplement containing a lot of very interesting reading matter—and some adroitly worded articles favoring the parcels post scheme of the departmental stores.

* * *

The success of the retail hardware associations in Manitoba and the Northwest should inspire Ontario hardwaremen to form a similar organization. The evils of the credit system can be combatted through organization in Ontario as they have been in Western Canada. Other matters requiring attention can also be acted upon. The question before the trade in Ontario is: "How much longer are we, as retailers, to remain unorganized?" As organization is the keynote to success in modern industry that query should be answered by every merchant.

Retail hardwaremen desirous of seeing an association formed in Ontario or the Eastern Provinces are invited to send their names to Hardware and Metal, so that they can be notified of any action to be taken in the matter by a provisional committee to be formed to take up the work of organization.

AN ENTERPRISING WESTERN STORE.

Williams Bros, hardware merchants, of Gladstone, Man., have supplied the photographs from which the two illustrations accompanying were made. The firm consists of Messrs. A. G. and William Williams, and it has been doing business in Gladstone upwards of seven-

Interior View of Williams Bros'. Store, Gladstone, Man.

teen years, their store being a very large and attractive one. Fifteen years ago the firm had the misfortune of having their store burned down. Three years ago they again moved into new premises, their new store being a solid brick one, and a credit to the town. It has a frontage of 109 feet, all of the windows being of plate glass. The interior is 80 feet by 72 feet, and is finished in hardwood with metallic ceilings. In addition to their hardware business they have furniture and implement departments, a tin shop being also carried on in connection with the hardware store.

One photo reproduced shows one of the store fronts, the windows showing the handy work of an expert window trimmer, mechanics' tools being displayed therein and kitchen ware and lamps in the other. On the outside the farmers' attention is attracted by wire fencing, farm tools, etc., while the townspeople are catered to with a display of hammocks, lawn mowers, sprinklers, etc. On the inside the very large stock carried is neatly arranged, in addition to silent salesmen showcases, tables being used for the display of samples, racks to show guns, oil cans and other goods, in addition to these there being a large amount of shelving for the display of various lines of shelf goods. That the store is thoroughly up-to-date is illustrated by the presence of a modern cash register with handsome, jolly looking and businesslike young ladies to look after the business end of the store.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

No. 1144. A London company possessing quarries, saw mills and studios in Italy for the production of marble and monuments wishes to do business in these goods and also in granite in Canada, and is prepared to appoint suitable Canadian resident agent for that purpose.

No. 1145. A Lincolnshire company manufacturing engines and boilers would like to obtain a share of Canadian orders.

No. 1146. A Liverpool firm are buyers of basswood shovel handles 72-inch by $\frac{5}{8}$-inch; also basswood broom handles 50-inch by $1\frac{1}{8}$-inch in 108-inch by $1\frac{1}{8}$-inch; 72-inch by $1\frac{1}{8}$-inch; 72-inch by $1\frac{1}{4}$-inch; 60-inch by $1\frac{1}{4}$-inch; and 84-inch by $1\frac{1}{8}$-inch; and also in ash quality 50-inch by $1\frac{1}{8}$-inch; 45-inch by 1 11-16-inch; 45-inch by $1\frac{3}{4}$-inch, and 45-inch by $1\frac{5}{8}$-inch.

No. 148. A firm of Sheffield manufacturers invite samples and prices of wooden pick and shovel handles.

No. 1149. A large real estate agent and contractor in Glasgow is desirous of obtaining price of doors 7 ft. x 2 ft. 10 in., made of British Columbian cedar with cottonwood panels, finished complete, ready for hanging, but without hardware, in lots of 4,000 c.i.f. at Glasgow.

No. 1154. A London firm is open to purchase supplies of wood rims for bicycle tires of the single tube and wired-on types.

No. 1155. A Midlands manufacturing firm of implements and tools invites quotations for pick and shovel handles as per specification, which can be furnished with the address upon application to this department.

No. 1157. One of the largest importers in Australia of Oregon pine, spruce, carriage, woodware and builders' hardware, desires Canadian lumbermen and manufacturers to forward lowest export prices for large quantities of his requirements per specifications, obtainable from the Department of Trade and Commerce.

A South Dakota merchant sells general merchandise, drugs, furniture, does undertaking and practices medicine on the side when he has time, having began his career as a doctor, but branched off into business. He gets them going and coming.

SHOW WINDOW TALK

SUGGESTIONS REGARDING CONSTRUCTION AND DISPLAY FROM THE HARDWARE TRADE.

FREQUENTLY much of the advantage that might be gained from a good show window is lost by faulty construction. This is particularly true in the smaller stores. In building them the window is only an incident. No particular plans are made for it. The opening may be small and the glass put in two or three panes when a large single one is the only kind that should be used. This is a fault that can only be overcome after the store is built by rebuilding the front, but there are cases where it will pay.

In a town of about 1,500 recently were seen several examples of this poor style of window building. In one instance the window was too far above the sidewalk. The bottom of the glass was at least three feet from the pavement level. This is a waste of good space. It brings the trim too high also. Think of a stove in such a window. Its top would be about seven feet above the walk—so high that a very poor view is obtained by the passerby. Then with such a high window there is not so much chance of making an extended display of small articles, for the reason that the goods in the front obscure those that are behind. Being almost on a level with the eye of the spectator he cannot see over the articles in front. Thus the depth of the window is in part lost.

As has been noted before, the tendency is toward lowering the windows. Some of the newest ones are built down to within six or eight inches of the pavement. This is particularly true with stores that have large articles to show, such as furniture, stoves, etc. This plan of having a low window is especially good when the things to be shown are large. The spectator can then get the right view of them—the view that he should have—from above. With smaller articles this is not so important, but the low window has other advantages. It allows more light to enter in over the top. The window can be of good height and still allow of plenty of space for the transom lights above. This is important in a store that gets most of its light from the front.

Of course it is not expected that a window, say eight feet wide, would be built down close to the walk. This would not be the proper shape, for with a narrow window it is impossible to show large things much anyway, and for the smaller ones such a low window is not necessary.

But twelve to eighteen inches from the walk is not too low for any window. Possibly fifteen to eighteen would be a good level for the windows in a narrow store—a store that was, say, twenty-five feet wide with two windows. The windows would then be probably eight or nine feet in width and the vestibule would take up the remainder of the space. So a height of fifteen inches from the walk would be a good level.

But where the store has a large frontage and the windows are fifteen to twenty feet wide, there is little danger of getting them down too close to the street level, no matter what line of goods is to be shown.

Then if the window is low and is not boxed in the view into the store is not obstructed, even if there is a fair size trim in the window.

These are some of the advantages in having the window down close to the pavement. There is possibly a little more chance of breakage with a low window, but that is hardly worth considering.

Of course the height of the window should not be sacrificed to make it low. With the ordinary window having it closer to the walk will simply mean enlarging the glass surface, as to lower the whole window would bring it too low at the top.

Front of one of Williams Bros'. Stores, Gladstone, Man.

Another fault noted in the town spoken of was that several of the windows were cut up into two or even four small panes of glass when one large one should have been used. The only reason for this is the additional cost of the large pane. It would naturally have to be of heavier weight that the smaller ones and would cost considerably more than the two or four small panes. But there is no comparison between the two small panes and the one large one when it comes to appearance. By all means the glass in the show windows should afford an unobstructed view. A sash down the middle of a window is a bad feature in every respect, unless, of course, the window is very large. Two small panes are very likely to be common glass, while the larger one will have to be plate, so it is easy to see that the larger pane will have advantages besides its size.

Then if it is necessary to run a sash down the middle of the window it should be as small as possible. There is no need of a six-inch crossbar. An iron or one three inches or even less in width will do the business just as well.

Another fault noted was a rather unusual one. The floor of the window was below the bottom of the glass. It seemed to be at least six inches lower than it should be. This made a bad effect. It made it impossible to place any small object near the glass, and obscured the bottom of any large one. It simply wasted that much space. The floor of the window should by all means be on a level with the bottom of the glass.

Lack of attention to the upper part of the window—the extreme top — is another fault often met with. The trimmer makes a beautiful display on the floor of the window and up along the sides and the back, but if the eye follows high enough it meets with cobwebs and a vacant space. This is only true of windows that are not boxed and ceiled in, of course. The store ceiling is often the window ceiling and the part above the window is often neglected.

If the window is not enclosed the ceiling should at least be given some attention. A good coat of paint with a neat border will do for the ceiling. Or the space above the average height of the trim may be filled in with a lattice work of ribbons or strips of crepe paper. Or wooden scroll work covered with some light tint may be used.

This is a good way to shut off the window that is too high. The effect of a trim is often killed by the large vacant space above it.

THE RAZOR'S TEMPER.

Mrs. Jayhawk.—Just like a man! The idea of losing your temper and swearing at your razor because it's dull!

Mr. Javhawk.—Well, I've got a right to. Didn't the razor lose its temper first?

"MELANCHOLY DAYS ARE COME."

THE end of the year is at hand, and with it comes that bugbear of all business houses—the period of stock-taking. With how much trepidation this tedious job is looked forward to by every one in the trade from proprietor to chore boy—only those who have been identified with the hardware business can understand. But it is absolutely necessary that this should be carried out thoroughly and without mistake, and, therefore, an approved system must be adopted, to secure the best results.

Difficulties to be most carefully guarded against are generally the result of the dealer's optimism. He is anxious to show a good profit for the year's turnover, and, consequently, is rather apt to make mistakes in pricing his goods on hand, unless he strictly adheres to some rule in the matter.

But, if properly carried out, this annual taking of inventory can be made of great advantage to the dealer. For instance, unless he has shown remarkable sagacity in buying, there is sure to be some unsalable stock on his shelves, and that a certain amount will have been damaged is a matter of course. The inventory will enable this class of goods to be spotted, and they should be marked down and put on a table or counter by themselves. A vigorous advertising campaign will make this stock-taking sale a popular feature.

Many retailers make the curious mistake, in taking stock, of pricing all their goods at the figure originally paid for them, adding freight and all other incidental expenses in connection with handling them. The writer of this article has in mind the oldest hardware store in one of Canada's oldest cities. The head of this firm recently died and the executor of his estate decided to dispose of the business. And what a motley array of old-fashioned ware was displayed in that dingy little store! Relics of a by-gone age were eagerly snatched up as souvenirs, rather than from any idea of their utility. And the simple reason for this state of affairs is found in the fact that the late proprietor, clinging doggedly to the notion that goods could not deteriorate in value, persisted in marking prices from year to year, based on the original cost.

The gentleman referred to above had made a neat fortune in the country's early days and the bread-and-butter problem did not seriously enter into his latter days. But there are many hardwaremen throughout the country who cannot afford to ape his policy. See, then, that you show no misleading profits or losses in your inventory, and prepare to enliven the usually quiet post-Christmas days by a mammoth sale of marked-down goods.

GROW WITH YOUR BUSINESS.

THERE is a whole lot to the hardware business these days. It isn't what it used to be by any means. It means more than nails, iron, garden tools and the like. It has many ramifications and reaches in various directions. It embraces silverware, bric-a-brac, imported and domestic wares for household and table use, to say nothing of the constantly increasing products of genius relating to cutlery, tools, etc. It means a whole lot to say a man is a good all-around hardwareman, thoroughly conversant with all goods handled by a modern store. It is sufficient to keep a man constantly studying to hold his own abreast of the procession, and to do this it certainly is necessary to give one's undivided attention to the work. There are merchants who, having won a measure of success, and accumulated a little money, are apt to dip into other things, to invest in enterprises foreign to their business, to take stock in all kinds of companies and to have a good many irons in the fire. Such a course causes a good many failures, where often a big success would have been scored if the spare capital had been used in building up and extending the business from which it was realized.

KEEPING OF CLERKS' TIME.

AN important question has been raised by Mr. W. H. Wiggs, the head of the large hardware and plumbing establishment in Quebec City. He asks other wholesale merchants to give their views regarding the recording of clerks' time, the payment of overtime, and the granting of leave of absence with pay. We trust that the questions asked will be replied to by both jobbers and retailers, and space will be given to any correspondence sent Hardware and Metal on this subject.

In an increasing number of large establishments the time clock is being installed, the time of all employes being recorded, and faithful service and overtime being rewarded by the granting of vacations with payment of employes' wages when on their holidays. In discussing this subject recently Mr. Adam Taylor, of the Taylor-Forbes Company, stated that at their works at Guelph every employe, from the president down to the office boy, punches his time in the clock, and a record is kept of all lost time.

Mr. Wiggs' letter should draw out an interesting discussion. It follows:

"Editor Hardware and Metal,—As a great number of your readers are interested in the matter of their clerks and employes keeping a faithful observance of their 'time,' I would like to have their views and ideas in regard to same. Perhaps some of the large supply and hardware houses would be willing to give your readers the benefit of knowing how they handle the recording of clerks' time, if fines or rewards are imposed, if extra time made after hours is paid for and on what basis, if absence for sickness, funerals, etc., is granted, and on what basis.

"An impartial and fair adjustment of these questions is necessary for the welfare of any business on both sides, i.e., that of employer and employe, and with this object in view I am taking the liberty to write you, Mr. Editor, to get your valuable assistance to form a right and unbiased judgment.

"Yours truly,
"W. H. WIGGS."

Quebec, Nov. 29, 1905.

COMPETITION IN LANTERNS.

IN an interview with one of the manufacturers of tubular lanterns, Hardware and Metal learned that these goods have been sold during the past year at cost or under, due largely to there being too many producers of this line of goods in the Dominion. For some years there was an understanding existing between the four manufacturers which enabled them, as well as dealers generally, to get a fair profit, the result being a first-class lantern in every respect was supplied the consumer, and while more lanterns have been made this year than ever before, (a large portion of which have gone across the line into the U. S. on account of the price in that country being very much higher than in Canada) neither the manufacturer nor the dealer have made a living profit, and the quality of the goods has steadily deteriorated. Consequently, the lantern which is being supplied to-day is much inferior in quality, and instead of giving good service for three or four years, the consumer will find that while they are now purchasing cold blast lanterns at a much lower price than heretofore, the lantern will only give them about half the life as compared with what they have been purchasing for some years past. Consequently, in the long run they will prove to be more expensive.

It is claimed that it is impossible to make a good cold blast lantern, considering the present price of tin plates, solder, brass and other metals entering into the manufacture of these goods, to cost the retail merchant less than $6.00 per dozen, and unless the manufacturers bury their grievances, get together and secure a fair price for a good article, it is likely that the quality of the lanterns that will be made in the future will be very inferior to what has been supplied in the past.

American manufacturers get $6.40 per dozen for their product from the wholesale trade, who sell to the retail merchants at $8.00 per dozen, and they are selling to the consumer at from 90c. to $1.00 each. This price enables the manufacturer to supply a first-class, durable article.

We are hearing a great deal these days about combines and monopolies, but if the result of an arrangement or an understanding will give the maker and dealer of this line a fair profit and the consumer a good article at a reasonable price, then in the interest of all parties, associations and so-called combinations had better be continued in all lines of goods manufactured in the Dominion.

Low priced goods made from inferior material are not desirable and are not cheap under any circumstances.

RECIPROCITY AT HOME.

HOW many retail dealers encourage the idea of patronizing home institutions, even to patronizing their own newspapers, to the extent of buying goods outside of their own lines from their home merchants? An exchange rightfully says:

It is a fact that in most small towns the dry goods, clothing and furniture stores do not carry a very large assortment of goods and, in many cases, carry the same cheap lines that were in demand when the country was new and when the people were able to buy only cheap goods.

A great change has taken place in the last quarter of a century and the people, as a whole, are well-to-do, but the average country store has not kept pace with the increase of wealth of the community. With the exception of those who never go away from home, or the miserly, who live only to work and save money or invest every dollar in more land, the tendency of the people is to buy better goods of all kinds as they are able to do so.

The man who can afford it likes a good house with modern conveniences, whether he lives on a farm, in a country town or in the city. When he has a good house he wants it nicely furnished. The writer has in mind a young druggist in a small town. He was ambitious and kept his stock up-to-date, had a modern establishment worthy of a much larger town; he advertised heavily and consequently had a good business and made money. He married, built a good home and wanted to furnish it in keeping with the house and his ability to do so. His town boasted of one little furniture store whose assortment of goods consisted of the cheap variety of furniture and carpets; there was nothing in it he wanted. The druggist, however, was a strong advocate of the idea of patronizing home institutions, so he told the furniture dealer that he wanted to furnish his home with better goods than he had in stock and said: "You give me a letter to your jobber in Winnipeg and I will go there and select the goods and have them shipped to you and allow you a per cent. of profit" (which they agreed on). This was the proper thing to do. The druggist probably got his furniture as cheaply as if he had gone to Winnipeg and bought it at retail. He kept the good will of his home dealer and gave him an opportunity to make a nice profit on the bill.

If the dry goods merchant, the furniture dealer, the banker and the liveryman would do the same thing with their vehicle dealer when they want a carriage, it would be much better than it usually is. Reciprocity should be practiced among retail dealers; they should buy from each other, and in the end they would all be as well off and there would certainly be less feeling of jealousy between merchants.

Every merchant in a town should take a pride in his own town and do everything he can to build it up. For that reason he should try to assist his competitor in making a sale, when he cannot make it himself, instead of encouraging the business to go to some other town or to a catalogue house.

METALS STILL SOARING.

NOT long ago we called attention in our editorial columns to the remarkable strength of the metal market. Since then, however, practically every metal on our list, except antimony, has been substantially advanced, so that in the week just past the price changes were very general and almost bewildering.

Perhaps the most astonishing element in this "bullish" market has been pig lead, a metal which was expected to decline after the peace had been signed. In view of this, the wise ones have been absolutely at a loss to explain its rapid advance, to make a record first for the year 1905, and now to reach the highest price for three or four years. What makes this situation most abnormal is the fact that it should come at this season, when there are, apparently, but few uses to which lead can be put. But we have, nevertheless, the assurance of a most trustworthy foreign authority that these rising prices are simply the natural outcome of a market condition in which the supply is scarcely able to keep pace with the demand.

Copper, also, is occupying an important place in the thoughts of every metal merchant. During the past week it has not advanced in price, though its tone has strengthened. But last week dealers were astounded at a series of rapid jumps which brought the price up to two cents above that current seven days previously. And it was in this feverish period that an amusing deal was made. A Montreal jobbing firm who had a car of ingot copper in transit from New York, were made a favorable offer on it by another firm of the same city, and the car, which had not yet arrived, was turned over to them. In the meantime copper was soaring merrily, and the demand was such that a third Montreal jobbing house, running short of stock, approached the holders

of the car in transit, and another deal was fixed up, in which it passed into new hands again, while the middle firm pocketed a profit of over two hundred dollars on the transaction. And still copper went upward. Now it happened that the firm who had originally bought the copper in New York, being pressed to fill orders, decided that they must have that car back, and on its arrival they made an offer to the holders, which the latter accepted, making thereby a profit of almost one cent per pound. Two firms had profited handsomely on this carload, owing to rapid advances, which, inside of a week, totalled nearly two cents. And even the original firm were enabled to retrieve their loss on the car when still another rally occurred. This incident is probably unique in the history of Canadian commerce.

And what caused these advances, which made handsome profits for so many owners of the same carload? Only a clique who are "in the know" can tell. For it is almost inconceivable that a merely natural demand could produce such a result without assistance from a corner, or an attempted one, on the exchange. Some time ago we noted a rumor that a large quantity of American copper had been assigned to China, to await higher prices on this continent. Nothing has been heard of its return, but unless the story was a pure canard, the owners could realize a nice margin by landing it at any American port just now.

Copper and pig lead have furnished the most sensational features of the past few weeks. But an interesting situation has also developed in pig iron. This metal came to the front of the stage some few weeks ago, when prices began to ascend very rapidly, as a result of heavy American buying in Scotland. Prices got so high for some grades of iron that a number of Old Country rail mills were compelled to suspend operations, as they could not find buyers to pay the price for their products necessary to ensure the cost of running their plants. It is easy to understand how sweeping would have been the result upon the industrial world had this boom continued. But it now appears that it was the result of an artificial condition created by speculators, and it is already subsiding.

The activity in the primary markets was, naturally enough, reflected in sheet metals, which have been forced up to keep pace. Even this week we are reporting higher prices in Canada plates, black sheets, tin plates, terne plates, and sheet zinc. Heavy goods are, indeed, the feature of the hardware markets.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 9

FIRST a retail clerk, then a warehouseman and finally a hardware traveler, is the experience in a nutshell of Mr. L. N. Vanstone, traveling salesman representing H. S. Howland Sons & Co., Toronto, in Eastern and Northern Ontario for the past ten or twelve years. Commencing as a retail clerk in the store of Messrs. Lee & Edsall, Bowmanville, Mr. Vanstone, after about three years experience with this firm, came to Toronto and engaged as a clerk with the Aikenhead Hardware Co., remaining with that firm for a couple of years. Later he entered the Howland warehouse and after a few months on the inside was chosen as one of the traveling representatives of the firm, his retail experience proving of great advantage to him in his wholesale engagements.

L. N. Vanstone,
Representing H. S. Howland, Sons & Co., Toronto, in Eastern and Northern Ontario.

Mr. Vanstone took his first wholesale order at Oshawa and with several minor changes his territory has continued to be the main line points between Toronto and Kingston and Toronto and North Bay. His quiet demeanor and sterling character has made him a favorite with the trade, he having found the best method of securing business for his house to be in studying the interests of his customers. "A pleased customer is most likely to be a permanent customer" has been his motto and the marked increase in business done in his territory since he took up the road, is sufficient evidence of the success of this system.

Mr. Vanstone was one of the party of Canadian manufacturers which visited Great Britain last Summer, representing the Graham Nail Works, an industry controlled by H. S. Howland, Sons & Co., on the trip. The educational value of the visit to Great Britain and France is fully realized by Mr. Vanstone and his value to his employers is much greater as a result of the experience gained and knowledge secured by visiting many of the plants of the manufacturing concerns which have helped to make Great Britain the leading nation in the commerce of the world.

THE EXPENSE ACCOUNT.

A MAN with a taste for figures has studied out the cost of running a business and as a result of his investigation he says: It is surprising that many good business men deceive themselves in regard to the cost of doing business—that is, the total cost as compared with the total sales. If they are making a good profit such a mistake may do little harm, but if the profit is small the error may be disastrous. We occasionally hear of a retail business being done at about a cost of 10 per cent. says an exchange, but if the matter was investigated it would probably be found that several items of expense had been omitted and that the actual cost was nearer 25 per cent.

Interest on the capital should be charged at a fair rate, say 5 per cent. The salary of each partner should be figured as part of the expense. All clerk hire, commissions, rent, taxes, insurance, heating, advertising, traveling, postage and office expense, breakage and repairs, freight and cartage, as well as all material used in the store, such as paper, twine, etc., should be included; in fact, the expense of doing business covers every cent paid out except the invoice cost of the goods, and no concern can live unless they add to the invoice enough profit to cover all expenses of every description. It should be remembered that 33 1-3 per cent. should be added to the cost to cover the expense of 25 per cent. on the sales.

Mr. Henri Godin, of Joseph Godin & Fils, wholesale and retail hardware merchants of Three Rivers, called on some of the Montreal jobbers last Monday.

PERSONAL MENTION

Ontario.

Harry Mahony, Guelph, made a trip to Toronto during the past week.

Charles Bull, plumber, St. Thomas, visited Toronto during the past week.

D. Bonathan, Newcastle, called on Toronto hardware jobbers on Tuesday.

W. W. Carter, Fesserton, was a caller on Toronto hardware jobbers this week.

James Boxall, plumber, Lindsay, called on Toronto supply houses a few days ago.

Mr. Graham, of Graham & Son, Inglewood, was a visitor in Toronto on Thursday.

Mr. Jones, manager of the Pease Foundry Co., Toronto, visited Ottawa this week.

Mr. and Mrs. Thomas Oliver, Copper Cliff, have returned from a business trip to Montreal.

M. R. Summerfeldt, Mt. Albert, spent a couple of days in Toronto this week on a buying trip.

Walter Grose, manufacturers' agent, Montreal, spent a few days in Toronto and Hamilton this week.

W. M. McInerney, plumber, Chicago, has returned home after a visit paid to his old home in Toronto.

Mr. Peaker, Sr., of Peaker & Son, Brantford, called on plumbing supply houses in Toronto this week.

Mr. Harry Johnston, hardware merchant of Millbrook, is said by travellers to own one of the finest trotters in Ontario.

Mr. A. J. Oliver, representing the R. McDougall Co., manufacturers of pumps, Galt, was a visitor in Toronto on Wednesday.

R. A. Mulholland, the well known and popular hardware merchant of Port Hope, still sings the airs of the Trent Valley Canal.

W. B. McArthur, hardware merchant, Perth, died suddenly of apoplexy on Tuesday of last week. The deceased was 56 years of age.

Mr. Ben. Day, favorably known amongst commercial travellers, is again in charge of Messrs. Madole & Wilson's store at Napanee.

Wm. Murdie, late of the firm of Sills & Murdie, Seaforth, has bought out the hardware business of D. C. Taylor, Lucknow, taking possession on Dec. 1st.

Joseph Akitt, hardware merchant, Creemore, who recently moved into new store building, is doing some fine window dressing, according to travelers who visit that town.

Mr. Thomas Wright, representing H. S. Howland, Sons & Co. in Manitoba and the Territories, is spending a fortnight in Toronto. Mr. Wright reports things in the west to be in splendid shape and everyone prospering.

Benjamin Warren, hardware merchant, Perth, has been confined to his home for the past two or three weeks owing to illness. His many friends hope to hear of his early recovery.

Mr. Peleg Howland, of H. S. Howland, Sons & Co., Toronto, returned last Saturday from a two months' trip through Western Canada, visiting Pacific Coast points while on the tour.

Mr. F. A. Hoar has bought the hardware business of J. C. McFarlane, of Barrie, and took possession on Dec. 1st. He would be pleased to receive any new catalogues that the wholesales have issued.

Mr. R. F. McKenzie, Manitoba representative of Rice Lewis & Son, is in Toronto on a trip which will keep him here over the holidays. Mr. McKenzie is an enthusiastic westerner and speaks enthusiastically of things there.

Hardware, tobacco, jewelry, etc., are the varied lines carried by Mr. J. T. Locke, Corunna, Ont., according to the announcement on his letter head. What merchant can show a wider selection? Mr. Locke in sending his renewal of subscription for Hardware and Metal says: "I am well pleased with your paper and consider that it covers the ground very well."

Quebec.

Joseph Ray, of L'Epiphanie, visited Montreal supply houses this week.

W. Gaulin, tinsmith and plumber, of St, Cesaire, was in Montreal this week.

Mr. Paquette, of Paquette & Frere, Berthierville, was in Montreal during the week.

John H. Bell, hardware merchant, of Mattawa, Ont., visited Montreal on Wednesday.

Mr. Hebert, of Hebert & Guertin, St. Charles, was an out-of-town buyer in Montreal this week.

F. Gaulin, of F. Gaulin & Co., tinsmiths and plumbers, of Granby, visited Montreal a few days ago.

Mr. Haskill, jr., of the Haskill Lumber Co., Fassette, Que., visited Montreal a few days ago to purchase supplies.

J. H. Morin, of Henriville, was in Montreal on Wednesday, making some purchases for his hardware department.

Ludger Gravel, the prominent manufacturers' agent of Montreal, has been proposed for aldermanic honors in that city.

Mr. Gervais, of C. O. Gervais & Frere, general merchants, St. Johns, came to Montreal during the week on a purchasing expedition.

John Walker, representing Caverhill, Learmont & Co., in the city of Montreal, is quite ill, suffering from blood poisoning in the hand. He underwent an operation a couple of days ago, which brought considerable relief.

The twelfth annual convention of the Canada Paint Company's travellers and superintendents has been called for Monday, the 11th inst., at the company's headquarters in Montreal. The gathering will continue during the week, and subjects of various interest will be discussed.

Herbert E. Brooks, managing director of the Association of Portland Cement Manufacturers, London, Eng., visited B. & S. H. Thompson & Co., of Montreal, this week. Mr. Brooks' firm manufacture the famous White Bros.' English cement, for which B. & S. H. Thompson are Canadian sales agents.

The Canadian Rubber Company have been entertaining the jobbers of the country who handle their goods, at the Windsor Hotel in Montreal, for the past week. A feature of the proceedings was an enjoyable banquet. That the visitors will carry home a favorable impression of C. R. goods is assured.

The hockey club of Caverhill, Learmont & Co., Montreal, met last Saturday and reorganized for the season of 1905-06, with the following officers:— Hon. patrons, Geo. Caverhill, J. B. Learmont, T. H. Newman; president, James Reid; vice-presidents, Geo. Goulthorpe, J. W. Dowling, Geo. H. Cornell; secretary-treasurer, Geo. McGowan; committee, A. W. Adams, Geo. A. Jordan, C. T. Chipchase, A. S. Bain, J. W. Richardson.

John Purvis, of Purvis Bros., hardware merchants, Sudbury, Ont., was a guest at the Queen's Hotel, Montreal, this week, and visited many of the firms with whom he does business. Mr. Purvis is one of the pioneer hardware men of Algoma, and is the manager of the Sudbury branch of Purvis Bros., who also have stores at North Bay and Webwood. The North Bay store is managed by Mr. Purvis' brother, while his nephew is in charge of the Webwood branch.

Western Canada.

Messrs. Wiebe & Epp, hardware merchants, Rosthern, Man., have dissolved partnership. The business will in future be carried on by Mr. Epp.

The stock of F. E. Hebden, plumber, Nelson, B.C., valued at $4,500, has been bought out by the plumbing firm of Strachan & Hebden, who will move into new quarters shortly.

R. B. Weeks, of Weeks & Son, plumbers, Vancouver, has been on a business trip to New York. At present the firm has the $11,500 contract for the plumbing in the Chinese and Japanese Detention Building of the Canadian Pacific Railroad.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 74.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Canada Plates have gone up in price.

Pig Lead has advanced to $4.40 to $4.45.

Carron and Clarence Pig Irons are at higher figures.

Merchant Steel has advanced.

Black Sheets are higher this week.

Tin Plates have been advanced.

Terne Plates are quoted at $6.85 base sizes.

Ingot and **Sheet Zinc** have each advanced ¼c.

Turpentine has declined to 93c. and 92c.

Linseed Oil is stronger, being quoted 1 cent higher than last week.

TORONTO.

Galvanized Range Boilers—Prices have fallen slightly.

Iron Pipe—Higher figures are being quoted.

Paris Green—Prices for Spring delivery are now listed.

Mixed Paints—S. W. Paints have been advanced 5c. per gallon.

Pig Iron—Hamilton No. 1 and 2 has advanced 50c.

Ingot Tin—An advance of 1c. per pound has been made.

Ingot Copper is now quoted at $19.

Sheet Copper—Present quotations are $23.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, December 8, 1905.

COUNTRY trade is still rather quiet and the year's business is now about on its last legs. The city departments of local hardware houses, however, are still quite brisk and will no doubt continue so right up to Christmas.

Dealers here report a shortage on cheaper grades of skates, while the smaller sizes of better grades are decidedly scarce. Snowshovels are another line most difficult to obtain at the present time. In fact, this shortage is considered rather serious in some quarters.

The features of this week's changes in prices are all in heavy goods and will be found in our metal market reports.

Axes—This is one of the most active lines at present. The following prices are well maintained. Chopping axes, unhandled, $6.00 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—There is a good movement in nearly all grades. Our quotations are as follows: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Sewing Machines—Trade is lively with prices still at the following figures: Hand-sewing machines, $11 each, net; complete machines, with stand, $18.00 and up, according to quality.

Lanterns—The market in these goods is recovering somewhat from the price war of some months ago. Our prices remain as follows, however. Cold blast, $4.50; No. 0 Safety, $5.00.

Rivets and Burrs—The usual good turnover is still manifest, and, like all hardware staples, they are, even at this season, enjoying a good sale. We quote: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 40 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—We still give the following prices. Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—Orders for these goods are numerous and fairly heavy. We are quoting the following prices: 3-8 and smaller, 60 to 10; 7-16 and larger 55 to 5.

Horse Nails—Being very seasonable goods, horse nails are selling well in all parts of the country. Our prices are: C brand, 40, 10 and 7 1-2 per cent.: M.R.M. Co., 55 per cent.: P.B. brand, 55 per cent

Wire Nails—The holding off of genuine wintry weather and consequent continuance of building operations, has kept demand very steady. We quote from $2.10 to $2.20 per keg, f.o.b., Montreal.

Cut Nails—Trade is rather dead. Prices remain at $2.20 per keg, f.o.b., Montreal.

Horseshoes—These goods are being sold in good quantities. Prices remain as last quoted. P.B. New Pattern, base price, $3.50 per 100 lbs., M.R.M Co. latest improved pattern iron shoes, light and medium pattern No. 2 and larger, $3.65: No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $4, No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60 Toeweight, all sizes, No. 1 to 4, $6.85 Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes, 25c.

Sporting Goods—Local jobbers are still sending out good quantities of rifles and ammunition of all kinds. We give prices: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.. American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred pounds; chilled, $7.00 per hundred pounds; buck and steel, $7.50 per hundred pounds; ball, $8.00 per hundred pounds. We quote discounts 10 per cent. on shot, f.o.b., Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—A quiet trade is reported by local dealers and no exceptional flurry is to be expected until building operations are resumed in the Spring. Prices are as before quoted.

Cement and Firebrick—This is another line which is somewhat inactive at present. We are still quoting: $1.80 to $1.90; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2.00 to $2.10 ex-cars; Canadian Portland, $2.00 to $2.05. Firebrick, English and Scotch, $17.00 to $21.00: American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags, $2.05 in barrels in round lots.

Coil Chain—A good demand is moving these goods in a most satisfactory manner. We are quoting prices as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3.00; 1 inch, $2.95.

Skates—A shortage is reported in the cheaper grades, and in the smaller sizes of better goods. This season's orders have been very large. We quote from 25c. to $2.50, according to quality.

Sleigh Bells—We are still quoting the following prices: Back straps, 30c. to $2.50; body straps, 70c. to $3.50: York Eye bells, common, 70c. to $1.50, pear shape, $1.15 to $2.00; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2.00; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—Our prices are: Jute, unlined, $4.50; 3-4 lined, $9.50; full lined, $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snowshoes—Jobbers are unable to supply the demand for this most popular line. Prices range from $15.00 to $35.00 per dozen pairs, according to quality.

Ontario Hardware Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, December 8, 1905.

JOBBERS report business to be lively, as while most dealers have their holiday stocks in, some general merchants are only now getting their supplies. Holiday goods have the greatest call, of course, but winter lines are

also in fair demand. Some lines of sleds and skates are short and snowshoes are also very scarce.

The steady advances of metals are making all heavy hardware firmer in price, but no changes have been made in our quotations. With metals soaring at this time there is every likelihood of higher prices ruling on all heavy goods next season.

Axes and Handles—Dealers are still buying in fair quantities.

Cutlery and Silverware—Some sorting orders are being filled.

Sporting Goods—Shotguns and ammunition are having a fair sale.

Lawn Mowers—Orders are not being placed so much at present as a month ago, most Fall orders being booked.

Washing Machines—Trade is very active and dealers report increasing sales.

Chain—Cow chain is being included in most orders being placed. Our quotations are: 1-4 inch, $6.50; 5-6 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Manufacturers are busy and prices firm. Our quotations are as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire—Prices are steady and business fair. We still quote: $2.42 1-2 f.o.b. Cleveland.

Barb and Coil Spring Wire—The average business for this season is being done.

Wire Nails—Prices are quite firm, some dealers quoting $2.10 and some $2.15.

Cut Nails—A very satisfactory volume of business is reported. Quotations are: $2.40 per keg f.o.b. Toronto.

Horse Nails—Blacksmiths' orders are very satisfactory and shipments are large.

Horseshoes—Trade continues brisk prices firm. We quote: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7.00. If shipped from factory 15c. less.

Horse Blankets—Business in halters, girths, horse blankets and similar goods is active.

Skates and Sleigh Bells—Sleigh bells and skates are being ordered in large quantities, some lines of skates being scarce.

Screws—The market is very firm with prices unchanged.

Rivets and Burrs—Trade is active with prices very firm.

Bolts and Nuts—Quotations are very strong and business lively.

Cordage—Sorting orders are plentiful. We still quote: Manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 9c.

Cement—Prices are unchanged and trade is seasonable. Our prices are: For carload orders f.o.b. Toronto, Canadian Portland, $1.90 to $2.00; American Portland, $1.90 to $2.00. For small orders ex warehouse, Canadian Portland, $2.10, American Portland, $2.10.

Firebrick— Business is more active. Prices continue as before: English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c.; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—Shipments are heavy and prices continue unchanged.

Hides—The local market has shown a slight inclination to weaken in price. Farmers are hurrying in all available hides, and seeing that quality is only running on usual winter basis, prices have in consequence weakened slightly. Arrivals are coming to hand fairly plentifully, and whilst in some lines there is a little excess supply, in most lines it is found difficult to satisfy demand.

The United States markets continue to develop the weakness mentioned in our last, with but slight influence on Canadian prices.

Wool has opened up firm on European markets. London latest reports denote fair demand and prices unchanged, firm at last closing prices.

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, December 8, 1905.

PHENOMENAL activity has been displayed in almost every branch of the metal trade during the week just closing. As will be seen by consulting our "Week's Markets in Brief" nearly every metal in the list has been soaring again, with an impression existing in the trade that all of them are billed for still further flights.

Sheet metals have been particularly active and we are showing advanced prices in Canada plates, sheet copper, terne plates, tin plates, black sheets and sheet zinc, while galvanized sheets are considered much firmer.

Pig lead is the feature of the week's happenings, a further advance of 10c. per hundred pounds leaving it still very strong. Local jobbers who have been trying to discover logical reasons for the wonderful upward progress of prices in this metal, confess their inability to solve the problem. The present situation is quite contrary to what was expected, as the metal has steadily risen ever since the close of the Jap-Russian war, whereas dealers most closely in touch with the trade expected a slump. Producers whose information has hitherto been quite reliable, state that the present situation is simply the result of a demand which is rapidly exhausting the visible supply.

Although we have not advanced tin and copper, the prevailing impression is that existing prices will soon have to be raised. Indeed, importers state that they could not to-day sell jobbers at prices which would admit of a profit, with the figures we quote. Copper is selling very briskly as it appears that people have been running themselves bare, thinking that prices were inflated and would soon come down. That they failed to gauge the market correctly is shown by the large orders now in the hands of Montreal importers. It is now almost impossible to procure copper in New York for shipment earlier than the middle of January.

Most of the Canadian consumers are now well stocked with pig iron for the Winter's trade, but odd orders are coming in pretty regularly. Quotations are now entirely ex yard, and the advances quoted this week will likely check the upward tendency until inquiries for Spring delivery begin to come in. This is not to be expected for a month or so yet.

Cables from the old country intimate that Scotch boiler tubes are in exceptional demand. Importers here are unable to get anything like prompt deliveries, with the result that they are finding themselves behind in their orders.

Considering everything, the extreme buoyancy of this week's market stamps it as the most active in months and prospects for the near future point to the fact that merchants who have been holding off for closer prices will be badly pinched.

Canada Plates—Advances all around have been made during the past week We are now quoting: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75; galvanized, 52's, $4.10; 60's, $4.35.

Copper—Though no further advances have occurred, the market is decidedly strong. Advices from New York state that copper is very scarce there and dealers are demanding high prices. We quote: Ingot copper, 19 3-4c. to 20c. Sheet copper, base sizes, 25c.

Ingot Tin—There is no sign of a drop in this metal but, on the other hand, local authorities are inclined to the belief that it will go higher. At any rate, the new schedule of prices is being held very firm. Ruling price for ingot tin is 37c. to 37 1-2c. per lb.

Pig Lead—The lead situation is beyond the comprehension of local dealers. At a season when a comparatively small quantity of lead is being used, the price is being boosted up almost daily. We now quote from $4.40 to $4.45 per hundred pounds.

Boiler Tubes—Trade continues normal at unchanged prices. Our quotations are as follows: British and

American tubes, 1 1-2 inch. 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—We quote:

"Dom.," No. 1.	$19.50 to $20.00	delivered	Montreal.
Usual difference in price for lower grades.			
Ferrona No. 1	$19 50	delivered	Montreal.
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.00 to 20.50	"	"
Carron No. 1	23.00	"	"
" (special)	22.00	"	"
Summerlee No. 1	22.50	"	"
Clarence No. 1	20.00	"	"
" No. 3	19.50	"	"

Tool Steel—Our prices are unchanged, being still quoted as follows: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's. 13c.; Jonas & Colver's, 10c. to 20c.; "Air Haradening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed Steel, 60c.

Merchant Steel—Further advances have been made during the past week. and we now give the following prices: Sleigh shoes, $2.17 1-2; tire, $2.27 1-2; spring, $2.75; toecalk, $2.82 1-2; machinery iron finish, $2.22 1-2; ruled machinery steel, $2.75; mild, $2.17 1-2 and upwards; square harrow tooth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

Cold Rolled Shafting—We quote: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch. $3.50 per 100 lbs.

Galvanized Iron—Conditions remain the same as formerly. Added strength is given to our prices by the advances recently made by producers. We quote following prices: Queen's Head, 28 gauge, $4.10; 26 gauge, $3.85; 22 to 24 gauge, $3.60; 16 to 20 gauge, $3.35: Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge. $3.40; Fleur-de-Lis, 28 gauge, $3.85; 26 gauge, $3.60; 22 to 24 gauge, $3.35; 16 to 20 gauge, $3.10; Comet, 28 gauge. $3.85; 26 gauge, $3.60; 22 and 24 gauge. $3.35; 16 to 20 gauge, $3.10; Bell brand, 28 gauge, $4.20 to $4.25; Gorbal's "Best Best," 28 gauge, $4.10, "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots 25c. extra.

Black Sheets—As was predicted in our last issue, local prices have gone up and we now give the following figures: 28 guage, $2.40; 26 guage, $2.35; 22-24 guage, $2.30; 19-20 guage, $2.30; 8-10 guage, $2.45.

Antimony—There is little or no demand for this metal, which is still quoted at a price which will be shaded for quantities. Our price is 14c. to 14 1-2c. for Cookson's.

Tin Plates—Owing to the numerous advances recently made in ingot, prices have been advanced 25c. all around. We quote. Cokes, base size, IC, 14 x 20, $4.00; charcoal, base size, IC, 14 x 20, $4.25.

Terne Plates—To keep pace with the advances in other metals, terne plates have gone up to $6.85.

Ingot Zinc—We are this week quoting higher prices again. This metal is one of the strongest on the market. Our figures are 7c. to 7 1-4c.

Sheet Zinc— Following the lead of spelter, sheets have been commanding higher figures during the past week. Our quotations are: In casks, 8c.; less than casks, 8 1-4c.

Bar Iron—A fine trade is being carried on, and the market is firmly held at $1.97 1-2 f.o.b. Montreal.

Old Material—This has been a quiet week. Demand for scrap metal is unchanged, and stocks continue very scarce. Prices ruling are just about as quoted last week. The market is certainly no weaker and the tendency is decidedly an upward one. We quote: Copper wire, 14 3-4c.; light copper, 13 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 3c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $10; mixed rags, 75c. to 90c. per 100 lbs. old rubbers, 7 1-4c. to 7 1-2c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Decmeber 8, 1905.

HIGH prices in metal markets instead of stopping business are having an opposite effect, the volume of trade being very satisfactory. Ingots are particularly active.

Further advances are made this week on pig lead, ingot tin, ingot and sheet copper and some lines of pig iron. The iron mills are loaded up with orders and the strong condition of the market has encouraged mine owners and coke manufacturers to advance prices. This accounts partially for the increased quotations. Reports from outside markets give some idea of the reasons why other metals continue balloon-chasing. The Toronto markets are governed, of course, by conditions elsewhere.

Pig Iron—Hamilton shows another advance this week, prices of both native and foreign iron being very firm. We quote:

Middlesboro, f.o.b., Toronto		$22 50
Hamilton, No. 1, at furnace		20 00
" No. 2, "		19 50
Midland, No. 1, "		20 00
" No. 2, "		19 50
Radnor, at furnace		31 50
Londonderry, f.o.b. Toronto		21 50

Bar Iron—Business continues lively with prices increasingly firm. We quote as follows: $2.00 base, f.o.b. Toronto. with discount of 2 per cent. net cash.

Ingot Tin—The market is very active and an advance of 1 cent is reported. We are now quoting 38c.

Tin Plates— Demand is active with prices very firm.

Galvanized Sheets—Prices are firm in the outside markets, the demand continuing active locally.

Brass— Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—Still another advance in pig lead has been made, this time the rise being 15c. We now quote the following prices. Pig lead, $4.50 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—The market continues active with prices unchanged. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—Both ingot and sheet copper has been advanced owing to outside increases. We quote as follows: Ingot copper, $19.00 per 100 lbs., and sheet copper, $23.00 per 100 lbs.

Antimony—Demand continues fair, with stocks in hand light.

Old Material—The high price for new metals is creating a better demand for old material and prices are strengthening. Dealers' buying prices as follows: Heavy copper and wire , 13c. per lb.; light copper, 12c. per lb.; heavy red brass, 11 1-2c. per lb.; heavy yellow brass, 9c. per lb.; light brass, 7 1-2c. per lb.; tea lead, $2.40 per 100 lbs.; heavy lead, $2.75 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $8 to $8.50, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 7c. to 7 1-4c. per lb.; country mixed rags, 75c. per 100 lbs.

Coal—No change is reported, prices being steady. We quote: Anthracite in cars at bridges, grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N.P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, December 7, 1905.

WHILE there is less excitement in the iron and steel trades, the volume of work coming out continues extremely heavy. No better indication of this could be furnished than by the fact that the bookings of the United States Steel Corporation during November were slightly above 51,000 tons per day, as compared with a little more than 50,000 tons in October. When it is considered that an even much larger tonnage was booked in September, the record month, and that the daily capacity of the works of the corporation is 34,000 tons, the volume of current consumption will be appreciated.

Rail makers again report heavy orders. The St. Paul road has called for the first installment for its Pacific coast extension, the quantity involved being 60,000 tons, which will be rolled in the central west in the Winter, to be forwarded by sea to the coast. The first installment of the Baltimore & Ohio order, involving 25,000 tons out of an estimated total of 75,000, has been given to the mills.

The leading interest has just closed for 25,000 tons for South America and 6,000 tons for Australia.

Prices of light rails have been again

advanced $1 per ton and are thus getting more in line with the standard sections.

Some heavy work is coming to the structural mills. The Pennsylvania Railroad is calling for bids for 22,000 tons for that part of the New York depot which will be above the street level, although the material may not be actually used in 18 months. The company is now storing in New Jersey at the rate of 2,500 tons a month the material ordered some time since for the work below the street level. It is expected, too, that the New York Central road will at an early date come forward with requirements of somewhere between 15,000 and 20,000 tons for the new terminal station. A good deal of bridge work and of material for large buildings is in sight in different parts of the country.

It is estimated that there have been contracted for thus far about 50,000 tons of foreign structural material, which includes some sales of Belgian mills. The bulk, as already announced, has been taken by the German Steel Syndicate. Reports of a concerted movement abroad to advance prices in beams are not confirmed here.

There have been some further large contracts for rolling stock and the report is current that one of the large systems has been forced to turn to foreign makers for equipment in order to get reasonable delivery.

Comparatively few large sales of pig iron are reported. The Steel Corporation has purchased 15,000 tons more for the Pencoyd works, and in the Chicago market a sale of 12,500 tons of malleable bessemer pig was effected. The market for all grades of pig iron is hardening.

Furnacemen have bought heavily of lake ores for the next season and some large purchases of foreign ores have been effected.

In the wire trade the feeling is growing that there may be an advance before the close of the year.

LONDON METAL MARKETS.

From Metal Market Report, December 6, 1905.

Pig Iron— Cleveland warrants are quoted at 53s., and Glasgow Standard warrants at 52s., making prices as compared with last week 4 1-2d higher for Cleveland warrants and 5d higher for Standard warrants.

Tin—Spot tin opened firm at £160 10s., futures at £157 10s., and after sales of 140 tons of spot and 120 tons of futures closed firm at £160 15s. for spot and £157 17s. for futures, making price as compared with last week, £4 12s. 6d higher on spot and £2 5s. higher on futures.

Copper—Spot copper opened firm at £77 5s., futures £76 15s., and after sales of 300 tons of spot and 600 tons of futures closed firm at £77 17s. 6d for spot and £77 2s. 6d for futures, making prices as compared with last week 2s. 6d higher on spot and unchanged on futures.

Lead—The market closed at £17 making price as compared with last week £1 higher.

Spelter—The market closed at £28 12s. 6d, making price as compared with last week unchanged.

Nova Scotia Trade News.

Halifax, N.S., Dec. 6.

THE Fall hardware trade is reported to be exceptionally good. The recent cold snap has caused a boom in some lines, particularly in skates. Several large orders have been received for skates, and the dealers are kept pretty busy.

* * *

The high tendency in the price of all metals continues. Quotations here for iron pipe are: ½-inch, per hundred pounds, $3; ¾-inch, $3.50; 1-inch, $5.05; 1¼-inch, $6.85; 1½-inch, $8.25; 2-inch, $11.

Sheet zinc by the cask is quoted at 8 cents, and 8½ cents for lesser quantities. Black sheet iron is quoted at $2.25, and galvanized at $3.75 to $4.

Lead pipe is $5.25 per hundred pounds.

Bar iron is quoted from $2.10 to $2.20 base.

Glass is very scarce on this market, and the price is high. It is quoted at $2 per box of 50s first break, and $3.50 for 100s first break.

Lumbermen's supplies continue in good demand, and there have been quite a few sales of roofing materials, etc.

Collections are fully up to the average, and the jobbers are much impressed with the present trade outlook.

* * *

The Coxheath copper areas in Cape Breton will probably be developed on a large scale. Major G. M. Irvine and J. S. Morris, two American experts, are now in Cape Breton in consultation with Colonel Granger about the property. If satisfactory arrangements can be made it is the intention to sink the present shaft to a further depth of one hundred feet. In an interview with Premier Murray these gentlemen suggested that the same consideration should be given copper mining in Nova Scotia that is given to gold mining. The premier assured them that any requests in this direction would receive careful consideration of the Government of Nova Scotia.

* * *

Owing to the increase of business and growing importance of Montreal as a centre for distribution of their products the Robb Engineering Company, of Amherst, have decided to change their agency at Montreal into a branch office. Mr. Watson Jack has been appointed manager, and Mr. Alister Maclean will continue in the capacity of engineer for the Montreal district. The Robb Engineering Company will have their quarters in the handsome suite of offices occupied by Watson Jack & Company in the Bell Telephone building, corner of Notre Dame and St. John streets.

New Brunswick Trade News

St. John, N.B., Dec. 4, 1905.

"NEW industries" has been the cry in certain quarters in St. John of late. The agitation for new industrial establishments here is, of course, deserving of support and it would seem as if already there is excellent possibility of another important establishment making its appearance here before long. When the Hartford capitalists secured the controlling interest in the Maritime Nail Works it was rumored that the manager of the works would sever his connection with the concern. Mr. Eben Perkins, the gentleman referred to, is still in the position of manager, but the report is gaining ground that he will shortly leave the Maritime and become associated with gentlemen who are to form a company to build and operate nail works. Mr. Perkins is uncommunicative in reference to the matter, but the report will probably be found to have some basis. There is the possibility that the works if built will not be located here but that possibility is thought to be decidedly remote. Mr. Perkins, though a native of the United States, has been connected with the Maritime Company since its organization in 1896.

* * *

The striking feature of the local hardware market of late has been the firmness in metal prices. Without exception metals of all sorts have been decidedly firm in price. Pig lead is still tending upward, the last advance having been one of fifteen cents. Copper is also still firm in its quotations; pig iron is firm; bar iron is advancing. Steel is showing an upward trend. Many dealers are looking for further advances in metal prices to come into effect ere long. The demand continues good in the case of nearly all, if not all, the metals offered.

* * *

As previously noted the outlook for wire nails in this part of the Dominion is for higher prices. The manufacturers are making their advances and jobbers must necessarily follow suit. The advances made by jobbers so far, however, have been somewhat irregular. In some cases the increase in price has been about five cents, in other cases an increase of about double that figure has been the order.

* * *

The supply of glass on the market is reported to be none too large. Neither is there much of this article being brought into the province at present, so the situation is not of the best.

* * *

Builders' materials continue in good demand. The prices asked are about of the average variety. In some provincial towns there has been something of a building boom this year and the demand for builders' materials has been quickened in that way.

* * *

Lubricating oils are selling well. The market is firm. Linseed is unchanged in quotation. Turpentine has been dropping somewhat but some dealers are looking for advances.

SAMUEL, BENJAMIN CO. MOVE.

Messrs. M. & L. Samuel, Benjamin & Co., Toronto, have removed their offices from the Temple Building to the new Gage building on Front street west near the Queen's Hotel. The new quarters are very convenient and suitable for trade in heavy goods and the company will have ample room on the first floor and in the basement. Since the fire in April, 1904, their offices and warehouses have been separated, but the new move will allow of their being reunited.

While some merchants are thinking out the details of an elaborate design, other dealers are fixing up a display that makes no pretensions, but draws attention and sells goods.

IN THE LEAD!

In the **prompt** shipping of

Plate Glass

it is a well-established fact that we have constantly been in advance. The demand for our Plate is evidence that our efforts have been appreciated and has been such that to-day we have the **largest stock** and **plant** for handling same in Western Canada.

Quotations for Plate delivery sound at your station by wire or mail on receipt of specification.

G. F. STEPHENS & CO.
LIMITED
WINNIPEG, CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Dec. 8, 1905.)
Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

BUSINESS in nearly all lines of general hardware continues very brisk, the cold weather having given a marked impetus to trade. Values are steady this week and there are no quotable changes of importance.

Game Traps—Still in some demand at following unchanged quotations.

H. & N., discount	50 and 5 p.c.
Victor, "	66⅔ p.c.
Newhouse, "	35 p.c.
Bear	$7 each

Lanterns—As noted last week, while there is an "open" market in lanterns, the general run of prices has been advancing and the prices quoted are about as follows:

Cold blast lanterns	$5 25 per doz.
Coppered cold blast lanterns	7 25 "
Cold blast dash "	7 75 "
Lift Lanterns	4 25 "

Bluestone—Price for 1906 delivery is $5.75 per cwt.

Wire—Prices are steady. We quote:

Barbed wire, 100 lb	$3 00
Plain galvanized, 6 to 8	3 39
" 9 2 50	2 90
Plain galvanized, 10	3 50
" 12	3 10
" 13	3 20
" 14	3 90
" 15	4 45
" 16	4 60
Plain twist	3 00
Staples	3 50
Oiled annealed wire, 10	2 96
" 11	3 02
" 12	3 10
" 13	3 20
Oiled annealed wire 14	3 30
" 15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—Prices have been steady since the recent advance in steel shoes. Quotations are as follows:

Horseshoes, iron, No. 0 to No 1	$4 65
No. 2 and larger	4 40
Snow shoes, No. 0 to No. 1	4 90
No. 2 and larger	4 65
Steel, No. 0 to No. 1	5 00
No. 2 and larger	4 75

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—The price has been steady since the recent decline to $2.60 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Pressed Spikes—Prices are quoted as follows since the recent advance:

Pressed spikes, ¼ x 5 and 6	$4 60
" " 5-6 x 5, 6 and 7	4 25
" " ⅜ x 6, 7 and 8	4 10
" " 7-16 x 7 and 9	4 00
" " ½ x 8, 9, 10 and 12	3 90
" " ⅝ x 10 and 12	3 75

Screws—No change in price. Demand continues brisk at following unchanged discounts:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged. We quote:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—Unchanged in price. We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.20
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discounts are now 60 and 5 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g.hickory, doz.	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—Prices are quoted as follows:

Bench axes, discount off list	40 p.c.
Broad " " "	25 p.c.
Royal Oak, per doz	$ 6.25
Maple Leaf, "	8.25
Model "	8.50
Black Prince "	7.25
Black Diamond "	9.25
Standard Flint Edge, per doz	8.75
Copper King, per doz	9.00
Columbian, "	10.75
Handled axes, North Star, per doz	7.75
" " Black Prince, per doz	9.25
" " Standard Flint Edge, per doz	10.50
" " Copper King, per doz	11.00

Butts—The discount on wrought iron butts is 70 per cent.

Churns—The discounts from list prices are 45 and 5 per cent.

Chisels—Quoted at 70 per cent. off list prices.

Auger Bits— Discount on common auger bits is 65 per cent.

Blocks—Discount on steel blocks is 35 per cent. off list prices; on wood, 55 per cent.

Fittings—Discounts are quoted as follows:

Wrought Couplings	60 p.c.
Nipples	65 and 10 p.c.
T's and elbows	10 p.c.
Malleable bushings	50 p.c.
Malleable unions	60 p.c.

Grindstones—The price is now 1 3-4c. per lb.

Fork Handles—The discount is 40 per cent. from list prices.

Hinges— The discount in light "T" and strap hinges is 65 per cent. off list prices.

Hooks—Prices are quoted as follows:

Brush hooks, heavy, per doz.....$8.75
Grass " per doz..... 1.70

Draw Knives—The discount is 70 per cent. from list prices.

Rules—Discounts are 50 and 10 per cent.

Washers—On small quantities the discount is 35 per cent.; on full boxes it is 40 per cent.

Wringers—Selling at following prices:

Royal Canadian, per doz..... $30.05
R. B., per doz..... 34.07

Files—Discounts are quoted as follows:

" Arcade " ..... 75 p.c.
" Black Diamond " ..... 60 p.c.
" Nicholson's " ..... 62½ p.c.

Building Paper—There is a steady demand for all lines at firm prices. We quote:

Joliette, plain	40c.
" tarred	65c.
Cyclone, plain	55c.
" tarred	80c.
Anchor, plain	55c.
" tarred	65c.
Pure fibre, plain	60c.
" " tarred	80c.

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned..... 70 and 10 p.c.
" " plain..... 75 and 2½ p.c.
" pieced..... 30 p.c.
Japanned ware.....37½ p.c.
Enamelled ware, white..... 45 p.c.
" Famous..... 50 p.c.
" Imperial.....50 and 10 p.c.

Cordage—The price is steady since the recent advance. We quote as follows.

Rope, sisal, 7-10 and larger, basis..... 11 25
Manila, 7-16 and larger, basis..... 15 75
Lathyarn..... 11 25

Solder—Quoted now at 21c. per lb. with concessions for large quantities.

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.

(Lengths 3, 4, 5 and 8 ft.)

	Painted	Galvanized
28 gauge	$2 85	$3 90
26 "	3 10	4 15
24 "	3 80	5 40

(Any lengths under 4 ft. 10c. per square additional.)

	Painted	Galvanized
28 gauge pressed seam	$3 00	$4 20
28 " "V" crimp	2 95	4 15

SIDINGS.

(Plain brick, rock face brick or stone 17¼ x 23.)

	Painted	Galvanized
No. 1 78 to the square	$3 00	$4 30
" 2 69 " "	2 75	3 90
" 3 55 " "	2 40	3 60

(Large sheets 28 in. x 60 in.)

	Painted	Galvanized
28 gauge	$3 00	$4 05

BEADED CEILING.

28 gauge, painted red 3 10

Vises—Prices are quoted as follows:

" Peter Wright," 30 to 34 .....14½c. per lb.
" " 35 to 39 .....14c. "
" " 40 and larger .....13½c. "

Anvils—"Peter Wright" anvils are selling at 11c. per lb.

Power Horse Clippers—The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6. The "1904" sheep shearing machines are sold at $13.60.

Iron and Steel—Prices are quoted as follows:

Bar iron (basis)	2 60
Swedish iron (basis)	4 75
Sleigh shoe steel	2 75
Spring steel	3 25
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	13 00

Black Sheets—No change in price. We quote as before:

Black Sheets, 10 to 16 gauge, 100 lb	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Iron—The market is steady at the recent advance. We quote:

Apollo, 16 gauge	3 90
18 and 20 gauge	4 10
22 and 24 gauge	4 45
26 gauge	4 40
28 gauge	4 65
30 gauge or 10¾ oz	4 95
Queen's Head, 24 gauge	4 60
26 gauge	4 65
28 "	4 90

Tin Plates—XXI plates have been advanced 50 cents. We now quote as follows:

Tinplate, IC charcoal, 20 x 28, box	9 50
" IX "	11 50
" XXI "	13 50

Terne Plates—Quoted at $9.00.

Canada Plates—The price has advanced 25c. per box. We quote:

Canada plate, 18 x 21, 18 x 24	3 50
Canada plate, 20 x 28	3 75
Canada plate, full polished	25

Sheet Zinc—The price is now $8.50 for cask lots, and $9.00 for broken lots.

Pig Lead—The price has been advanced to $4.75 per 100 lbs.

Iron Pipe—Prices are steady at the recent advance. We quote:

Black iron pipe, ⅛ inch	
" ¼ "	2 55

Black iron pipe, ¼ inch		2 85
" ⅜ "		3 15
" ½ "		4 00
" 1 "		5 75
" 1¼ "		7 85
" 1½ "		9 40
" 2 "		12 90

Petroleum and Gasoline— Prices are quoted now as follows:

Silver Star, per gal	21c. ½
Sunlight "	22½c.
Eocene "	24½c.
Pennoline "	25½c.
Crystal Spray "	24½c.
Silver Light	22½c.
Gasoline, 70-72 (Engine)	25c.

(In barrels f.o.b. Winnipeg.)

Paints and Turpentine—Business is brisk in general lines. We quote as follows:

White lead (pure)	$7 00
Bladder putty, in bbls	0 02½
" " in kegs	0 02¾
Turpentine, pure, in barrels	1 04
Less than barrel lots	1 09
Linseed oil, raw	0 57
Boiled	0 60

Window Glass—We quote:

16-oz. O.G., single, in 50-ft. boxes—

16 to 25 united inches	$2.05
26 to 40 "	2.20

16-oz. O.G., single, in 100-ft. cases—

16 to 25 united inches	3.75
26 to 40 "	4.25
41 to 50 "	4.75
51 to 60 "	5.25

British Columbia Trade News

ANOTHER new industry that will give employment to a large number of hands is now being established in Vancouver, and will be in full running order in a few weeks. At an expenditure of nearly $50,000 a new can factory and sheet metal works is being installed by the A. M. Forbes Hardware Company in a large new factory on Seymour street, which is now receiving its finishing touches. The factory is a commodious four-storey frame building, located on the west side of Seymour street.

An extensive equipment of machinery for the manufacture of all kinds of cans has been purchased. The machinery, which will cost over $10,000, is all of the most modern type, and is being manufactured entirely by British Columbia machinery firms. Everything is being arranged on the gravity principle, and when all the machinery is installed and the factory working at its full capacity about twenty-five thousand cans a day will be turned out if needed.

The ground floor of the new factory will be devoted to one of the largest tin and sheet metal works in the province, giving steady employment to about twenty-five hands. The second floor will be devoted to a cornice and roofing establishment, also employing a considerable number of hands, while the can factory, when in full swing on the large orders which the firm has already booked, will give employment to about fifty skilled canmakers. Altogether nearly a hundred men will be engaged in this new industry. This factory is an entirely separate institution from the firm's business on Hastings street.

The president of the company is Mr. A. M. Forbes. The vice-president, Mr. H. Morrison, will have charge of the cornice, roofing and sheet metal departments. Mr. C. J. Marshall, formerly foreman for the Automatic Can Company of New Westminster, has accepted the position of manager of the can factory, while Mr. F. W. Crawford will be mechanical superintendent. The industry is expected to reach important proportions in a short time, as there is a growing demand for suitable cans for goods to be sent to China, Japan, Hawaii and Australian points.

DEATH OF F. W. MORSE.

THE sudden death of Mr. F. W. Morse, vice-president of the Miller-Morse Hardware Co., came as a great shock to the business public of Winnipeg on Wednesday, November 29. So utterly unexpected was the news that it was almost impossible for business men in Winnipeg to realize the truth of the sad news that spread so rapidly through the city. On the day before, Mr. Morse had been apparently as strong and well as usual and he was actively engaged in his office. A man in the prime of life, the embodiment apparently of health and manly vigor, his death came as a bolt from the sky to his business colleagues.

The late Fred W. Morse, Winnipeg.

Mr. Morse was a man of quiet, retiring disposition, but very popular throughout the city of Winnipeg for his many sterling qualities. Genial, kindly and companionable, he had in a marked degree the respect and affection of the entire staff of the Miller-Morse Hardware Company, with whom he had the most intimate relations, and with the hardware trade of the west, among whom his name stood for courtesy and fair dealing.

In many respects Mr. Morse's career in the west is an inspiration to the ambitious young man who hopes to make for himself a business career of importance in the newer Canada. Coming to Winnipeg in 1882 in the boom days, he soon became engaged in the retail hardware business. He and Mr. Hyman Miller entered into partnership, establishing the retail hardware firm of Miller, Morse & Co. The young firm survived the collapse of the boom and as both partners were possessed of striking executive ability the business grew and the retail firm developed into one of the leading wholesale hardware firms of the west.

Both Mr. Miller and Mr. Morse were connected with the firm of M. L. Samuel Company, Toronto, before going west, the former as traveler and the latter as a clerk. Mr. Morse made friends with all who did business or associated with him and these qualities went a long way towards his success as a business man. In Toronto his old time friends watched his progress in the west with keen interest and satisfaction, while in the west there were few in the hardware trade who did not know him and appreciate him as a friend. After giving up the road he devoted his time almost exclusively to the development of the Winnipeg business, always making it a point, however, to make things pleasant for out of town visitors. His close attention to business undoubtedly hurried his early death.

In January last the Miller-Morse Hardware Company was incorporated, Mr. Morse being vice-president. At the same time the firm moved into their magnificent new warehouse, one of the largest of its kind in Canada. Mr. Morse was only 45 years of age and a brilliant business career seemed to be before him. His loss is sincerely mourned by all his business associates and his wide circle of social friends. Hardware and Metal begs to extend sincere sympathy to Mrs. Morse and to Mr. Miller, who for so many years has been in partnership with the deceased.

BUSINESS CHANGES.

Ontario.

J. A. Dupuis, tinsmith, Chrysler, has assigned to G. I. Gogo, Cornwall.

Bragg & O'Neil, agricultural implements, Chatham, have dissolved. Bragg will continue the business.

Hunt Bros., plumbers, London, have been succeeded by F. C. Hunt Plumbing Company.

The assets of O'Connor & Wilson, hardware merchants, Ottawa, are to be sold at auction on the 12th.

Quebec.

A demand of assignment has been made on Galarneau, plumbers and roofers, Montreal.

New Brunswick.

P. Campbell & Co., plumbers, St. John, have lost by fire to the extent of $300. They were insured.

MacKenzie & Mann are said to contemplate the purchase of a fleet of ice-breaking car ferries to keep navigation open on Lake Superior during the Winter months from Port Arthur to the Soo. By taking over the Manitoulin & North Shore Railway, one of the Clergue enterprises, the Canadian Northern would then have an almost direct line from Edmonton to Ottawa.

CANADA'S METAL INDUSTRIES.

THE Dominion Iron & Steel Co. has chartered the big Swedish steamer Drottning Sophia to engage in next season's iron ore trade from Wabana, Newfoundland.

The White Bear Mine at Rossland is installing 400 horse-power electrical motor.

Machinery worth $15,000 is being installed at the Mackenzie & Mann iron mines at Atikokan.

Cambrian Mineral Co. is being organized for the purpose of erecting a smelter at Sudbury. The capital stock will be $100,000.

The open hearth steel furnace of the Dominion Iron & Steel Co. created a record one day last week, when the batter turned out 902 tons in twnety-four hours.

Canadian manufacturers are said to be inquiring in the English markets for supplies of steel strips for tube making, claiming that they are not able to obtain sufficient supplies of this material in America.

The Canadian Smelting Works at Trail has blown in its fourth copper furnace, this giving the plant a capacity of 1,000 tons of copper per day. The lead refinery is turning out 50 tons of pig lead daily.

The rail mill of the Dominion Iron & Steel Company is again in operation, having undergone temporary repairs. A new engine head, which has been ordered from Cleveland, Ohio, will be in Sydney in a few days.

Fire did considerable damage to the Granby Mining Company's crusher building at Phoenix, B.C., last Friday night. Arrangements have been made to ship from the old bins at Ironside until the crusher plant and buildings are reconstructed.

A company to be capitalized at $4,500,000 is to be organized with headquarters at Dawson City, to install a gigantic hydraulic system for operating on the creeks tributary to Dawson. This is the largest mining proposition yet in the Klondike.

A copper smelter is to be established at Bruce Mines to treat the ores from the property recently purchased by the English syndicate. It is said that the syndicate will employ 500 men and endeavor to develop the Bruce Mines so that an output of 500 tons of copper per day will be possible.

There are now fifteen members on the Granby board of directors, those newly elected being George Crawford Clark, Sanford H. Steel, and Edwin Thorne. Application has been made to the Legislative Assembly of British Columbia to change the par value of the stock from $10 to $100 a share, thus reducing the number of shares. A dividend of 3 per cent. has been declared on the capital stock out of the net earnings.

PROGRESSIVE RETAILING

THE COUNTRY STOREKEEPER AND COLLECTIONS.

A WHOLESALE merchant was heard to say recently "It is surprising the number of failures among the country traders, and the excuse they each have is that they have so much trusted out that they cannot go along and do business. The trouble is, they do not manage things in the right way. Why, when I kept a country store I trusted everybody I knew. My motto was, 'Trust anybody and everybody, but be sure and look after them,' and when I sold out after a career of fifteen years in that store, I collected in all but about $750, an average loss of only $50, by reason of bad debts."

The Advantage of System.

With the competition among traveling salesmen now-a-days it is an easy matter for a merchant to buy goods as low as his competitors without giving time to study the market reports as he should; and clerks capable of waiting on customers can be engaged in almost any locality at reasonable wages. A merchant, therefore, carrying on business in the country should have his business so systemized that he can devote a part of each day to examining accounts.

The Accounts Should be Watched.

He should learn who, if any, are living beyond their means, if such a condition exists, call a halt on that customer. If such a man has got through working for Mr. Jones learn why he has not been around with part of his wages to pay on his account.

If Mr. Johnson has sold a beef critter find out when he will make a payment on his bill.

If there are any accounts that have been standing longer than it seems necessary, he should make a list of them, take his team, go out around them, and in a courteous way encourage them to call and pay something. The merchant should make the affairs of his customers his affairs, and by keeping in close touch with them he will better be prepared to keep pace with them in the matter of doing business with them.

A Serious Problem.

The success of a merchant is not reckoned by the amount of goods he sells, but by the amount of money he receives for them. And that all depends upon the manner in which he looks after his collections.

Many country merchants fret and worry about how they are going to meet their obligations. They are in debt. Their creditors have been patient, but have now become restless, and the outlok of the future seems gloomy. They have no ready funds with which to satisfy accumulating demands, and yet they have a vast amount of money due them from delinquents and careless debtors. A melancholy spirit has asserted itself, and these merchants are in a sense blind to the situation, and the possibilities of their circumstances.

The Remedy.

What is the remedy for such a condition Assign for the benefit of creditors and settle on a percentage basis? No.

Go out of business and call it a commercial failure? No.

What then should be done? Simply give some persistent effort to ascertain the name and residence of each debtor, and make an active collection campaign

About a Horse Nail.

"A little neglect may breed great mischief; for want of a Nail the shoe was lost; for want of a shoe the Rider was lost—being overtaken and slain by the Enemy—all for want of care about a Horse-Shoe Nail."
—Benjamin Franklin, 1758

A few words about ourselves and our "C" brand horse nails.

This Company was established in 1865, and we have therefore been manufacturing horse-shoe nails for 39 years. We make nothing else, and are the largest producers of horse nails in Canada.

Our "C" brand horse nails are of one quality only—the best that our long experience can produce. We use for their manufacture exclusively a special quality of material, made for our purpose in Sweden, which is the best procurable in the world, or used by any maker of horse nails.

We use the old and well-tried hot forged process, by which the nails are thoroughly forged by special machines from the nail rods at a white heat, and finished and pointed by a mechanical process used only by us in Canada.

Every nail is hand sorted and examined, to prevent any imperfect nails from entering a box bearing our "C" brand. Every box is therefore warranted perfect and ready for immediate use.

Our nails are of the best designs and proportions for Canadian use. They will drive easiest, and stand more hard usage than any other horse nail made or sold elsewhere.

We solicit your kind preference for the "C" brand horse nails when ordering.

We shall be glad to furnish free samples of our various patterns to farriers or dealers.

CANADA HORSE NAIL COMPANY, MONTREAL

and the result will be, no matter how poor a lot of accounts they may have, that in a very short time an amount will be secured that will, when divided among the creditors, keep them quiet until a second collection campaign is made, and in that way relief will come.

The trouble with the average merchant is that he lays down without realizing that it is possible for him to settle his own affairs without the assistance of an assignee.

He should make a hustle himself, and when he cannot succeed in getting good results, he then should employ the services of a reliable, active and aggressive collection agency.

Make a new beginning and in future give accounts and collections as much attention as is devoted to the sale of goods. Allow no more stale accounts to accumulate.

The Future.

When a merchant has met with bitter experience by trusting out his goods until his available resources were apparently exhausted, and has had to make an extra effort to collect in his accounts in order to hold himself together, shall he then shut down, and say that he is not going to trust any more? No, if he should do that he could not carry on business.

The trouble has been the merchant gave his attention to the sale of goods and attending to the wants of his patrons, and neglected the collection end of his business.

Almost every country storekeeper is really compelled to trust his patrons. Farmers get trusted from Spring until the crop is gathered. The lumberman gets trusted for his supplies until his logs are landed. And the laborer gets trusted until "pay day."

All are honest and intend to pay. But the merchants get careless, and the customer uses his money to pay instalments on pianos, machinery and fancy and needless rigs.

The Storekeeper's Independence.

The country merchant is the most independent business man in the list, if he gives proper attention to the right branch of his business. He usually has farmers for patrons, and while their accounts usually run from crop to crop, there is no time in the year but what they have produce—butter, beef, wood, honey, wool, fruit or something to carry in on account. Sometimes it becomes necessary, even with the farmers, for the merchant to offer a suggestion about a check on running up large accounts, to caution him about getting in debt for farm machinery, and to place him on his guard about giving too many notes to instalment men that infest every rural community. Then it is the successful country merchant who is interested in the welfare of each one of his customers, who drives out among them frequently, who keeps tab on each man's affairs, and who does not leave the collections all to the overworked bookkeeper.

Yes, the merchant that adopts a systematic way of governing the collection branch of his business, and makes himself the main character of the system usually wins out and has money to loan "on farm mortgages."

KOPAL

Sherwin-Williams Kopal is the leader in a long line of varnishes approved and used constantly by master decorators and wood finishers all over the Dominion. As a general varnish for outside and inside work it is unexcelled at anywhere near the price. In profit to the dealer and satisfaction to the painter Kopal has not an equal. It is handled by Sherwin-Williams Agents only.

Into Kopal we put only the purest selected materials; our processes are the most careful, and our workmen intelligent men who have made good varnish all their lives.

Our facilities enable us to save much in the cost of manufacture and make our agency a good paying proposition in every locality.

ENGLISH TRADESMEN AWAKE.

Several phases of social revolution are noticeable in England. The latest is the revolt of the tradesmen, or the wealthy middle class, against the demands of the nobility for extended credit.

The recent introduction of American methods by several Oxford and Bond street dealers has shown, by a contrast in prices, the evils of the arbitrary credit methods. The result is that an anti-credit league is forming, and the Countesses and Duchesses who have been accustomed to order what they pleased and pay when they got ready are getting the cold shoulder in the largest shops of the British metropolis.

In recent bankruptcy proceedings the failure was shown to be due wholly to abuse of the credit system which the proprietors had not been able to check. Some accounts were 14 years overdue, but, strangely, were regarded as "good." Lately the London tradesmen have awakened to the fact that they are practically financing the establishments of many of the richest families among the nobility. They are borrowing money to carry on business, while their noble debtors are receiving interest upon money in bank that really belongs to the shopkeepers.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

Fairbanks' 1906 Catalogue.

THE Canadian Fairbanks Co., Montreal, are about to issue a large calendar suitable for hanging on the office or mill wall. They will mail a copy free to any reader who mentions this paper in a letter of inquiry addressed to the advertising department of the above company, 444 St. John street, Montreal.

Engine Products.

The Cooley General Development Co., 620 Atlantic avenue, Boston, have issued a neat little catalogue giving general information relative to their engine products. The catalogue is printed on pink paper, the illustrations being very clear and the reading matter terse and to the point. Readers who desire to secure a copy can do so by mentioning this paper in a letter of inquiry.

Metal Tubing.

James Booth & Co., Birmingham, Eng., have forwarded Hardware and Metal a copy of their illustrated catalogue showing a selection of shaped and ornamental brass and copper tubes, as well as angles, moulding, beadings and rods of various sections in brass and copper. The catalogue contains several hundred illustrations printed in gold and other colors, and is designed to give interested parties a practical idea of the different shapes and ornamentations produced by the Booth Co. There is a growing demand for these products in Canada and the company offers to forward their catalogue and list to any brass founder or other manufacturer who mentions Hardware and Metal in their letter inquiring for the articles mentioned.

A Striking Calendar.

Calendars for 1906 will be numerous and it is only those which are to be found useful and artistic are likely to receive attention, it being the old story of "the survival of the fittest." The Canada Paint Co., Limited, are issuing a very handsome one, which, from an artistic point of view, is a gem and will be admired by all lovers of genuine merit. The sketch is original and by one of the foremost Canadian artists. It shows a sailor painting the side of an Atlantic liner. Hardware and Metal thanks the Canada Paint Co. for an advance copy. Dealers desiring a copy should mention this paper.

Rivets and Eyelets.

Edwin B. Stinson & Son, 31 Spruce street, New York, have forwarded Hardware and Metal several cards and folders illustrating and describing their rivets, eyelets and machines for attaching these articles on canvas and other materials. Cuts showing the Duplex and Star punching machines, automatic eyeletters and perforating guides, give users of these goods a practical idea of the workings of the machines made. Any person mentioning Hardware and Metal can secure copies of cards and folders.

THE HEALTH FAD.

"TRADE'S been sort of slack the past few weeks," said the hardware merchant as the "regular sitter" made his appearance, "and I've been amusing myself by figuring up what I ought to do to reduce my flesh, straighten my back and be perfectly well physically and sound mentally and happy generally. In the morning I drink no water. I eat fruit and a light cereal, and move my arms briskly. I also drink two quarts of water to cleanse the system, eat a hearty breakfast and let my arms hang limp at my sides. At noon, luncheon consists of a clear soup, rare meat without fat, no vegetables and a wineglass of wine and water, and it likewise consists of any kind of meat, as many vegetables as I fancy and two bottles of beer. For dinner I take a walk, one vegetable and one small portion of meat with no liquid, according to one doctor, and according to another authority I cut out the walk and take six courses. Going to bed I sleep with my head low on a single pillow, and I sleep with it high, propped up with several pillows to relax the muscles and take the strain off the neck. I close the windows to keep out the night air, and after that I open them and remove the side of the house to let it in. This giving advice with a view to building up and preserving the constitution has got to be a fad in most of the newspapers and all the magazines, and I know it must be fool advice because it is contradictory. Now I couldn't do all those things; and if I could do them and did do them I couldn't keep store because I wouldn't have time. Seeing that I have been tolerably comfortable for a good spell of sixty-two years, I've no notion of doing any of them."

IMPORTANT TO BABBITT USERS.

Babbitt users will be interested in the announcement in this issue of the Canada Smelting Works, Montreal, who state that they will manufacture babbitt according to the formula of any of the large users. That is, so far as the Canadian trade is concerned, an innovation, and no doubt will meet with due appreciation. Mr. McClure, the managing director, has had many years' experience in the actual manufacture of metal and he is getting after the trade all over Canada with a celerity that has made successes for other firms and should operate similarly for himself.

Beware of the statement, "Selling below cost." The vital question to the customer is what it costs him, not what you lose. He knows you are not in the business for fun, and if you are continually admitting that you are selling below cost, he is likely to conclude that either you do not know your business well enough to buy right, or that you are deceiving him. In either case his confidence in you is shaken. Better say, "We bought them right, you get the benefit."

POINTERS FOR THE INDUSTRIOUS

GENIUS WASTED IN IDLENESS.

THIS is a story of a young man who had real ability and never exerted himself to put it to good use. There can be no doubt, writes Norman Morris, that Adair was a genius. He could write. He began as a reporter on a country newspaper. He wanted to get to a city. The fact that Adair did make a decided impression, and that within a year after his advent as a metropolitan newspaper man, proves that he was a real genius. He was no flash in the pan, a man who could do one or two good stories and then lie down. He "had it in him" to do good work and to do it right along. He had a whole lot of good work in him, and with men of this kind it is only a question of getting it out, and then success written in big letters and interspersed at frequent intervals with the desirable dollar sign is theirs to have and to hold. Adair had it in him. If he had only got it out there is no telling where he might be at this day. But as he never did get it out, he is still working for a reporter's wages on a small paper down south.

When Adair made his first hit the world opened up brightly for him. It was only a common newspaper "story" that first attracted attention, but it was the kind of a story that would have attracted attention if it had been printed on yellow wrapping paper and put around a bar of soap. Other men had taken the same subject, for it was an old one, and worked at it hard without doing anything startling with it. But under the sway of the young genius it became a thing for men to sit up and gasp at when they read it. The fashion in which Adair wrote made it an epic. It had everything in it that the well written story should have in it, and besides it had that which men may sit down and try to define, the touch of genius. It was a sensation in the profession for a full day after it was printed, and this is a novelty in a profession where yesterday's paper is as a thing of ancient history. It got Adair offers from two papers and it got him also an advance of salary.

A year later Adair began to attract attention with his feature stories. He was then just 24. He wrote stories that men who had grown gray at the trade would have given a hand to have written. He had a style about his work that made it popular without cheapening it in quality, and his prospects grew brighter day by day. He sold one or two stories to the magazines, and a female magazine reviewer swelled his head almost shamefully by comparing his work with the early efforts of Kipling.

His friends discussed him, and waited and hoped for the day when "Old Adair" should come before the public with a book. "He'll show 'em what real writing is when he gets started," they said. After awhile they began to say: "Don't you think Old Adair loafs a little too much?" A year later they were telling each other what a fool Adair was for wasting his chances. He had everything before him, he had the goods, all that was necessary was for him to put them on the market. And his friends waited and waited, and the goods came not.

The fact of the matter was that Adair had never adopted the habit of being industrious. He didn't want to work any more than he had to. In the early days, when he was only a reporter, he never tried to do any work outside of the mere routine of his assignments. When he had any spare time he got away some place with the rest of the fellows and devoted the time to talk and drink. The rest of the fellows, not having any particular ability, were not to be particularly blamed for wasting their time, but with Adair it was different. He had not merely ability, but genius, and a genius shouldn't throw himself away.

After awhile his friends began to talk to him. They told him that they were surprised to see no new work under his name. They advised him to buckle down and turn out something. Adair, being young, took this in the light of patronage and grew angry. When he wanted any fatherly advice he knew where to go for it, and he wasn't in need of any just now, thank you. His friends, also becoming angry, told him to go where the ice man cometh not, for all they cared, and left the young genius strictly to himself. A few editors wrote to him at intermittent periods asking for some of his stuff and Adair drifted along, doing work of a poor quality, and doing only enough of that to make a living. When he did decide to buck up and work hard, he found that he had the habit of not working so well rooted in his system that getting down to a desk for a protracted session of work was torture. As he did not love to be tortured by his own hand he didn't work much.

People who didn't know the inside facts of the case wondered why the brilliant Adair wasn't breaking into print more often than he did, but his friends knew, and called him a fool for throwing away his chances. So he drifted from one paper to another, never holding a position for any length of time, never turning out anything but mediocre work. He is still doing this. Even now he could do work that would soon make him well known, if he would apply himself to the task, but the "manana spirit" developed in his younger days has him in its grasp and he ambles along carelessly, filling positions that men with but half of his capacity laugh at, and no nearer success than he was in the beginning. Other men come and make a hit and go on upward. Adair stands still. He can do the work, but he doesn't. Other men do it. And that is the difference between the successful man and the failure.

EARLY SUCCESSES OF GREAT MEN

NO one will deny to Samuel Johnson the title of great, if only because he was so consummately human. That most of his reputation, high as it is, rests upon his biographer, Boswell, cannot be gainsaid, but the portrait would have amounted to little had it not been for the fine qualities to be discovered by it.

Johnson's maturity was slow, and his earliest successes came late in life, compared with those of other men of equal force. He was born in Lichfield on September 18, 1709, the son of a man of note locally, but one destined to lose his property through too great a love for books. This taste, indeed, was all he left his son when he died in 1732. Samuel was to labor without ceasing for full thirty years in order to provide himself with a bare living.

Johnson tried to earn his daily bread in various ways, with little success. He married a woman with children older than himself, and cherished her tenderly until she died. After she had departed he set out for London, being 27 years old, and as obscure a person as ever entered the city's gates.

He worked from hand to mouth, a bookseller's hack, says an exchange, and yet he found time to write his "London," an imitation of Juvenal, as Pope's successful satires and epistles, just then agitating the metropolis, were imitations of Horace. Johnson's work appeared in May, 1738, without his name. He was not yet 29, and yet it was to be years before he came into anything resembling secure fame after his first success with "London."

For the "Dictionary of the English Language," Johnson's greatest work, did not come out until 1755, seventeen years later, "The Rambler," "The Idler," "Rasselas," these preceding it by a little, but the "Journal to the Hebrides" was printed in 1775, while his "Lives of the Poets" did not complete itself until 1781, the author being then 72 years old.

Samuel Johnson died December 13, 1784. He occupied a remarkable place in the literary history of his century, rather through his personality, it must be admitted, than through his performances, though these have a place among the little read classics of our language.

Why this should be true every reader of Boswell can tell. Samuel Johnson was a man, every inch of him—not an ideal man, but a good one, in spite of everything.

NEW COAL COMPANY.

A new coal mining company, operating in Cape Breton, is exciting some interest in the east. Mr. Horace Mayhew, who is connected with this company, was in Montreal the other day and in an interview declared that there were 150,000,000 tons in the one seam of coal the company are now working. He looks forward to an early output of 1,000 tons per day, while in a few years the total yearly production should amount to 3,000,000 tons. Before the commencement of shipments the company have been anxious to have their screening plant ready. They contemplate building railways to Sydney and Louisburg, but if property owners show a disposition to hold them up they will go elsewhere.

AMERICAN SIZES CANADA UP.

THE November 27 issue of United States Daily Consular and Trade Reports of the Bureau of Manufacturers, Department of Commerce and Labor, is largely devoted to a report on "Canadian Industries," by Charles M. Pepper, the well-known writer on economic questions. Emphasis is put upon the field offered by the new Canadian Northwest for the development of fresh markets for the products of the United States. The report concludes that for years "the dominating influence in the Canadian Northwest as relates to markets and possibly public affairs will be that of settlers from the United States." From January 1 to October 1, 1905, 24,842 Americans crossed the boundary line to settle in Manitoba, Saskatchewan or Alberta. Of this number Minnesota contributed 5,816, North Dakota 4,613, and Montana, Iowa, Wisconsin, South Dakota and Illinois together contributed 7,176. Mr. Pepper urges American manufacturers to pay special attention to the Canadian Northwest "if they expect to hold the trade that belongs to them."

Dependence on American Products.

Points particularly dwelt on in the report are that the chief contributing cause of the building up of Canadian industries has been United States capital; that no industrial works of any kind are built in the Dominion in which the installation is not very largely from the United States, this country having almost a monopoly in mining machinery; that "while the United States has no reason to look forward to fiscal legislation by Canada that will give the United Kingdom a monopoly of the Dominion's market for manufactured products it may be expected that further exertions will be made to discriminate in favor of British products that do not come into direct competition with Canadian products. The delicate task to be attempted in the coming revision of the tariff will be so to regulate the schedules that both Canadian manufacturer and British manufacturer shall be benefited at the expense of the mills and factories of the United States."

The iron and steel situation is discussed at some length, and the establishment of the two mills now rolling rails is described in detail. As to the prospects for the iron industry Mr. Pepper says:

"The future of the iron and steel industry in Canada is involved in a number of problems not yet fully solved. It may be presumed that the Newfoundland Government will put no difficulties in the way of exporting iron ore from Belle Isle, and the ownership of the Wabana Ranges assures a supply of a certain character to the Dominion and the Nova Scotia companies. That too much dependence cannot be placed on the Nova Scotia or Cape Breton deposits of iron ore may be inferred from the fact that though the bounty on pig iron produced from native ore is 50 per cent. greater than on that from foreign ore, neither of the above companies makes extensive use of the native ore. In Ontario the total production of iron ore in 1903 was 209,634 tons, of which 153,500 were exported. In 1904 the output was 273,000 tons, of which 169,000 were exported.

——zinc ornaments

Pressed Zinc Ornaments often make the beginning of a profitable trade in "Metallic" building materials. Their beauty suggests many other metal things.

Dealers catering to the Sheet Metal Trade find the quality, workmanship and variety of the "Metallic" line more satisfactory than any other.

Being of solid zinc or copper they last forever, and their outlines are clearer-cut and sharper than any similar die stuck work.

The use of "Metallic" Pressed Metal Goods in the form of Friezes, Festoons, Centres and other Ornaments for interior and exterior decoration are innumerable. New designs are added constantly.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto and Winnipeg

We also manufacture:
"Eastlake" Metallic Shingles
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts
"Metallic" Siding, (Stone, Brick, etc.)
"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Metallic" Eavetrough and Conductor Pipe
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

414

"It is generally agreed that the industries already established must continue to depend largely on Government support, and the continuance of the duty on steel rails may be regarded as certain. Whether the bounties on pig iron and structural steel will be kept up is yet to be determined.

No Cheap Steel in Canada.

"The building of blast furnaces and steel works, which made the present steel rail industry of Canada possible, was attended by a scale of expenditure most distressing to the stockholders. Rail manufacture in the Dominion is yet far from reaching the perfection in organization and economy in production which have been attained by the plants in the United States. For many years this must be considered as a handicap in the effort to develop an exclusively Canadian iron and steel industry to supply the Canadian market or to compete with the United States. It is also the belief of many expert authorities that the lower grade ores and poor coal, with the difficulty of access to it for most sections, constitute a permanent drawback to Canadian iron industries, so that their cost will be considerably above those in the United States, and that a high tariff will always be necessary in order to keep out steel from this side. No Canadian steel works can produce cheaply in comparison with any of the leading steel making countries of the world.

"The possibility of cheapened production through new processes has not been demonstrated. The Government granted an appropriation for Dr. Heroult's electric steel making experiments at the Soo. These may result in something of value to the Canadian steel industry, but up to this time his process has been employed abroad in the manufacture of limited quantities of tool steel and steel for uses which do not involve any large tonnage. There is as yet no basis for the expectation that the electric process will afford any measurable compensation to Canada for the absence of desirable metallurgical fuel. It should be stated, however, that Dr. Heroult, in newspaper interviews, has expressed himself very confidently, stating that under favorable conditions pig iron can be made for $10 per ton, while steel will cost only about $4 per ton more to produce."

The report says that while estimates of the steel rails that will be needed for the next five years are widely apart, the majority of railway managers seem to agree on 150,000 tons as certain to be required annually, with a possibility of exceeding 200,000 tons once or twice.

"PUT YOURSELF IN HIS PLACE."

You like square dealing. You appreciate courteous treatment. When a man tells you a thing is so and you find it to be so, your faith in him begins to grow. If he tells you time after time that things are so and you always find the measure of his promises filled right up to the rim, in time you take his word for its face value—100 cents on the dollar without a question. Now, then, that's the secret of advertising that makes business. Exaggeration and deception in advertising is just as bad for a business as the same mistakes practised behind the counters

PAINT, OIL AND BRUSH TRADES

BUILDING ACTIVITY OF 1905.

PAINT is a commodity that is used most extensively in the country districts, where brick and stone construction has not yet superseded frame. Accordingly, the barometer of the paint trade is the general building activity, the country over, and not single instances of cities in which the construction of large buildings happens to be in excess of previous years. In fact, it is a serious question whether the era of brick and concrete construction that has come in of late will not be detrimental to the paint business, due to the fact that such structures do not require exterior painting. The hope is that the number of new frame buildings will increase, in spite of the popularity of other forms of construction, and that the growth of the paint demand for new and old work will continue at the same rate as in the past. The sale of all kinds of supplies that enter into frame construction has been enormous this year. Paints, roofing, nails, glass, lumber, etc., have gone into consumers' hands in greater quantities than ever before, indicating phenomenal activity along this line.

TO REMOVE PAINT.

"THERE is a great system in New Orleans in the way of clothes cleaning," said a paint traveler the other day. "A friend of mine noticed a little grease spot on his trousers the other day and naturally it annoyed him greatly. At the first opportunity he took them off and sent them to a cleaner with careful instructions to the boy as to how they should be cleaned and pressed. The boy simply told the cleaner to take out the grease spot. A few hours afterward the trousers were returned; the tailor had neatly cut out the grease spot from the garment and just as neatly patched in another piece. It wasn't exactly what Percy expected or wanted, but seems to be an ingenious method of taking out grease spots. I am going to try the experiment of getting grease all over my trousers and then sending them to the cleaner. If he is consistent he ought to send me back a new pair. Do you remember the old Texas Siftings joke? The best way to remove paint—'Sit on it before it is dry.'"

NEW PRICES ON PAINTS.

FOR some time it has been recognized that higher prices on mixed paints would rule after the new year and the present season's stocks had been disposed of.

The Sherwin-Williams Company have been the first to move in this direction, however, they having recently advanced their quotations 5 cents per gallon, the new figures now being: Quarts, $1.40; half gallons, $1.35, and gallons, $1.30, these prices all being per gallon. For the past three or four years the Sherwin-Williams Company have been selling their goods at graded prices, the same as all United States manufacturers do.

Other companies will probably revise their figures when their annual meetings are held.

PREPARATION OF ZINC WHITE.

The latest method for making zinc white is to volatilize the metal in the electric arc, and then burn it. The two carbons are placed in a crucible, which is kept full of zinc, and are placed in a closed vessel through which a current of air passes. The electricity volatilizes the zinc very rapidly, and the vapor rises into the current of air, which not only supplies the oxygen necessary for the combustion which immediately takes place, but carries the zinc oxide smoke into a large chamber through a flue. In this chamber the oxide settles to the ground, and is cleared out at intervals with shovels. The air exit from this chamber is provided with a muslin filter, to prevent the escape of any of the zinc oxide. The zinc is best fed into the crucible in the granulated form, and the crucible should be so mounted that, when necessary, the carbons can be withdrawn and the slag run out by tilting the crucible.—Le Mercure Scientifique.

BRUSH PRICES REDUCED.

The United Factories, Limited, announce that many lines of Boeckh's and Bryan's paint brushes will be lower in price for the coming season. This reduction is brought about principally, we understand, owing to their securing some very large stocks of bristles and other raw materials at exceptionally favorable prices, and this should be especially interesting to the dealer as the general tendency on brushes has been for a gradual increase, owing to the fluctuating market price of bristles, which are becoming scarcer and dearer and which will in all probability lead to higher levels in the Spring of the year when the great demand for and consumption of bristles is on.

The show window reflects more than the set of the passing woman's skirt and hat. It is the mirror that reflects the general character of the store. A nice window display is indicative of thought and care in the selection of goods, and customers are pretty sure of considerate treatment from such a dealer. And the advertising value to the merchant of an attractive window display is worth very many times its cost.

For 1906 consider what distinctive lines you will have control of by securing the agency in your town for

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, December 8, 1905.

BUSINESS this week has been very quiet. Local manufacturers have called practically all their travelers in, and are now busy taking stock There is nothing moving of any account and trade is well over for the season

So far as prices are concerned, the feature of the week has been a sharp decline in turpentine, the price now quoted being 93 cents for single barrels and 92 cents for two barrels or over

Linseed oil is a little stronger this week, and our prices are one cent in advance of last. Otherwise, there is nothing important to notice.

Turpentine—A still further decline has been shown this week. Our prices are now quoted as follows: Single barrel, 96c. per gallon. Two barrels or over, 95c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Prices are somewhat firmer than at our last report, and we are now quoting as follows: Raw, one to four barrels, 46c.; five to nine barrels, 45c.; boiled, one to four barrels, 49c.; five to nine barrels, 48c., f.o.b. Montreal. Net 30 days.

Ground White Lead—Owing to repeated jumps in the primary markets, it is felt that prices will have to be higher when stocks now in the hands of jobbers run out. We quote: Best brand Government standards, $5.65 to $5.80; No. 1, $5.40 to $5.55; No. 2, $5.05 to $5.30; No. 3, $4.80 to $5.05; all f.o.b. Montreal.

Dry White Lead—Prices are steadily held at the following figures: Barrels, $5.40; 100 lb. packages, $5.65; 6 to 10 lb. tins, $6.65.

Dry White Zinc—The strength of spelter is such as to give great firmness to our prices, which are as follows: Pure dry in casks, 7 1-2c.: in 100 lb. kegs, 8c.; No. 1 zinc in casks, 6 1-2c.: in 100 lb. kegs, 7c.

White Zinc (ground in oil)—We quote: 25-lb. irons, 8c. to 10 1-2c.; No. 1, 6 3-4c.; No. 2, 5 3-4c.

Putty—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Our prices are as follows: Casks, 7 1-4c.; 100 lb. kegs, 7 1-2c.: smaller quantities, 8 1-2c.

Red Lead—Prices in European markets have again been advanced, and as Canadian stocks are thought to be generally light, there is every expectation of a higher tone being given to this market. We quote as follows: Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75; and smaller quantities, $5.50.

Gum Shellac — We still quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

Shellac Varnish — Our prices are: $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

Mixed Paints—The turnover is rather small, at present, as is to be expected. Prices are from $1.20 to $1.40 per gallon

Castor Oil—Conditions this week are firmer than ever. Our prices range from 7 1-2c. to 8 1-2c., according to lots.

Refined Petroleum—The demand locally continues very good and prices are unchanged. We quote as follows: American water white, 16 1-2c. and 17 1-2c.; Canadian prime white, 14 1-2c. and 15 1-2c.; 18 1-2c. and 19 1-2c. ex warehouse.

Window Glass—There are a lot of inquiries and some buying for Spring deliveries. The makers are looking forward to a very busy year during 1906, as they find that the demand will be very heavy from all parts of the world. The local jobbers are still receiving odd shipments of glass via Boston and they will probably be able to get it in this way throughout the Winter. The increased freight charges will tend to keep very firm the following prices: First break, 50 ft., $2.10; second break, $2.20; first break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80: third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75: second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24.00, and twelfth do., $28.50.

ONTARIO.

Office of HARDWARE AND METAL
10 Front street east,
Toronto, December 8, 1905.

LINSEED oil and turpenutine are still being quoted at last week's figures. Turpentine weakened badly in the southern markets a week ago, but a reaction has prevented a change of figures locally. English oil has advanced again, but with the exception of stiffening matters on the Toronto market the advance has not been felt here.

Paris green is being quoted for Spring delivery by the jobbers and large bookings are expected for both the English and Canadian goods.

The largest December business yet known is reported, the open weather being partially responsible, but a greater reason is the anticipated advance in paints and paint materials next season.

Rosin has fallen to about half its former figure, but it is said that the high priced stocks are chiefly in the hands of manufacturers, jobbers carrying light supplies.

White Lead—Ex Toronto, pure white, $5.80; No. 1, $5.37 1-2; No. 2, $5.00; No. 3, $4.25; No. 4, $4.50 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 1-2 lb. packages; genuine dry white lead, in casks, $5.25.

Red Lead—Genuine in casks of 560 lbs., $4.75; ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V.. M., in casks, $6.50: in 25 lbs., $7.50; in 12 1-2 lbs., $8.00; Lehigh, in casks, $5.50; in 25 lbs., $6.00; in 12 1-2 lbs., $6.50.

Shingle Stain—In 5-gal'on lots, 57 to 90c. per gallon.

Paris White—90c. to $1.00 per 100 lbs.

Whiting—60c. to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 47c. to 48c.; boiled, 50c. to 51c.; 5 to 9 barrels, raw, 46c. to 47c.; boiled, 49c. to 50c. Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine—Single barrel lots, 95c. to 98c., f.o.b., point of shipment, net 30 days. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c., and 10-gallon packages 80c. will be charged.

Glues—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels, $1.65 to $1.75; pure linseed oil, $2.00 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2.00; 100-lb. kegs, 25c. extra.

Plaster Paris—New Brunswick, $2.00 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.00.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Trade is falling off We quote as follows: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

Crude Petroleum—Prices continue unchanged. We quote: Canadian, $1.36; Pennsylvania, $1.61; Ohio, 94c.

RUSSIAN TURPENTINE.

FREQUENT references to Russian turpentine trade journals, give one the impression that it is an inferior product. However, that appears to be a matter of the perfection of manufacture or otherwise, and according to the Farben Zeitung the processes of making Russian turpentine are being greatly improved. The material used for the production of tar and turpentine in Russia is tree stumps and waste timber, charcoal being also obtained as a by-product. Great advances have been made in the manufacturing process since the introduction of tar ovens made of steel plate, as these enable the tar oils and pyroligneous acid to be recovered, instead of charring the wood in heaps. At the same time the operation can now be carried on all the year round, and it is not restricted to the Summer, as was formerly the case. A usual way of working these ovens is in pairs, with a single still common to both, this method giving the best results with the smallest expenditure of labor. Each oven is charged with about 3,400 cubic feet of tree stumps, weighing 12,000 pounds, the oven door being bricked up, the lid put on, luted with clay, and covered with a layer of about 6 inches of sand. The fire is then started, and at the end of about 17 1-2 hours the first runnings of spirit begin to come over. The operation is complete in 105 hours, and the maximum temperature does not exceed 26 deg. C. When ten hours have elapsed after the heating has terminated, the oven is opened, and the products weighed. The yield is, turpentine spirits, 450 pounds; tar, 1,300 pounds; charcoal, 2,560 pounds; pyroligneous acid, 3,700 pounds; tar oil, 28 pounds.

PURIFICATION OF LINSEED OIL.

A very simple method, if effectual, for purifying linseed oil from the mucilaginous bodies which cause all preparations of new oil to become turbid has recently been patented in Germany. The patentee having observed that linseed oil becomes turbid on cooling by the deposition of these impurities, subjects the fresh-pressed oil to artificial cold, say, 20 deg. C., and when the impurities have all separated out in the solid form puts it through a filter press.

PARIS GREEN

The Canada Paint Company are out already with their Paris Green prices for 1906. Hardware men should write for quotations as their brand has become extremely popular and the demand last season was very large.

With their new color-making facilities the Canada Paint Company will materially increase their output for the coming season.

The Castings in THE EMPIRE QUEEN RANGE

are very even, smooth and well-proportioned. The Reservoir and Reservoir Flues are constructed to obtain the very best results in heating water. Water can be heated in The Empire Queen more quickly than in other ranges. The Ash-Pit is deep and provided with a large ash-pan, to receive and remove ashes, which has effective ash chutes to prevent ashes from falling other than into the pan.

McClary Self-Basting Roast Pan

No Basting, No Waste, and Nothing to Watch But the Clock.

Do you realize what this means to you ?

It means that no matter what you roast—meat or fowl—all you need do is to put in the roast, with a little water in the bottom of the pan, and take it out when done—crisp, juicy, and roasted to a turn.

The reason why this Roaster roasts so much better, and bastes itself, is that all the steam which arises and bastes the bottom of the roast is made to drop down again on the top of the roast, because of the special construction of the top. (See picture.)

But that is not all.

The ordinary Roasting Pan not only requires a lot of basting and watching, but it also wastes a lot of the roast itself, as most women know from experience. Actual test shows that a 10 pound piece of roast beef will only weigh 8 pounds, or less, when roasted in the ordinary pan—a clear loss of 2 pounds, or one-fifth of the weight ; at this rate you do not need to have "roasts" very often before this waste amounts to $3 or $4 a month !

This big item of waste, as well as the necessity of basting and watching, are all entirely eliminated in the **McCLARY SELF-BASTING ROAST PAN.**

It takes up no more room, and it can be used on the top of the stove as well as in the oven.

"Everything for the Kitchen."

STOVES AND TINWARE

A FIRELESS COOKER.

SOME time ago Hardware and Metal described a new method for completing the process of cooking without the use of artificial fuel. A non-conducting material was used for retaining the heat within the product to be cooked and the rest of the process was left to nature.

A new method for cooking by retained heat has recently been invented by Felix Kahn, of New York City. The patents on this invention have been assigned to James S. McCoy, 1122 Broadway, New York. In the process of cooking as heretofore practiced there is necessarily a great waste of heat, care and attention. There is also a loss of food material and also an unnecessary amount of wear and tear on the cooking utensils. It is said that the new fireless cooker invented by Mr. Kahn will save from seventy to eighty per cent. of the heat now considered necessary for the cooking of food. There is also said to be a great saving in the cooking utensils which at present are subjected to a longer period of heating than necessary.

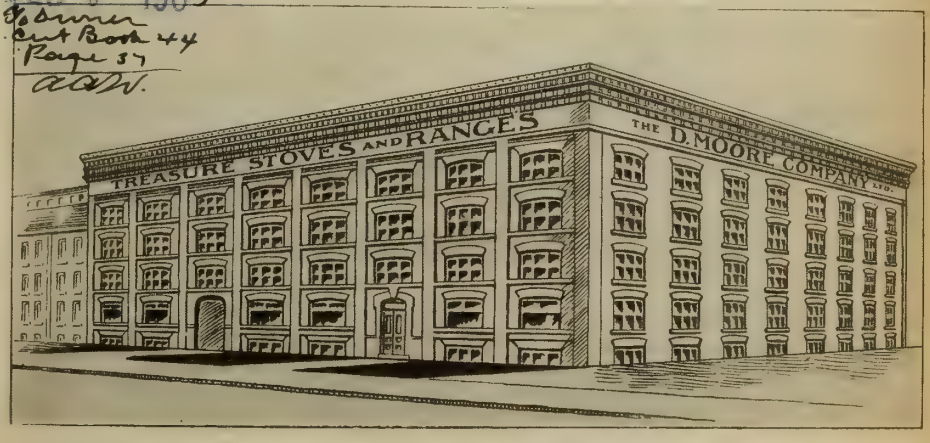
This invention is said to be an improvement over the one previously mentioned, wherein the food was merely kept in a hot condition. Mr. Kahn discovered after further experiment that after having first permeated food with heat at a cooking temperature, it was possible to stew or boil the food to perfection by the heat as conserved against loss by radiation. He found that it was physically impossible, however, to steam or dry cook by retained heat without placing in the cooker a body of water.

In the improved device a body of water is placed in the bottom of the cooking receptacle and a perforated rest is provided over the water. This rest supports the pan or secondary cooking receptacle containing the food. The apparatus consists of an outer casing of metal and an inner casing of heavy steel; between these are non-conductors. A tight-fitting lid is provided. The whole outer shell is so constructed as to admit of a minimum amount of radiation from the interior.

The food is prepared in the usual manner, and it is allowed to remain on the fire until it is thoroughly permeated with heat. It is then set into the heat-retaining part of the fireless cooker. It is said that this cooker has been thoroughly tested in a number of instances and has always worked very satisfactorily.

A NEW FURNACE LINING.

FOR several years the material known as carborundum has been known as one of the best abrasives used in industrial processes. It possesses hardness in excess of native emery, and relatively higher lasting properties. It is a carbide of silicon, and its manufacture is possible only under the enormous heat of the electric arc furnace. One of the few seats of manufacture is at Niagara Falls, and the temperature of 3,500 deg. centigrade is developed in the process. A material which will fuse only at or near such a degree of heat is, of course, eminently suitable for the lining of furnace walls, and only its high cost has hitherto prevented its adoption for this purpose. To France belongs the credit of applying carborundum to this purpose without incurring the prohibitive expense formerly deemed essential to any attempt to this end. Ordinary refractory bricks have been given a thin coating of carborundum upon the sides which are to be exposed to the furnace heat. This method is the most desirable when a new furnace is to be erected, but it is stated that where it is not expedient to rebuild the whole chamber a preparation of carborundum, known as carborundum cement, may be applied to the walls of existing furnaces, and impart to a great extent the extra refractory properties of the material. Immunity from the necessity for frequent repair is the immediate result. In addition to a fusing point far above that ever developed in a coal, coke, or gas furnace, carborundum resists the action of the most potent chemical agents. Chlorine, bromine, sulphur, and oxygen have no effect upon it, even at a temperature of 1,200 deg. centigrade. Thus there are a variety of industrial processes in which the lining of furnace walls with carborundum may be profitably introduced.



The usual way of preparing this carborundum cement is by mixing three parts of carborundum with one part of water-glass, i.e., silicate of soda. Before application the brickwork must be thoroughly brushed to remove all dust and extraneous matter, and the cement applied like a paint. It is found that furnaces that have been already fired require a good deal more brushing down than newly set furnace walls to secure proper adhesion of the carborundum cement. Twenty-four hours is sufficient time to allow the composition to become comparatively hard, and after this lapse of time the fire should be started. The furnace will be found to have an interior lining of refractory carborundum with all the resulting advantages.

D. MOORE CO. EXPANDING.

THE accompanying illustration is of a large warehouse now being erected by the D. Moore Co. in connection with their already extensive stove works.

The remarkable progress this company has made is manifest from the fact that they have been building extensively and adding large additions to their plant regularly each year for the past five years. The new warehouse which is now being constructed is to make room for an increase of their manufacture and improve their facilities for turning out high grade stoves and ranges. The former warehouses and additions are being equipped with the latest improved machinery and will be used entirely for manufacturing, which will assure prompt shipments to all their customers.

Adams
Cut Book 44
Page 37
ADV.

New Warehouse being erected by D. Moore Company, Hamilton.

The demand for Treasure stoves and ranges manufactured by this company and the way they have been received by the trade is such that this company has experienced difficulty in keeping up with the demand, having had to keep their plant running overtime all Fall making increased facilities and a larger output necessary. The present condition is undoubtedly due to the superior construction and high finish of their up-to-date lines, which command large stove trade in nearly every section of this country.

Why don't you demonstrate the heating stove as well as the cook? By having one to heat your store and keeping account of the fuel it burns you can have a continuous demonstration without extra cost.

SYSTEMATIC ARRANGEMENT OF STOCK.

IT is doubtful if there are any similar stores in Canada of so small a size as the one illustrated in the accompanying photo, which has such a neat and attractive display of such a large quantity of goods. The store is that of Mr. B. E. Boniface, 58 S. John street, Hamilton, and Mr. Boniface states that on account of the smallness of the store it has been necessary for him to fill up every inch of available space. Readers of Hardware and Metal will agree that he has done this to very good advantage and that the order and system shown indicates Mr. Boniface to be a man of considerable ingenuity. The rows of pails, tanks, coal scuttles, lanterns, etc., on the ceiling and of other tin and enamelled ware on the shelves, as well as the box work in which kitchen brushes, etc., are stored, and the cleanly appearance of the counters, show

Systematic Display of Tinware in B. E. Boniface's Store, Hamilton, Ont.

cases and floors, is very commendable. The presence of food-choppers, sad irons and other such goods also indicates that the merchant is thorough in his effort to make his store the headquarters for women buyers, who desire cooking utensils and other kitchen needs. Whether you turn the photo upside down, or look at it in the proper way, the neatness of the arrangement of the goods attracts attention. Can any other reader of Hardware and Metal supply us with a photograph showing an equally attractive display of tin and enamelled ware.

IMPROVEMENT IN LANTERNS.

New patents secured by Messrs. E. T. Wright & Co., Hamilton, make their latest Cold Blast Lantern one of the strongest and best on the market. In addition to doing away with the perforations on the side of the globe holder and perforating a ring constructed around the base of the hood, a series of perforations have been made on the upper part of the globe holder, thus feeding more air to the tubes and decreasing the volume of oil consumed. Another improvement is the forming of a solid hood to the lantern with openings on the side. The new lantern cannot be extinguished by ordinary usage.

THE SECOND-HAND TRADE.

HOW is the second-hand stove business? This is a department that is capable of making money to the dealer if he will run it right, says the Hardware Trade. Everyone knows that there is money in second-hand goods of all kinds—at least everyone that has had dealings with the second-hand man. He buys for almost nothing and sells for a fair price. Result: One to two hundred per cent. profit, or even more. The same procedure can be followed with stoves, although they are usually taken in exchange for new ones. But an old stove that is at all good can be easily fixed up to bring a handsome profit. Perhaps it needs only another grate or a fireback, or simply cleaning and polishing. A little work and polish applied to an old stove may bring you two hundred per cent. profit. And that is not to be sneezed at. Some dealers are afraid that the second-hand department will draw trade away from the new stoves. It will not, if handled properly. The old stoves should be offered the customers only as a last resort. As long as there is any chance of his buying a new stove, do not try him with an old one, but if he is about to slip through your fingers, then you can often get him to take a second-hand heater or cook. Keep the old stoves neatly polished and set up in the back room, or at the rear of the store. One city store that makes a specialty of selling stoves on the installment plan has a standing offer to take "your old stove as first payment." As the first payment is somewhere in the vicinity of five dollars, usually they are perfectly safe.

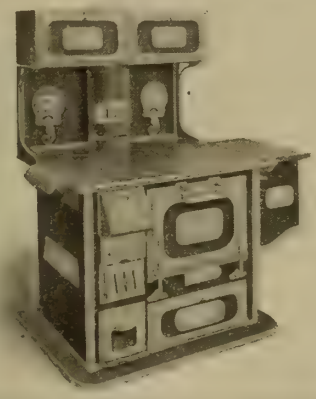
AN ODORLESS GAS STOVE.

THE principal objections advanced against gas stoves of the usual type are that they give a very dry heat, and that they almost invariably yield a disagreeable odor. In addition to this the amount of gas consumed is quite large, so that they do not afford very economical heat. A new type of gas stove, in which these objectionable features are overcome has been put on the market. It is claimed for this stove that the cost of running it does not exceed that of the ordinary oil stove, that it keeps the air of the room moist, and that it is absolutely odorless. An important feature of the stove is a novel burner which insures a perfect distribution of the mixed gas and air to the burner tips, and which is arranged to be easily taken apart for cleaning purposes. The burner consists of two plates, the lower one of which is coupled to a gas supply pipe projecting through a galvanized iron pan in the base of the stove. This pan is filled with water which, as will be shown presently, serves to keep the air in the room moist. At the bottom of the supply pipe is the valve which controls the amount of air mixed with the gas. The lower plate of the burner is formed with an annular flanged rim which serves to space the two plates apart and with a series of conical tubes which are adapted to project through openings in the upper plate. These openings are larger than the tubes, and thus form annular passages through which the gas mixture flows to the blue flame jets.

To insure a more perfect distribution of the mixture to the jets, a boss is formed on the under side of the upper plate in which there are a number of spiral grooves leading to the different burner tips. One of the conical tubes is shorter than the others and over it in the upper plate is a closed thimble. The gas flows through a passage between the top of this pipe and the thimble and is then directed downward in a jet which plays upon the water in the pan. This insures a rapid evaporation of the water, which intensifies and moistens the heat and removes all odors from the gas stoves. If desired, antiseptics and disinfectants may be added to the water to purify the air of the room. An interior cone-shaped drum is so arranged as to produce a strong draft. A plate at the top of the drum deflects the heated air, causing it to flow against an outer cone, thence it passes through an opening in the top of the latter cone and out through the perforations in the stove casing. The outer and inner cones are connected by a third cone, forming a reservoir for heated air which keeps the outer cone hot, thus heating, as well, the air which pours up between the outer cone and the stove casing. In use the deflector at the top

PROUD OF HIS COUNTRY

AND ITS INSTITUTIONS is the dealer who can with confidence, in selling an article, say to his customers: "This is made in Canada, and neither the Yankees nor any other people can produce anything better."



Conditions have changed in recent years, and are changing. "This is imported" is not cutting much figure now-a-days. The **Made-in-Canada** article is what is wanted by both trade and people. Especially is this true of **Church's Cold Water**

ALABASTINE

as is evidenced by the rapidly increasing demand from year to year.

ABSOLUTELY NECESSARY now to stock very early in the season this Permanent and Sanitary Wall Coating, that **HARDENS WITH AGE**, to insure having it in store when the early spring rush of house renovating comes on. The logical conclusion is **Order Now** from jobber or direct. Spring dating. It is **BUSINESS** to do this, and not have to say: "Just out of that shade." All tints and white in stock, together with a good supply of advertising matter if necessary.

THE ALABASTINE CO., Limited, - - Paris, Ont.

A person may get along fairly well with a watch that has a poor, cheap case, providing the works are good, but not so with a RANGE.

The "insides" or works of a range, no matter how good, will prove worthless, unless encased in a good body. The body of

The Joy Malleable and Steel Range

is made of 16 gauge **Patent Polished Steel.** No paint or Japan to burn or peel off. Wiped occasionally with a cloth dampened in Kerosene Oil, it retains its primal brilliant lustre always.

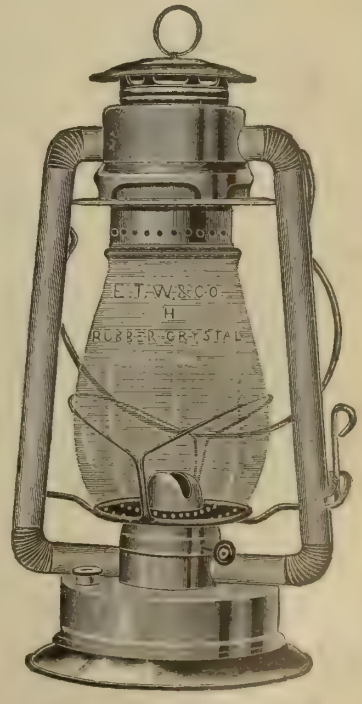
New Style Cold Blast Lantern

(Patented)



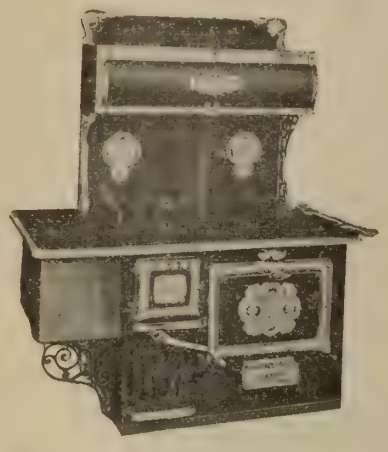
We beg to draw your attention to the cut herewith, which is an improvement of great value. You will notice by the annexed cut of the old style Cold Blast, and by this cut that the difference is in the top. This improvement makes it utterly impossible for the Lantern to be blown out by any ordinary means.

Made with Side Lift as shown in cut, or Bottom Lift.

Plain or Japanned.

Old Style Cold Blast Lantern

This cut shows our old style Cold Blast Lantern, which was and even is now the best Lantern of the Cold Blast. However, we have discontinued the manufacture of this style owing to our latest improved Patent—see cut annexed.



E. T. WRIGHT & CO., - Hamilton, Canada

APPARENT FACTS

Modern competition is so keen that help along the up-grade road of prosperity cannot be despised.

Can you afford to ignore the enormous demand which quality and systematic advertising has created for the Oxford lines?

As practical men you know that the prompt and sustained success of the

Our guarantee bond goes with every Range.

Oxford Chancellor Range

was inevitable. Quality placed it in the first rank. Quality keeps it there.

The Oxford Chancellor's tasteful adornments of nickel trimmings attracts—its exclusive features sell it.

The oven capacity of this range meets the requirements of all families. Our patented spring drop door makes a convenient shelf for basting.

This range burns soft or hard coal or wood.

Each fire-box is mathematically proportioned.

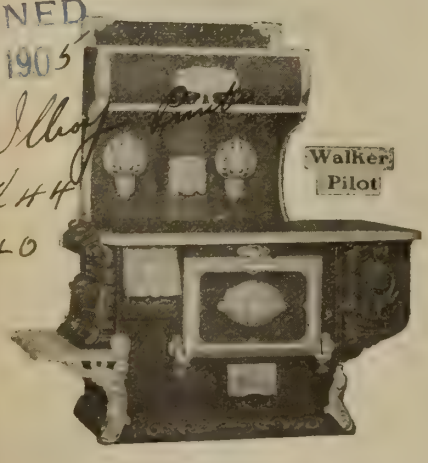
Our celebrated Duplex Grates are provided for hard coal burning.

The fire-box for wood is very roomy with air space between it and the oven front. The Chancellor is furnished with fire-box linings for either purpose as desired.

The Reservoir of planished copper can be easily detached or attached by any-one in a few moments.

The Oxford Chancellor Range should certainly have a prominent place on your floor.

Write for Catalogue 61.



WE also manufacture Cast Iron Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges, Warm Air Furnaces and all kinds of cooking and heating apparatus, Plumbers' Supplies.

WANTED.

WANTED—A partner to take half interest in old established hardware business in central Eastern Ontario and manage it; must invest at least $3,000; full particulars on application. Box 297, HARDWARE AND METAL, Toronto. [49]

WANTED—A representative stove or other manufacturing company, to manufacture and sell under our Canadian patent, our wonderful Cosby Patent Air Tight Bakers and Heaters. These stoves are the most novel, useful and salable stoves ever built; will make an excellent line for any hustling company, and are easily and quickly introduced; sell well the entire year, and bring in a good steady profit; full information on request. In writing, please give full information regarding your plant and facilities for pushing a good thing. Address Wm. H. Hefner, P.O. Box 542, Richmond, Va., U.S.A. [50]

SITUATION WANTED.

WANTED—Position as salesman by hardware man; five years' experience; strictly temperate; A1 references. Address Drawer E, St. Marys, Ont.

WANTED—Position as salesman by hardware man with twelve years' experience; would like connection with manufacturers selling to the Canadian wholesale hardware trade; best references. Address K, 607 Ave. Hotel de Ville, Montreal. [49]

FOR SALE.

SET of good tinsmith's tools. Wallace, 135 Dalhousie St., Toronto. [49]

HARDWARE and Stoves in good manufacturing town; population 3,900; one opposition; stock $5,000. Box 298, HARDWARE AND METAL, Toronto. [52]

AGENCIES WANTED.

A FIRM of general hardware dealers in Kingston, Jamaica, is prepared to accept agencies for every description of hardware, cutlery, glassware, enameled ware, household furniture, leather goods, coach-builders' materials, etc. All enquiries should be addressed to HARDWARE AND METAL, Toronto, and full particulars will be given. [49]

SITUATIONS VACANT.

WANTED—Two first-class tinners for furnace work; $3.25 per day, eight hours; steady employment. Apply The Wm. Ralph Co., Vancouver, B.C. [51]

WANTED—A young man, some experience hot water heating, to have a salesmanship. Gurney Foundry Co., Limited, Toronto. [49]

SHEET METAL WORKERS WANTED—Men accustomed to heavy galvanized iron; permanent job for good men, as our machine is undoubtedly the best and is rapidly growing in public favor all over Canada, West Indies and South Africa; good mechanics seeking investment may take preferred stock if desired. St. Thomas Acetylene Manufacturing Company, Limited, St. Thomas, Ont. [49]

of the interior cone becomes red hot and insures perfect combustion of any partly burned matter which may be carried up by the strong draft. The patents on this novel stove are owned by the Odorless Gas Heater Co., 86 and 88 Worth street, New York, N.Y.

PRODUCTION OF TIN.

CONSUL WILLIAMS, of Cardiff, Wales, furnishes the following statistics relating to the production of tin, but the following table, showing the output in tons by countries for the last three years, is approximately correct:

	1902.	1903.	1904.
Malay States	53,756	54,797	58,657
Banca & Billiton	18,765	20,000	14,638
Bolivia	10,150	9,500	9,200
England	3,950	4,150	4,282
Australia	3,206	4,991	5,082
Miscellaneous	350	395	384
Total	90,177	93,893	92,243

According to these figures the production of tin is almost at a standstill, and there was an actual falling off in the output during 1904. On the other hand, the consumption is on the increase, and the accepted estimate for 1904 is as follows:

	Tons.
United States	38,000
Great Britain	15,898
Germany	14,832
All other countries	25,525
Total	94,755

Thus the consumption for the year was 2,512 tons in excess of the output. Ordinarily, the tin consumed is lost forever, but the increasing demand and the threatened diminution of the available stock has given rise to a new industry, the detinning of tin scrap. The statistics show that the United States consumes over 40 per cent. of all the tin produced, and it should lead in this recovery of tin from scrap.

HARDWARE TRADE ITEMS.

Get a profit on the stoves you sell. It is foolishness to let them go at a margin above cost that will really not pay for the handling.

The stove demonstrations are bringing the women to the store. They are a big thing for the store whether any sales are made on the spot or not. In another year the well-run hardware store will not omit the stove demonstration. It is becoming a necessity.

The lamp and lantern department should be pushed to the front. Lamps and lanterns on tables will do more business than where the stock is piled on high shelves or slung from the ceiling. Chimneys, globes, burners and wicks are not to be forgotten. Little items—but they count.

Be sure that every stove you sell is set up properly. Poor setting up is responsible for many of the faults found in stoves. If you can not place the stove up yourself, be sure to tell the purchaser just the condition necessary to the best results, the size flue, its condition, the length of pipe, etc. All these things count.

Are you interested in any of the lines that are advertised?
A Post Card will bring you price list and full information.
Don't forget to mention Hardware and Metal.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

CANADA'S imports reach the total of $251,603,000, or twenty-five per cent. of the United States' total imports. Canada, with one-fourteenth of the population of the United States, is only quadrupled by that country in the value and volume of her imports. For every $2.50 worth of imported goods consumed in Canada, 70 cents' worth of imported goods are consumed in the United States. The meaning of this difference is that Canada should manufacture more and import less. Canada is not superior to the United States as a consumer of goods, domestic or manufactured. The United States is superior to Canada in manufacturing to supply her own needs instead of having to import. Canada should increase her manufactures and decrease her importations, especially at the expense of the United States, which supplied $152,431,626 of our importations, or 60.58 of the total.

A soap factory is likely to be established at Berlin.

An extension is to be built to James Bros' foundry at Perth.

The Sommerville Paper Box Factory at Stratford is to be enlarged.

The surrender of the charter of the W. G. Nott Bicycle Co., of Brantford, has been accepted.

The Borland Carriage Co. have been granted the privilege of increasing their capital from $25,000 to $250,000.

The Eastern Coal Co. have been further incorporated to carry out and transact all matters and things comprised within the powers of the company. A. Alfred Laurie, Toronto, has been appointed attorney for the company.

The Perry Lubricator & Machine Co., Ottawa, share capital $250,000, purpose to manufacture, buy, sell or deal in machinery or mechanical devices. The incorporators are J. Walker, A. Wilson and A. Berry of Montreal, and E. A. Bleakney, W. Gamble and F. A. Heney, of Ottawa.

The Twin City Brick & Supply Co., Port Arthur, share capital $40,000, purpose to manufacture, sell and dispose of cement and all kinds of bricks and building material. The directors are to be J. A. Stewart, H. Finger, E. McEwen, T. H. McCauley and J. McCutcheon, all of Port Arthur.

The Ontario Car Ferry Co., Montreal, share capital $500,000, purpose to carry on a general business in steamships, tugs, barges, ferry boats, etc. The incorporators are C. M. Hayes, F. H. Fitzhugh and J. W. Loud, of Montreal, and A. G. Yates, W. T. Nooman and R. W. Davis, of Rochester, N.Y.

Parker Foundry Co., Montreal, share capital $25,000, purpose to carry on the business of founders and manufacturers of castings, plumbers' supplies, machinery, etc. The incorporators are J. Ballantyne, H. W. Glassford, of Montreal, and M. C. Rosenfield, Cleveland, Ohio, W. J. White and A. W. P. Buchanan, of Montreal.

The George Tucker Co., of Canada, Montreal, share capital $40,000, purpose to manufacture and deal in all kinds of stationery supplies and hardware sundries. The incorporators are J. H. Hough, W. H. Butters, F. R. Lanigan and H. Pillow, all of Montreal.

The Canadian De-Tinning & Chemical Co., Montreal, share capital $100,000, purpose to manufacture and deal in all kinds of chemicals and chemical products. The incorporators are H. H. Wolff, J. Wolff, A. Pollack, A. Bover, and H. J. Hague, all of Montreal.

The Northumberland-Durham Power Co., Cobourg, share capital $250,000, purpose to construct, maintain, complete and operate works for the production of electricity for the purpose of light, heat and power. The directors are W. J. Crossen, W. J. Maher, F. M. Field, D. Ewing, T. C. Lapp, J. Henderson, A. R. Dundas, and E. C. S. Huycke, all of Cobourg, J. A. Culverwell, W. McLean, R. A. Mulholland, J. F. Clark and F. W. Galbraith, all of Port Hope, Charles Donnelly of Pittsburg, Pa., S. Nesbitt of Brighton, E. T. Adams, of Toronto, and R. A. Elliot, of Roseneath.

No. 32. OSHAWA, ONT. Dec. 9, 1905

FIREPROOFING.

It doesn't matter what part of the building requires fire protection. We are now making :

Metal Lath, Hollow and Solid Partition Studs, Furring Strips, Column Covering, Plasterers' Metal Corners, Lathers' Staples, Lathing Wire, etc.

No other concern is manufacturing such a variety of **Fireproofing**, so no other concern can compete with us in building essentials.

There is scarcely a building being erected at the present time without **Fireproofing** being used. Now, you perhaps think that the orders for such **Fireproofing** are given to "big concerns" solely. Such is not the case. If a large quantity of **Fireproofing** is needed, and your stock is not large, you have merely to forward the order to us. The goods are then sent direct, **and you get the discount.** So you see, any hardwareman can get a share of this trade—size of store or stock doesn't count. Of course, it is well to always have a supply of the **Fireproofing** on hand, for then trade is influenced without an effort on your part.

And you might just as well get the orders for

Steel Roofing, Corrugated Iron, Steel Shingles, Conductor Pipe, Metal Shutters, Sky Lights, Finials, Steel Siding, Steel Ceilings, Eavetroughs, Metal Doors, Prepared Roofing, Ventilators, Statuary—in fact, **anything** in this line.

We have a descriptive booklet. Besides, any of our offices will be pleased to forward you specific information.

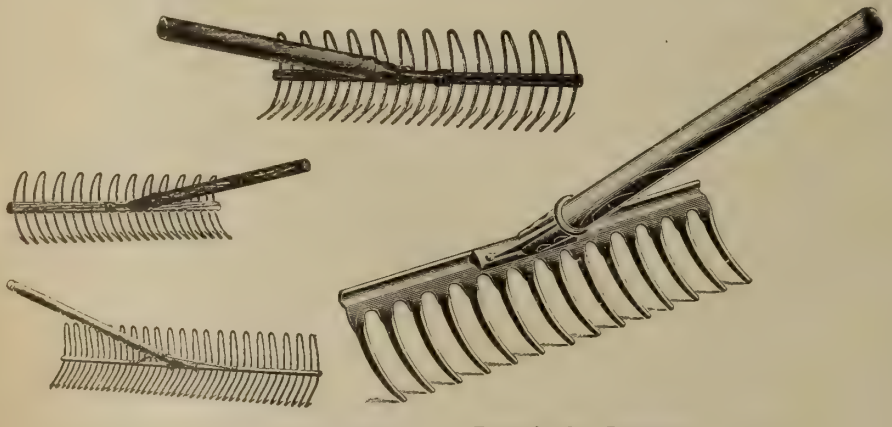
METHOD

makes a big difference in rifle construction. Certain methods stand for just so much, and certain other methods stand for just so much more. The best methods result in the best rifles.

THE HAMILTON RIFLE

MODEL No. 23



is what might be called a "method" rifle. It is made by a process which is superior to other processes—ensures more efficiency, more accuracy, more general satisfaction. The whole plan of construction is a thoroughly tried and proven one. And there is even method in the price—**Model No. 23** sells at $3.50—a rifle for every man in the land.

Prepare at once for **Hamilton Rifle** business. Your jobber will supply you.

THE HAMILTON RIFLE CO.

DEPT. 71 **PLYMOUTH, MICH.**

Our **LAWN RAKES** are the **Best on Earth.** Your stock is not complete without them. Also Garden and Weed Hoes, Corn Planters, etc.

We are the largest manufacturers of **Posthole Diggers** on earth.

If interested please write for our Catalogue.

PLUMBERS' TRIAL NEARING END.

THE evidence in the conspiracy case against the master plumbers and the supply associations was concluded on Thursday before Mr. Justice Clute. No evidence was offered in contravention of the Crown's case. Mr. W. R. Riddell, K.C., for the master plumbers, did not attempt to justify the bonus system, and went so far in condemnation of it as to advise the return of the money improperly taken in that way.

Mr. Watson for the supply men took the technical objection that the section of the code regarding conspiracy did not apply to the acts of two corporate companies, and on behalf of the association strongly repudiated any intention to commit any wrongful or illegal acts. Mr. DuVernet, Crown prosecutor, delivered a scathing denunciation of a combination under which, he said, "citizens had been absolutely defrauded, and under which while making dishonest tenders 'honest' and 'reputable' members of the association had sat around the table, distributing other people's money among themselves and arranging to what extent they could plunder and rob them."

The letter from the Page-Hersey Company to C. A. Sullivan, referred to on another page, reads as follows:

Nov. 28, 1905.

Mr. C. A. Sullivan,
Westmount P.O.

Dear Sir,—You wrote me on the 15th of May last relative to a letter which you had written to Guest & Co. some time before that. In your letter to us you stated, "that on account of his not being on the jobbers' list we could not sell to him. I explained to him when in Toronto that the jobbers handled our output; no reference was made to the Plumbers' Association in the letter—to my memory. We have nothing to do with that association according to our jobbers' list as I understand it."

In the face of this letter we can scarcely understand how you could have written such a communication as that which was read in court as per the newspaper report which we hand you herein. You know perfectly well that we had nothing to do with the Plumbers' Association, and further that pipe was exempt.

We cannot afford to have anyone in our employ who would write letters like the one referred to. Your action has got the company into serious trouble, and has also had the effect of having the writer indicted to appear in the court on Friday on a charge of conspiracy. He has already lost considerable time over this matter, but was finally excused as a witness, as the Crown counsel stated that you were the man they were after as you had written the letter in question. They desire you to explain what your reasons were for having written such a letter in the face of the writer's statement that we had nothing whatever to do with the Plumbers' Association, and sold our pipe to whomsoever we chose. It is probable that you will receive a subpoena to attend court in connection with this matter.

In the meantime we will have no recourse but to dispense with your services, and hand you herein a check for your salary up to the first of December.

We very much regret the necessity for this action, but you can readily understand we cannot afford to take any more chances. Yours very truly,

W. W. Near, Page-Hersey Co.

CHRISTMAS ADVERTISING

A Variation.

WHEN Christmas time draws near you naturally feel that your advertising needs a variation. Ordinary methods will scarcely suffice, you think, because so many more merchants will be advertising and so many more stores will look attractive.

Superior Methods.

Christmas advertising does require superior methods, not because it should be less businesslike than any other advertising, but because it must be adapted to the customs of the season.

Silverware, etc.

Silverware, cutlery, etc., will, of course, be brought to the fore. While a knife is always a knife, and price and quality always determining factors in purchasing, there is an admixture of sentiment with Christmas business which cannot be disregarded. Therefore, your newspaper advertising should have an extra attractiveness and cordiality about it, be bland in tone and not aggressive. Commonalities should be avoided and minute details give place to seasonable references.

Booklets.

The Christmas newspaper advertising might be augmented by a neat booklet containing greetings and an enumeration of the articles announced in the papers. A copy of this booklet could be given to every purchaser from now on, and other copies circulated within a reasonable area.

Show Cards.

A few suitable show cards might also be of service when the people have been attracted to your store. Show cards enliven the display and perform the function of "instant index."

The Package Slip.

Another successful publicity instrument is the package slip. If you feel that issuing a booklet will entail too much expense, you could have slips printed and one inserted in every bundle sent out. The slip can be made particularly effective when it is pressed into the capacity of address label as well. Of course, in the latter case you cannot have much more than a bare announcement printed on the slip. Its effectiveness consists in the fact that it will be seen.

The Window Bulletin.

The window bulletin is an inexpensive but efficient method of appealing to transient trade around Christmas time. On a large card, or piece of manilla paper, you might write: "It's not all gold that glitters, but the spoons you see in this window are silver!" Then, "Thousands of people will be buying skates—why not do it now?" etc. If run regularly Christmas week, with a change each day, good results ought to accrue. The bulletins would certainly not cost much.

The Children.

Children figure considerably in Christmas purchases. Don't overlook them when trimming your window, decorating your store, etc. It would be well to have skates and hockey sticks arranged in the window, with sleighs somewhere in sight. If your store attracts the youngsters, they will see that it attracts their parents.

The Farmers.

An important element to be reckoned with in Christmas week is the farmers. Be sure some copies of your booklet or package slip reach them. It would be advisable, also, to run one or two "direct" advertisements in the weekly papers.

Pictorial Advertising.

A writer in "Hardware" has the following to say.

"To the looker-on one of the most conspicuous advances in the advertising field is the artistic element. The result is that the advertising pages of some of our great magazines are really works of art. While this is true in a certain measure in all advertising, it seems less to have pervaded the hardware world than its subjects deserve. Well, maybe art and anvils are incompatible. Yet, why cannot the man who has a first-class hammer to sell put it and its proverbial companion, "the looking glass," in the hands of a bright-faced though spoiled kid, and let the camera do the rest? Children play no small part in the successful advertising of the present.

The Cow Tie.

"Picking up a trade publication, the eyes fell upon a full-page ad. for a cow tie. Aside from the illustration of the tie, which required but a small part of the page, there was very little use made of the space. What a fine half page might have been given to a pleasing landscape with some prize winner in the foreground secured by one of these ties. Turning a few pages, this very idea was to a certain extent materialized, though evidently designed solely for utility, not art. No restful trees or quiet stream appear in the rear—only bare barn wall. The expression on the face of the bovine is not indicative of the contentment which a first-class tie should inspire. The man on the hunt for the article would probably be attracted, but the possible convert might easily pass it by.

Grace and Beauty.

"Household specialties, as carpet sweepers and floor cleaners, are as promising subjects as baking powder or cereal. Yet we all know the attractive figures which appear in the latter. Let grace in motion combine with beauty in feature, and the woman pushing the carpet sweeper has a chance for her share of attention. Just think what the dealer in angling goods might present in the way of beautiful scenery. Those who cater to the hunter's wants can add natural history specimens to his attractions, deer or grouse being represented under cover of the Blank & Co. rifle.

Ice Cream Freezers, Etc.

"For the ice cream freezer man there is the pastoral scene with the dairy herd—snowbound, preferably; ice skates are suggestive of the ice-covered stream bordered by evergreens and thronged with merry figures; the Christmas turkey as manipulated by a brand new carving knife of superior make would certainly attract notice; the small boy getting his hair cut might do for the clipper ad.; beauty in architecture and interior decoration should be remembered by the paint and varnish man; the prospective captive of the new mouse trap may be as fascinating in advertising columns as in the feature article of a Seton Thompson, even the patent clothes line may be placed in beautiful surroundings, and the toughest article in the hardware stock become a pleasing subject for illustration." A.A.B.

FEWER POCKET KNIVES SOLD.

"THERE is not so much call for pocket knives as there used to be," said a man who has been in the cutlery business for forty years. "There was a time when every man carried a pocket knife, but now you might stop fifty men in the downtown section and ask for a knife and not more than a dozen could accommodate you. We do not carry anything like the stock in this line we did in other lines. Now one person in an office or business house keeps the pencils sharpened for the boss and the help. The old horn handles have nearly disappeared. They are still found in the country stores, but the city man who carries a pocket blade wants something that will not wear out his pockets, and which will not be any extra weight. Some of the old brands of knives which used to be good sellers the year round have entirely disappeared from our cases, and nearly so from the factories. A long time ago the pocket knife most in demand was the 4-inch spring back. One reason why it had such a run was that it was a mighty handy weapon in a fight. When the blade was open the blade stayed put until you pressed a spring which closed it."

BUILDING AND CONSTRUCTION

CEMENT MILL MAY MOVE.

THE next meeting of the National Portland Cement Company's shareholders promises to be an interesting one. The directors of the company have recommended the removal of the company's mill from Durham, Ont., on account of the scarcity of raw material in that locality. The town council of Durham disputes the statement that material is scarce, and a committee appointed by it, under the chairmanship of Dr. Jamieson, M.P.P., investigated the question, and reports that there is a sufficient quantity of marl obtainable to keep a cement mill running for a man's lifetime.

The company was capitalized at one million dollars, a quarter of a million of which went to the promoters. A mill was constructed with a capacity of 1,000 barrels a day, and said to be one of the best mills on the continent. In the building of it, however, a liability was incurred, which was increased by inexperience of workmen, and accidents during the first year. No dividends being forthcoming, the stock fell to 16 cents on the dollar.

This last year things went very much better, and the company was enabled to pay back $13,000 which had been borrowed from the bank, and to reduce the indebtedness from $127,000 to $30,000. On the top of this favorable report the citizens of Durham, who are largely interested in the company, were thrown into consternation by the resolution of the directors to move the plant elsewhere.

BUILDING NOTES.

A new curling rink is to be built at Grimsby.

The Methodists will build a $40,000 edifice at Moosejaw.

John Slater, Hamilton, is to build two brick houses to cost $3,000.

Thwaites & Spragg, Hamilton, are to build two brick residences to cost $2,800.

The Hudson Bay Co. are to build a large addition to their retail stores at Vancouver.

Contractor Black, Regina, is erecting a three-storey temperance hotel at Rouleau, Sask.

Ramsay & Philip will build a four-storey office structure in Dauphin, Man., next Spring.

A building permit has been issued at Brantford to E. L. Cockshutt, for brick addition to a store to cost $1,500.

Croker & Boucher, tea merchants, 18 O'Connell street, Montreal, are reconstructing their warehouse at a cost of $7,500.

The Canadian Pacific Railway Co. has spent $64,500 in building operations this year at Calgary. Large new freight sheds to cost $28,000 are also planned for construction.

The Alexander Brown Milling Co., Toronto, have taken out a permit for a flour mill to cost $40,000, to replace the one recently destroyed by fire.

The report of the building done at Hamilton in the month of November shows a wonderful increase as compared with November last year. The figures are: November, 1905, $395,625; November, 1904, $68,200; an increase of $327,425.

The town council of Westmount, P.Q., is considering a new building by-law which, if it goes into effect, will make it unlawful for any person to build, have or maintain any dwelling house which occupies more than two-thirds of the building lot on which it is erected, to construct in such building any sleeping room which is less than 640 cubic feet in dimension, and which does not possess direct communication by window with the out-of-doors.

The report of the building inspector of Montreal as to building operations in the city and vicinity shows that seventy-seven permits for new buildings were issued during the month of November, the cost of the structures being $313,645. Permits for alterations numbered twenty and involved an amount of $26,871. This made a total amount invested in building operations last month of $340,576, an increase over the corresponding month of last year of $105,611.

New York and Brooklyn report 52 per cent. more construction in 1905 than in the corresponding period of 1904. Buffalo, 4 per cent.; Chicago and Cincinnati, 60 per cent.; Columbus, 65 per cent.; Denver, 50 per cent.; Detroit, 56 per cent.; Indianapolis, 41 per cent.; Kansas City, 27 per cent.; Louisville, 76 per cent.; Memphis, 29 per cent.; Milwaukee, 28 per cent.; Minneapolis, 35 per cent.; New Orleans, 9 per cent.; Omaha 69, Philadelphia 19, Pittsburg 49, San Francisco 30, St. Paul 80, St. Louis 88, Tacoma 4, and Washington 77 per cent. These reports are so favorable that they seem exaggerated, but there cannot be much doubt that they are approximately correct.

With another month yet to run, the cost of building operations in Winnipeg this year is within a quarter of a million of the $10,000,000 mark. The number of permits and the value of buildings for which permits were given during the month of November greatly exceed the figures of the same month last year. Following are the statistics: Value of buildings, January 1 to November 30, 1904, $5,640,110; 1905, $9,743,560. Value of buildings for month of November, 1904, $471,590; 1905, $788,771. Number of building permits issued January 1 to November 30, 1904, 1,742; 1905, 2,569. Number of buildings for which permits were issued for month of November, 1904, 156; 1905, 238. Number of new buildings erected from January 1 to November 30, 1904, 1,620; 1905, 2,933.

Article XXII.

STEAM HEATING.

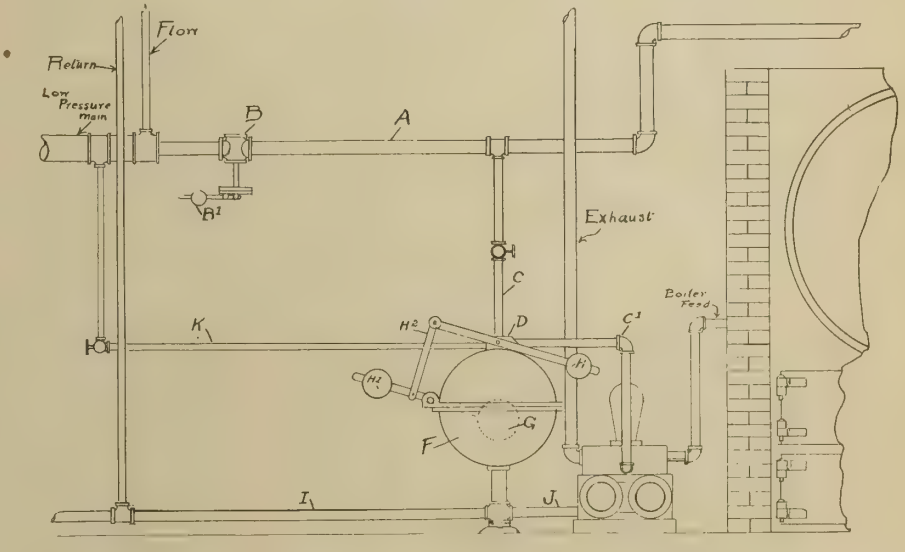
FOR general purposes the various systems of steam heating may be divided into four classes, according to the pressure of the steam, and the manner in which it is used, and these four systems are called the high pressure, low pressure, exhaust, and vacuum, respectively.

We have already dealt with three or four applications of the low pressure system, which included the "two pipe" gravity, the "single pipe" gravity, and the "overhead" system, any of which might, if desired, and the necessary amount of room for expansion having been allowed, be used for high pressure, but it is our intention to deal on this occasion with a portion of a system which we have already described in part, (Science Building, heating) and to attempt to make clear the method of returning to the boilers, in which is carried a high pressure, the water of condensation from a low pressure system.

It will be remembered that in this system, which is of the "overhead" type, the boilers carry a pressure ranging around 80 pounds to the square inch, while perhaps not more than two to five pounds are carried in the piping, so that it is necessary to have machinery for the purpose of reducing the boiler pressure before it enters the piping system, and of forcing the condensation back again into the boiler against a high pressure.

If the reader will carefully note the following description given in connection with the accompanying sketch he will obtain a very good idea of the manner in which the desired object is accomplished.

In the sketch will be observed what may be regarded as the beginning of the low pressure heating plant on the left-hand side, marked "low" pressure main, from which is run a "flow" pipe supposed to be connected to a radiator from which is run back the "return" pipe shown, and which is connected to the main return "I," which collects all of the condensation from the radiators throughout the building.



Into the end of the low pressure system is connected the high pressure steam main "A," to which is fitted the pressure reducing valve "B," which is fitted with the counterbalance "B1," and with this counterbalance the valve is adjusted to open or close with the fluctuating pressure on the boiler so as to maintain any desired pressure on the heating system at all times.

The main return "I" is connected to the pump governor "F," and "J" is a continuation of "I" between the pump governor and the steam pump.

Inside the round hollow casting "F" is a hollow iron float "G," (which with lever running through bearing on side of "F" is shown in dotted lines) which is normally in the position shown.

From the main high pressure steam main is taken a branch "C," which connects to a throttle valve at "D," and through it to the steam pump by "C1."

Connected to the throttle valve is a lever with a counterbalance "H," and between this lever and the one on which the float "G" is secured, and on the outer end of which is another counterbalance "H1," is a connecting rod, "H2," so arranged as to allow of the easy balancing by the two counterbalance weights of the hollow iron float "G."

The steam having been turned into the heating system through the reducing pressure valve, "B," the condensation comes down through the various returns to the main return "I," and flows up into the hollow shell "F," until the float "G" is raised, the action of which, as will be apparent, will be to pull down connecting rod "H2," and open the throttle valve "D," which allows the full boiler pressure to pass into the steam cylinders of the pump, at once putting the latter into operation, and it will continue to draw water from the returns and the governor shell "F," until the latter has fallen to a low enough level to permit the float "G" to fall into its normal position, and so shut off the steam from the pump, which will, of course, cease to work, and will not start again until the water has risen high enough in the governor to raise the float again as already described.

A connection "K" from the low pressure side of the pressure reducing valve must be made to the top of the pump governor, for the purpose of equalizing the pressure therein, for, as will be clear, water could not rise in the shell or globe if there was no means of escape for the contained air or steam, and, it will be equally apparent, if once filled with water the latter could not escape unless a vent were given, so that as the connection is made to the low pressure side of the reducing valve "B," from which side the condensation comes, the water may find its level without difficulty, as it will be forced in from the bottom against the same pressure as will be exerted against it from the top through pipe "K." Thus the pressure from both top and bottom being equal, pipe "K" is called an equalizing pipe.

There would, under ordinary circumstances, be some waste of steam by the use of the pump, but not nearly so much waste of fuel as there would be if the condensation were allowed to run away, say into the drains, for, as will be obvious, the condensation will, in the apparatus just referred to, be returned to the boiler at a high temperature, where it may be quickly converted into steam again, while if fresh water were constantly used a great deal more fuel would be necessary to heat it up through the greater number of degrees between its normal temperature and that of steam, and, besides, if it contains any lime, as the great majority of waters do, then serious damage may be done to the boiler by the formation of scale therein.

If the whole system has been properly planned and erected there will be very little waste of even exhaust steam from the pump or engines used in a plant, because arrangements will have been made whereby the exhaust will be used to heat the building, and so save the use of direct steam for that purpose, and this phase of steam heating will be dealt with in a future article.

HAMILTON AND TORONTO PLUMBERS ON TRIAL.

EACH week brings new developments in the "combine" investigations, the chief sensations of the past seven days being the evidence of Messrs. Mann and Sullivan, representatives of supply houses, in the Assize Court before Judge Clute. Both of these witnesses went on the mistaken view that they could improve the position of the master plumbers and supply men charged with conspiracy by giving evidence which appeared to be clearly opposite to the facts brought out by other witnesses. Both injured their own reputations by so doing, in addition to damaging the case for those whom they had tried to benefit and bringing unnecessary discredit upon the supply houses by whom they had been employed. Rightly or wrongly, companies are held responsible for the acts of their servants and it is to be regretted, therefore, that the witnesses referred to were not more considerate of their employer's reputations than they were of their own.

* * *

Last Friday the Toronto Master Plumbers' Association held a "summoned" meeting in the Police Court, Police Magistrate Denison calling the roll and excusing a few for non-attendance on account of sickness or absence from the city. About 150 answered their names, however, the majority being represented by lawyers. Charges were withdrawn against several whose explanations were considered satisfactory by Crown Attorney Curry and against some who had given evidence in previous trials. The balance pleaded not guilty to the charges of conspiracy and after a legal controversy over whether evidence given in preceding cases should be accepted in this case, a remand was arranged until Wednesday of this week. On Wednesday, however, a further remand was made until Tuesday next owing to the case going on in the Assize Court.

* * *

The case in Hamilton was proceeded with last week, and after the evidence of Secretary T. H. Davies, secretary of the Hamilton association, was taken, an adjournment was made until the Toronto cases were disposed of. Mr. Davies intended leaving for Florida to accept a position with an amusement company, but was detained as a witness. Before giving evidence he asked for protection, and was guaranteed that anything he might say would not incriminate him. His evidence dealt with the business of his office, he receiving $15 weekly and the annual expense totalling to nearly $2,000 per year. Mr. Davies admitted that the association had disbanded after the Toronto proceedings were started, and that the association's books and papers were destroyed by him then. It was intended to start up again after the Toronto cases were concluded. He said that in tendering on jobs each member submitted his tender to him, and that he averaged the prices. The plumber nearest the average was given the job. Twenty-five per cent. was added to the actual cost of the work, of which five per cent. went to the association, and the rest to the plumbers. After the expenses were paid the money was divided among the members of the association. The initiation fee was $100. Other evidence given before adjournment was unimportant.

* * *

Tuesday's session produced a sensation when Mr. A. W. Mann, of the Canada Brass & Supply Co., London, went into the witness box to endeavor to explain his contradictory evidence given a week before. He then swore that the company had not refused to supply goods to anyone on the ground of their not being members of the plumbers' association, but when confronted with a letter in which he refused goods to certain firms, for that very reason, he swore the letter was true. When the judge demanded a reconciliation of the two statements, he declared that the reason given in the letter was a subterfuge; that the firm's credit was not good, but that he did not care to say so. The judge told him he did not believe him. On Tuesday Judge Clute was unwilling to accept Mr. Mann's explanation, although the latter protested that he desired to tell the truth, and even brought letters into court which the Crown Prosecutors had no knowledge of.

"To have a judge on the bench tell you he didn't believe you was rather a hard blow to a man, and I wanted to explain," Mr. Mann continued.

"I thought you distinctly deserved it, and I think so still," broke in Mr. Justice Clute sharply. "You can leave the box."

* * *

John B. Reeves, W. H. Meredith and B. J. Morris also gave evidence on Tuesday, another witness being Samuel J. Frame, a clerk employed by Jenkins & Hardy. Mr. Frame acted as secretary of the old Plumbers' Supply Association and the Crown Attorney endeavored to show a connection between the old and new supply associations as well as with the Master Plumbers' Association in order to connect all with the conspiracy charge.

The agreement under which the Plumbers' Supply Association firms worked was as follows: "We, the undersigned, agree to form an association to cover plumbers' supplies at a list price and discount, hereafter to be agreed upon." There was a forfeit of $100 for every violation of the agreement and each firm deposited $500 as a guarantee. There were certain of the larger plumbers to whom the members could sell at whatever prices they pleased. Monthly declarations were filed by the members to show that they had lived up to the terms of the agreement.

* * *

Wednesday's sensation was provided in the evidence of Mr. C. A. Sullivan, advertising agent of the Page-Hersey Iron & Tube Company, Guelph. Mr. Sullivan's testimony as given in the daily papers was especially damaging to himself, but letters put into court on Thursday proved that his seemingly unlikely story told on Wednesday was correct. Mr. Sullivan had no power to sell goods and being approached by Guest & Company, a Toronto firm outside the association, he wrote them a jollying letter containing statements which he acknowledged to be false. Judge Clute reprimanded the witness severely, but the company's action in presenting the letters referred to in court on Thursday fully cleared them of any discredit in the matter. Mr. Sullivan stated in his evidence that he had lost his position on account of writing the "jollying" letter.

* * *

On Wednesday the Police Court proceedings took a new turn when proceedings were begun against those groups of plumbers who met, averaged tenders, exchanged I.O.U.'s or otherwise fixed prices.

W. J. McGuire, George F. McGuire, George Clapperton, Jos. Wright, Alex. Fiddes, Henry Hogarth, Alex. Purdy, Wm. Mansell, Watson Mashinter, Fred Armstrong, David Menzies, Patrick J. Hayes, and James H. Wilson were the first group. It was charged that on or about the month of October, 1903, they did conspire, one with the other, or others of them, by deceit or falsehood and other fraudulent means, to defraud the Toronto Bedding Company, Limited, of the sum of $400, contrary to section 394 of the Criminal Code.

Alexander Fiddes, Henry Hogarth, Wm. J. McGuire, Geo. F. McGuire, Robt. W. Harrison, Chas. Robertson, Geo. Wallis, Geo. Clapperton, Joseph Wright, Fred Armstrong, James H. Wilson, Watson Mashinter, A. Welch, Francis R. Maxwell, Herbert Johnson, Alex. Purdy, Wm. Mansell, Kenneth J. Allison, and Wm. J. Williams were arraigned on the charge that in 1903 they did conspire unlawfully, the one with the other, or others, to defraud the municipality of the City of Toronto of the sum of $500.

Stevenson, of Guelph, A. Malcolm, of Guelph, Geo. Clapperton, Jos. Wright, Alex. Purdy, Wm. Mansell, of Toronto, and H. Mahoney, Guelph, were charged in the month of June, 1904, at the city of Toronto, that they did conspire to defraud the Homewood Sanitarium of Guelph out of $800.

Geo. F. McGuire, Wm. J. McGuire, Alex. Purdy, Wm. Mansell, James B. Fitzsimons, K. J. Allison, Watson Mashinter, Alex. Fiddes, Henry B. Hogarth, Robert W. Harrison, Chas. Robertson, Francis R. Maxwell, Herbert Johnson, Jas. H. Wilson, George Walis, James Fiddes, J. E. Gray, George Clapperton, and Jos. Wright were arraigned on the charge of conspiring in July, 1904, to defraud Messrs. Warwick Bros. & Rutter, Limited, of the sum of $1,200.

The cases were adjourned until next Tuesday.

CONCRETE CONSTRUCTION OF BUILDINGS

EVER since the disastrous fire of a year or so ago there has been a steady increase in the number of large wholesale buildings of modern type. In many instances large business houses have exercised most excellent judgment in the erection of their new homes in using only indestructible and non-combustible materials. The illustrations herewith reproduced show views and

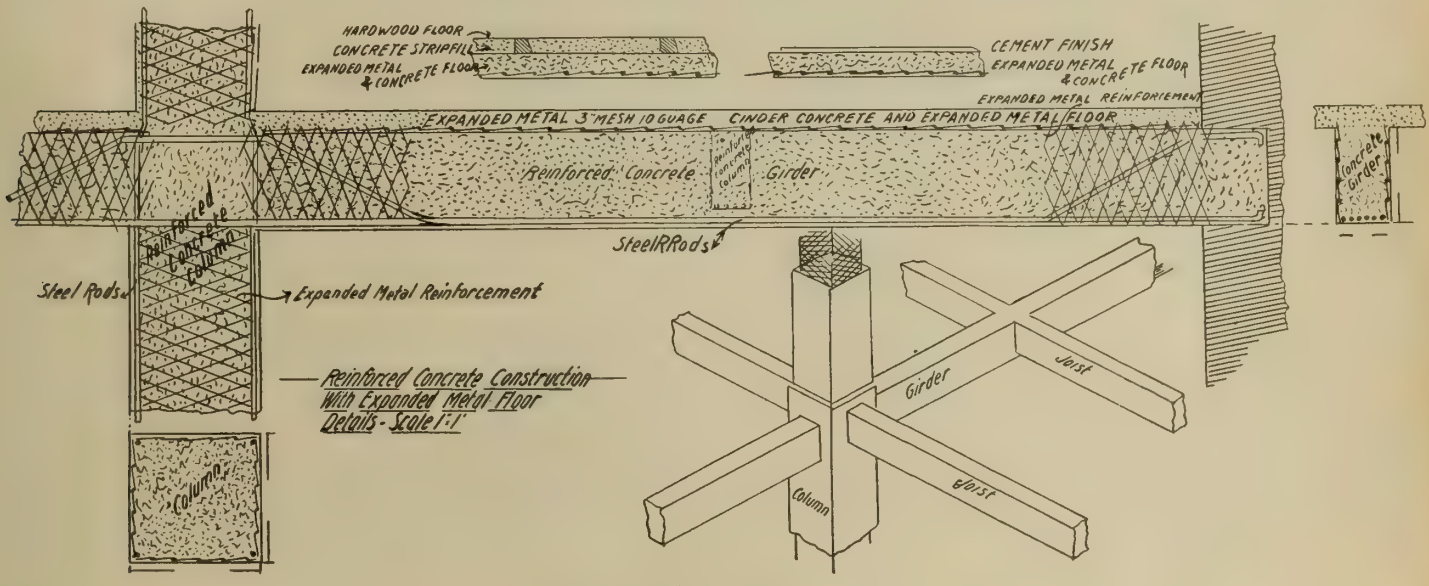


Fig. 1—Details of Concrete Work in Toronto.

umns. The dimensions of the building were 192 feet in length and 42 feet in width, there were four stories and the roof, the heights of same being 10 feet in the basement, and 15 feet, 14 feet 6 inches, 13 feet 6 inches, and 13 feet 6 inches respectively, for the floors above.

The column construction is clearly shown and may be described as having been built of concrete, reinforced with expanded metal and upright bars ; in the same manner the girders and beams were constructed of concrete reinforced with expanded metal and iron bars. The slab of the floor was of concrete and expanded metal only. In Figure 2 is shown the centreing in place during the progress of the work. In Figure 3 is shown an interior view of the finished building. In the construction of the columns and the beams stone concrete was used, while in the floor slabs cinder concrete was adopted. The columns were spaced at distances 16 feet by 12 feet and the building was designed to carry a live load of 300 pounds per square foot. The stairways of the building were encased with 2-foot cementine walls.

Figure 4 reveals the interior of the Dunlop Tire Co.'s factory taken just after the removal of the centreing from the concrete floors. The structure shows brick walls, while the floors and roof are of reinforced concrete ; the size of the building being 200x50 feet, with power house 50x50 feet. The columns and beams are reinforced with three trussed rods, having centre section of 1x2 inches making total reinforcement 6 square inches. These trussed rods are a new design, introduced at Toronto, and are intended to get best possible results with greatest economy of metal. The beams are 20-ft. span, 16x24 inches area. The floor slabs are 16 ft. span, 7 inches thick reinforced with expanded metal, 3-in. mesh, 10 gauge, supplemented with $\frac{3}{4}$-in. round rods. The floors are intended to carry heavy loads, machinery, etc., with capacity of 300 lbs. per square foot safe load.

In Figure 5 is shown another modern idea in construction, being that of fire

give an idea of the method adopted in the erection of a store and warehouse for Brown Bros. some months ago.

In planning for this building the firm asked for competitive bids upon the whole building for slow burning or mill construction as compared with concrete, and they chose the latter at figures practically the same. The system they chose was that offered by the Expanded Metal Fireproofing Co., Limited, Toronto, and the details of their construction are quite clearly shown in the three illustrations, Figures 1, 2 and 3 given herewith. The walls of the building were of brick, with two lines of col-

Fig. 4—Interior Dunlop Tire Co. Factory.

Fig. 5—Fire Protection for Light Wells.

protection of light wells, as exemplified in Toronto building. In a great many buildings of wood interior construction

Fig. 2 Showing the Centering in Place During the Progress of the Work.

the light wells and elevator or stairway openings are a costly hazard from an insurance point of view. By constructing a fireproof enclosure around such openings, owners of such buildings can get a considerable reduction in insurance rates. A great many of these enclosures have been protected by the use of expanded metal placed on channel furring and plastered on both sides to a thickness of 2 inches.

GREENHOUSE HEATING BY STEAM.

A RECENT inquiry in the Florists' Exchange as to how much steam piping was necessary to heat a given greenhouse was answered by U. G. Scollay, of Brooklyn, N.Y., and while the method of arriving at the result was not given, the conditions of the problem and the proportions of the apparatus advised will doubtless prove of interest. The correspondent of the journal mentioned wanted to know how many 1¼-inch steam pipes it would take to heat a greenhouse 30x65 feet, built of wood, lined thoroughly with paper roof and sides (shingle roof), with one 30-inch continuous ventilating sash running along each side and also on the roof, and he also wanted to know what size main it would take. The house is located 500 feet from the boiler. He desired to maintain a temperature of 40 degrees with the outside temperature 10 degrees below zero.

Mr. Scollay's reply was: "You will require 440 lineal feet of 1¼-inch pipe in your house to insure 40 degrees inside with 10 degrees below zero outside. This divided up will give you about seven rows. I would advise placing a valve at each end of each of the six rows in order that you may at all times have the heat under control. This is more necessary in steam than in hot water work, for the reason that hot water may be controlled by the fire in the boiler, while with steam pressure or vapor must be kept up in any event, which makes it imperative to regulate by the amount of surface kept in active use. For the distance these coils are from the boiler I would advise not less than 2½-inch steam main with 2-inch return. I of course assume that it is your intention to thoroughly protect these main pipes. Five hundred feet away from the boiler is a pretty fong reach. While I give you these sizes of mains I am unable to say how they will work in your case, for the reason that I do not know how you will be compelled to run them. There are numberless complications liable to arise, so very numerous, in fact, that it is scarcely of any use for me to speculate on what your conditions are. Candidly, unless the conditions are exceptionally favorable for getting steam to your house and returning the condensation to your boiler, I would advise the installation of a small steam boiler for your house, say of 400 square feet capacity. Possibly you have a large central plant and prefer to take steam from it. If so, be very careful to allow ample height above the water line of your boilers for your coils in order that dry steam may be obtained. Pardon me for suggesting it, but our experience inclines us to hot water for small jobs of this kind, in that regular temperature is more easily maintained. If you should discard the idea of steam and adopt water it would take five rows of standard cast iron greenhouse pipe or its equivalent in 2-inch pipe, say eight lines. A good boiler of 500 square feet would take care of the work nicely. Of course I mean that in case of either steam or water the small boiler would be placed in a pit close to the house."

A go-as-you-please store makes a go-as-you-please statement at the end of the year.

Fig. 3—Interior View of Finished Building.

The respect of his clerks is a producing power that works while the merchant sleeps.

PUBLIC BATHS IN CITIES.

A RECENT decision of the Toronto Board of Education to establish a public bath for children in an unused schoolhouse should start an agitation for similar bathing places in other Canadian cities.

In ancient cities the provision of bathing places for the populace was considered a most important feature of every community. This fact gave opportunity for the exercise of many artistic ideas in designing both interiors and exteriors of bathing places. The same opportunity still exists, although in a greatly lessened extent, in many of our modern cities. Only recently a new public bath house was opened for use in the thickly populated section of Cleveland, which was in every way attractive and well adapted for its uses.

The city of Pittsburg has procured from a well known London architect plans for a public bath, which have been submitted to the public bath committee of that city, together with plans from several local architects. The design from the foreign architect is patterned after similar institutions in Europe and includes a circular swimming pool for men surrounded by baths with a smaller swimming pool and baths for women. The specifications also include rest and reading rooms, giving to the institution a club feature which it is thought will be appreciated. It is proposed to expend $75,000 in the erection of the building, and the enterprise is backed by the civic club of Allegheny county.

HEATING PROBLEMS.

IN several houses in which the system of hot air heating is employed ample provision has not been made for the escape of the cold air, says a writer in the American Artizan. The arrangements for sending the hot air up to the rooms are complete. It is expected that the hot air coming up into the room will force the cold air out. The exit is supposed to be through the cracks of the window or through some door. Very often the systems of heating arranged in this way are found to be inefficient. The furnace is blamed and perhaps the system of piping. The true cause lies in the fact that in order to get warm air in, you must get the cold air out. The egress of the cold air must be provided for by something more than slipshod methods and is not to be left to chance. Efficient heating engineers have used the cold air register for many years and most of them recognize its value. The fact remains, however, that a great many engineers in the smaller towns and in the more isolated sections of the country are partially or wholly ignorant of the advantages to be derived by its use.

It is a well known fact that cold air is denser than hot air and has greater specific gravity than hot air. Cold air will displace hot air whenever possible. Hot air does not rise; cold air shoves the hot air up. In the same way cold air will keep the hot air down in the furnace pipes. In a room, the windows of which are not open and which is sealed or partially sealed in other respects, it is almost always impossible to force the hot air up. In one house there was a good fire in the furnace and only one register was left open. There were no cold air registers. Nevertheless, the room with the open register could not be heated. Such a condition of affairs can be due to no other cause except faulty construction.

A cold air register may be supplied with every room of considerable proportions. This register should be of almost the same magnitude as the hot air register. It is a good plan to run a cold air return pipe to the furnace, connecting all of the branch cold air ducts to the same trunk line. Of course this pipe should be entirely separated from the regular cold air pipe running from the outside of the house. At least one large cold air register is desirable in every house. All of these things are generally known, but, strange as it may seem, they are not generally regarded.

SOME PIPE WRINKLES

WHEN a plumber has finished setting a fixture in a new building where the piping and faucets are nickel-plated, he should take a little whiting and wet it until it is quite thin, says the Plumbers' Review. Then dip a sponge into the mixture and rub it lightly all over the nickel-plated work. He should let it remain until he is ready to leave the building, then rub it off with a piece of flannel, and the plating will shine as bright as if it had just come from the plater's. The whiting will preserve the plate for an indefinite time. When working brass pipe it is sure to become very dirty and stained, and it is difficult to remove the discoloration and renew the brightness. To clean the pipe after it is in place take some fine sea sand, such as masons use when running white mortar. Put it in a pan, wet it, and then take a handful and rub the pipe briskly for a few minutes. A smooth, clean polish will result that will gratify the eye of the customer. If it is carefully dried while it is still bright a coat of colorless varnish will protect it from the air and keep it bright a long time.

VALUE OF SPRINKLERS.

THE value of sprinklers as a means of protecting factories from destruction by fire is generally known, and their use has become quite general. The cost of their installation is heavy, however, and in consequence the erection of fireproof factories is receiving much attention. A combination of heavy walls, concrete floors, roofs, staircases and elevator shafts, with glass windows and metal window frames, costs but little more than the old factory construction of brick and wood. The sprinkler makers have been, until recently, in a trust, but an independent corporation, which lately entered into the business, seems to have won much favor with architects, owners of buildings and capitalists. Some time ago a proposition was made to a manufacturing company in Michigan to equip their plant with sprinklers, the company furnishing them agreeing to accept in payment for the same the amount saved in the premiums held by the company after the service had been installed, over the old rate, for the period of seven years. The company proposed that the amount of the savings for seven years on account of the reduced rate accorded a sprinkled over an unsprinkled plant, be accepted by the company in settlement for their account upon the completion and acceptance of the sprinkler system. This was agreed to and a contract was entered into upon the terms mentioned.

A PLUMBERS' AVENUE.

COTTER BROS., plumbers, Winnipeg, have moved into commodious quarters in their new brick block, corner Fort street and St. Mary's avenue. The new store is a four-storey brick building, 35 x 120 feet, designed particularly for a plumber's shop, having a draughting room, brass, pipe, iron and repair rooms on the ground floor, besides well arranged offices and a very fine showroom. In the basement are the stock and storage rooms. The upper floors will be used exclusively as bachelor apartments and will have a large number of rooms. The building has all the latest modern conveniences.

Cotter Bros. employ about 70 men, and have been in business in Winnipeg for thirteen years, and have secured such extensive plumbing contracts as the Union Bank Building, and the new post office. A suitable name for Fort street now would be Plumbers' avenue, as there are located on this street no less than four plumbing establishments.

THE PLUMBER WON.

A plumber and an upholsterer were recently engaged in fitting up a swell residence in the west end, and got into a discussion as to which was the heavier, a pound of lead or a pound of feathers.

"I'll bet you a half dollar that I can prove to you that a pound of lead is heavier than a pound of feathers," said the plumber.

"I'll take that bet," said the upholster.

The plumber cut a piece of lead pipe and pared it down until it weighed sixteen ounces. Then he got from the upholsterer the same weight in feathers.

"Now, said the plumber, holding the lump of lead in his right hand and the bag of feathers in his left, "let me drop the lead on your left foot and the feathers on your right, and if I don't prove that the lead is the heavier I'll pay you half a dollar."

The man of feathers would not consent to the trial, but paid for the whisky and cigars.

PLUMBING NOTES.

New Liskeard may install a system of waterworks shortly.

London proposes to spend $251,000 in improving its water supplies.

A. A. Earl, plumber, 1099 Queen street west, Toronto, will shortly move into larger quarters.

Goderich is to secure an engineer's report on the best methods of improving its water supply system.

Peterboro has decided to spend $15,000 on waterworks and $4,000 on extending its sewerage system.

R. Cunneyworth has opened a plumbing stock at 627 Queen street west, Toronto.

St. Catharines proposes to spend $20,000 in extending its sewerage system.

A. J. Miller has opened a plumbing and heating shop at 715 Queen street west, Toronto.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, December 8, 1905.

PRICES for plumbing supplies have remained quite unchanged during the past week, but the continued strength of lead in the primary markets has confirmed the impression that present figures on lead pipe will have to be advanced very shortly. This will make no serious impression on the trade, however, as orders for this class of goods are falling off at this season.

The Winter having fairly set in, plumbing contracts now on the tapis are being hurried to completion and the rest of the season will be confined to miscellaneous jobbing. In consequence, there is rather less activity shown than last week.

Many dealers are still reporting shortage in several sizes, a fact which would tend to keep prices firm, altogether aside from the obvious strength of the market.

Range Boilers—Conditions remain the same as before, with demand fair and prices firm. We quote as follows: Iron clad, 30 gallon, $6.00, and 40 gallon, $7.50 net; copper, 30 gallon, $22.00; 35 gallon, $24.00; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—Owing to the phenomenal price now commanded by pig lead, it is thought to be a matter of but a very short time, before pipe will be sharply advanced. Meanwhile, we are quoting as follows: Discounts twenty-five per cent f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—The scarcity is rather more pronounced this week, and ruling prices are held very firm. We quote: Discounts on all sizes of nipples up to 6linch, 67 1-2 to 70 per cent.

Iron Pipe—Many jobbers complain of a short supply in particular sizes. Prices are unchanged, and we quote: Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $5.50 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.: 1-2 inch, 71 1-2 per cent.; 3-4 inch, and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15,000; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 71 per cent., and for galvanized 61 per cent.

Soil Pipe and Fittings—Sales are holding out well in the advanced season and we are still quoting: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent off.

Solder—No change has taken place in prices, but as lead and tin are both stronger, the price given last week is decidedly firm. Our quotations are: Bar solder, half-and-half, guaranteed, 22c.: No. 2 (wiping solder), 18c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto December, 8, 1905.

A DROP in the prices of galvanized iron range boilers, of 30 gallon and larger sizes, and a continued stiffening in the prices of iron pipe are the features in the week's market report. Lead pipe continues very firm, but no further advance is recorded.

Some dealers report a slight falling off, but all say there is a large business still doing. Some roughing in work on new buildings is being done, but most orders are for finishing materials. Last month was far ahead of a year ago and this year's total will be a record breaker.

Lead Pipe—Prices continue very stiff, but no change is reported. Business is active. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 25 per cent.

Soil Pipe and Fittings—Buying is very active with prices very firm. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe—Quotations are slightly higher. Business is lively and the market is stiffening. We quote the following prices: Black, 1-4 inch, $2.09: 3-8, $2.09: 1-2 inch, $2.42: 3-4 inch, $3.04: 1 inch, $4.37: 1 1-4 inch, $5.96: 1 1-2 inch, $7.15: 2 inch, $9.54: 2 1-2 inch, $15.00; 3 inch, $19.35: galvanized, 1-4 inch, $2.91: 3-8 inch, $2.91: 1-2 inch, $3.29: 3-4 inch, $4.19: 1 inch, $6.02: 1 1-4 inch, $8.21: 1 1-2 inch, $9.85: 2 inch, $13.14: 2 1-2 inch, $21.45; 3 inch, $28.05.

Iron Pipe Fittings—Trade is quite active owing to the heavy demand for heating supplies. We quote: Cast iron, elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hookplates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Galvanized Iron Range Boilers—Prices have dropped on some sizes. Buying is quite active, however. We quote as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11.00; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29: extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

Solder—Business is active. Prices steady. We quote: Bar solder, half-and-half, guaranteed, 21 1-2c. and wiping at 20c.

Enameled Ware—Stocks are scarce and orders heavy. We quote. Baths, rolled rim, 5 feet, 2 1-2 inch rim, first quality, $18.65; special, $16.65; 3 inch rim, first quality, $19.15; special, $18.15; 5 1-2 feet, 2 1-2 inch rim, first quality, $20.15; special, $18.15; 3 inch rim, first quality, $21.65; special, $19.65. Lavatories, discounts, first quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, first quality, $2.55; special, $2.40.

A GROWING CONCERN.

WITH shops in Toronto and Peterboro, the recently incorporated Thorn Plumbing Company, Limited, capitalized at $20,000, is now in good shape to extend its growing trade. The taking in of new capital has allowed a larger stocking up of material and outside jobs are being booked, A. J. LeFay, of the Peterboro branch, now being at work on a steam heating system being installed in a hotel at High River, Alberta.

The Toronto office has handled some large contracts, the plumbing system of the new A. A. Allan building on Bay street being a recent one. Mr. J. H. Thorn is president and general manager of the company, the secretary of the Toronto branch being T. A. J. Hunt. The Peterboro branch is managed by A. J. LeFay, the secretary being A. J. Jackson, recently of Toronto.

A good cement for metal joints consists of ground white lead worked up with enough powdered red lead to bring it to the consistency of putty, boiled linseed oil being finally added.

MERRELL COMBINED HAND AND POWER MACHINES

These machines are our portable hand machines, mounted on base and driven by compound gears with cone pulley, and are so arranged that either hand or power can be used at will, or the machine can be readily taken from its base and used as a portable hand machine. The chasers are set by graduation to any size desired, are released while the machine is in motion, opened to permit of pipe being cut off, and closed instantly and positively, one set being used to thread several sizes of pipe. They can be sharpened by grinding and are readily replaced by chasers cutting any style or pitch of thread, either right or left. **Four sizes—Nos. 5½, 6½, 9½, 11½.**

CLEANING RUSTY PIPE.

At the annual meeting of the Pacific Coast Gas Association in San Francisco an interesting experiment on the cleaning of rusty pipe was described. Some plain and steel tubing for use in high pressure lines came from the factory to the point of shipment on flat cars, and in consequence was badly rusted before it could be placed under cover. Cleaning machines not being available, a part was cleaned by hand and the finding of efficient tools proved a serious problem. Coarse and fine files were not much of a success, because they would not clean out pitted spots and irregularities in the surface of the pipe without removing valuable metal. Emery cloth and sand paper did not last long enough to make a showing. Steel wire casting brushes proved quite efficient, coarse brushes being used to loosen the larger pieces of scale and rust, and fine brushes to work into the pits and clean the dust off. Soft red brick, such as would be used only for filling, and furnace slag were found excellent, the fine particles working into the pitted spots and irregularities as they broke off. The dust left can best be removed by a fine wire brush, leaving the surface of the pipe clean and bright, ready for receiving the paint.

LOSS OF HEAT FROM IRON PIPES.

A PAPER was recently delivered before the Canadian Society of Civil Engineers by R. W. Leonard on the above subject. The author speaks of the loss of heat from pipes carrying warm water and goes on to say that he made experiments on 1-in. and 2-in. pipes, black, and rusty black, or ordinary type, 1-in. pipe and 28 and 26 gauge, or 0.016-in. and .018-in. thick on 2-in. lap-welded boiler tube and 1-in. welded galvanized steam pipe. The pipes were filled with warm water and exposed to air. A 2-in. black pipe 0.154-in. thick, containing 5 lbs. of water, had a surface of 2.20 square feet, being 3.54 ft. long. It cooled from 142 degs. Fah. to 32 degs. Fah., and lost heat at the rate of 124 British thermal units per hour in still air at 7 degs. to 10 degs. Fah. Cooled from 126 degs. to 32 degs., the loss was 112.6 units under the same conditions, and 217.3 units in an air current of 8 to 12-in. per second at 5 degs. to 7 degs. Fah. of temperature, thus showing the extreme importance of non-movement. In water at 32 degs. Fah. the same pipe lost heat at the rate of 309 units per hour when cooled from 126 degs. to 32 degs. and at 269 units when cooled only from 116 degs. to 32 degs. In a current of only 1½-in. per second of water at 32 degs., and cooling from 116 to 32 degs., the loss was as high as 849 units per hour. Cooled from 142 degs. to 32 degs., a 2-in. pipe only 0.095-in. thick cooled at the rate of 136.7 units in still air of 7 degs. to 10 degs., of 385 units in still water at 32 degs. Fah., and of 1,005 units in a current of 1½-in. per second. Thin galvanized pipes lost heat at higher rates, and thin-tinned pipes at still higher rates. The figures obtained are consistent.

In every town there is some demand for small electrical goods, such as bells, search lights, batteries, etc. Get after this business.

——— the pipe with the brand IN it———

We ***must*** be sure of our pipe's quality to brand a trade mark into the hot metal itself.

The point is to get ***you*** as sure of P.-H. Pipe as we are—that's why we brand it where you can see the brand.

No dodging responsibility then, is there?

When you make up your mind that quality in pipe is worth paying for—and that nothing but quality ***is***—then we will show you that ***absolute*** quality doesn't imply higher cost.

P.-H. Pipe, even with the guarantee back of it, competes in price with the may-be goods. Will you read the book that tells why? Your copy waits for your call.

Do not Bear the Burden of Another Man's Defects

That's sound business advice.

You can have trouble enough without shouldering the blame of a weak, defective, unsatisfactory heating system.

It is good business policy to recommend and instal the

OXFORD HEATING SYSTEM

because it is economical, durable, efficient, satisfactory in every way. A no-trouble heating system, through and through.

Most dealers know just why the Oxford Heating System is superior.

It yields as big a margin of profit as an ordinary system. It makes your patrons your friends. It increases your volume of business and confirms your reputation as a dealer who will handle only the best.

The Oxford ("B" Series) Boiler is as much superior to the ordinary boiler as the light of the sun is superior to the light of the moon. The improved fire-pot construction, by which the upper walls overhang the fire, is the most practical advancement made in boiler construction in years. The heat sharply impinges against these overhanging surfaces, adding very largely to their heating capacity. This, in conjunction with the extra deep first water section, with bell-shaped flues, makes the Oxford Boiler the most powerful and economical heating apparatus ever manufactured.

Our method of making all connections, smooth tapered steel nipples pressed into smooth tapered holes, obviates the use of gaskets and washers and assures a permanent, no-leak, iron-to-iron joint.

Oxford Steam and Hot Water Radiators

used with Oxford Boilers means efficiency with economy, beauty with comfort, absolute satisfaction and many good words for you.

Send now for the Gurney Oxford Book of Steam and Hot Water Heating Apparatus.

WE also manufacture Cast Iron and Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges, Warm Air Furnaces and all kinds of Cooking and Heating Apparatus, Plumbers' Supplies.

MUELLER COMPRESSION WORK

SPECIAL GRADE BIBB

c-235

A bibb that delivers a spreading stream may cause no criticism from some people, but if you install one of that sort for a critical customer he may comment on it so unfavorably to others as to do you a business injury.

In Mueller Compression Bibbs the nose is designed with such a taper that it delivers the stream solid. The most critical customer for whom you install one can comment on it only to your business interest.

Mueller Compression Bibbs are made in standard, extra and special grades, in plain or hose patterns and in all styles of pipe connection. The bibb illustrated is the extra grade, plain pattern and S.O.T. style.

All Mueller Bibbs bear the Mueller trade mark and are *unconditionally guaranteed.*

We also make ground key work and fuller work for plumbers' use. Catalogs upon application.

Clauss Brand

Fully Warranted

Paper Hangers' Shears

Hand forged from finest steel and welded on our composition metal, hardened in water and tempered by natural gas. This shear is made purposely for paper hangers' use, and is more durable than other of its kind on the market. We call special attention to this Shear. Japan handles and finely finished blades. Ask for discounts.

Books for Plumbers, Steam Fitters, Etc.

Furnace Heating

By W. C. Snow.

The author has prepared a book of reference for the furnace man or the architect. There are tables which have been tested by years of practical use. They are of great value to the practical furnace man.

170 pages, 6 x 9 in.; 90 illustrations; cloth bound.

Price, post paid, - - $1.50

(This book has had a heavy sale in Canada.)

* * *

Kitchen Boiler Connections.

A selection of practical letters and articles relating to water backs and range boilers.

The work is divided into two parts, the first on water backs and boilers and their connections, and the second on heating rooms from range boilers, a topic that has much practical interest to the plumber. There are few lines of work where so many little difficulties arise, and therefore the discussion of different questions which have arisen should be of great interest as well as practical value to workers in this line.

Fifth enlarged edition; 194 pages; 6 x 9¼ inches; 113 illustrations.

Cloth, post paid, - - $1

* * *

Formulas and Tables for Heating.

Being German formulas and tables for heating and ventilating work, for those who plan or erect heating apparatus. By J. H. Kinealy, M.E.; 56 pages; 4½ x 7 inches; leather.

Price, post paid, - - $1

* * *

American Sanitary Plumbing

By J. J. Lawler.

For plumbers, steam fitters, architects, builders, apprentices, etc. Containing practical information of all the principles involved in the mechanics and science of modern plumbing, illustrating with original sketches the fundamental principles of everything the plumber should know. Everything explained in the most simple language, so that it will be impossible to misunderstand anything.

Large 12mo, cloth, post paid, - $2

Steam and Hot Water Fitters' Text Book.

A book prepared for the Steam and Hot Water Heating Course at the New York Trade School, with supplementary chapters on house heating, specifications and surface estimating; by Thos. E. McNeill.

This book will be appreciated by those who wish to master the principles of steam and hot water heating. The definitions in the beginning deal with the appliances, and little by little the reader is led on until at the close he is informed how to figure surfaces, lay out plans and install heating apparatus with the necessary piping.

140 pages; numerous illustrations and diagrams; 5 x 7 inches.

Cloth, post paid, - - $1

* * *

Plumbing and House Draining Problems

A selection of articles for practical plumbers.

This volume provides reliable and practical information for ready reference and assistance to plumbers who are confronted by problems with which they have had no previous experience. One-half of the edition is devoted to new problems and special articles. This book will prove a valuable reference in any plumber's library.

297 pages; 6 x 9 inches; 146 illustrations.

Cloth, post paid, - - $2

* * *

Practical Gas Fittings.

Describing how to run mains, lay pipes and put up gas fixtures. 116 pages; 54 illustrations; 5¾ x 8 inches.

Cloth, post paid, - - $1

* * *

Practical Hints on Joint Wiping.

A book containing articles on practical joint wiping for beginners in plumbing, with an appendix giving a selection of practical letters and articles.

66 pages; 5½ x 8; 41 illustrations.

Paper, post paid, - - 25c.

About a Horse Nail.

"A little neglect may breed great mischief; for want of a Nail the shoe was lost; for want of a shoe the Rider was lost—being overtaken and slain by the Enemy—all for want of care about a Horse-Shoe Nail."
—Benjamin Franklin, 1758

A few words about ourselves and our "C" brand horse nails.

This Company was established in 1865, and we have therefore been manufacturing horse-shoe nails for 40 years. We make nothing else, and are the largest producers of horse nails in Canada.

Our "C" brand horse nails are of one quality only—the best that our long experience can produce. We use for their manufacture exclusively a special quality of material, made for our purpose in Sweden, which is the best procurable in the world, or used by any maker of horse nails.

We use the old and well-tried hot forged process, by which the nails are thoroughly forged by special machines from the nail rods at a white heat, and finished and pointed by a mechanical process used only by us in Canada.

Every nail is hand sorted and examined, to prevent any imperfect nails from entering a box bearing our "C" brand. Every box is therefore warranted perfect and ready for immediate use.

Our nails are of the best designs and proportions for Canadian use. They will drive easiest, and stand more hard usage than any other horse nail made or sold elsewhere.

We solicit your kind preference for the "C" brand horse nails when ordering.

We shall be glad to furnish free samples of our various patterns to farriers or dealers.

WHAT IT DOES

No matter how narrow the street or alley, nor how high the walls of opposite buildings,

MAXIMUM LIGHT GLASS

will introduce the light (provided there is sky to draw from) and make the interior space as bright as if it were a corner room overlooking wide streets.

As the cost of installing the glass is but a trifle, in comparison with the benefits given, it is reasonable to suppose that all builders and building owners interested in good construction will be interested in MAXIMUM LIGHT GLASS.

This "interest" is likely to go beyond an "enquiry." It is likely to produce a sale.

Don't you think there are enough builders and building owners in your town to warrant you writing for samples of the glass and our Booklet? We will send them to you free.

THE TARIFF COMMISSION IN THE WEST

POINTS OF INTEREST TO THE HARDWAREMAN

ON December 4th and 5th the Tariff Commission held its long postponed sessions in Winnipeg. Business men showed keen interest in the proceedings and all were given a courteous hearing by the commission. Hon. Mr. Fielding displayed a remarkable knowledge of trade conditions, and his keen searching questions were favorably commented upon by the business men present.

On the opening day almost the entire time was occupied by the farmers whose spokesmen argued strongly for a general reduction of duties. They were willing to forego all duty on farm products in return for a reduction of the duty on some manufactured products mentioned. They asked for free lumber, fence wire and binder twine, and for a reduction of the duty on cement. They also asked that the duty on agricultural implements, machinery and wagons should not exceed 15 per cent.

Tuesday Sessions.

On Tuesday the manufacturers and business men had their innings.. J. H. Ashdown addressed the commission on the question of dumping and spoke in part as follows:

"So far as known no question of dumping ever arises unless the product is controlled by a combination or monopoly in the United States. The price to the Canadian trade before the enforcement of the so-called dumping clause was the same as to other foreign trade, and was in no case that we know of, less than a fair value. The operation of the dumping clause as a rule injures the consumer and benefits no one except it be the American manufacturer, who generally raises his price accordingly. While these clauses are on occasion extremely unjust, as well as annoying in their operation to the importer, after inquiry we know of no case in which they have benefitted the manufacturer by preventing importation. In case they are still to continue, then we would ask that they be amended to allow of a margin to the Canadian dealer of at least 7 1-2 per cent. below the home price, instead of 5 per cent. as at present, and a graduated scale between that and 10 per cent. before any forfeiture of the difference is caused. That all freight allowances made to the Canadian importer by the manufacturer be allowed provided the same does not exceed that allowed to any portion of his home trade and does not exceed the rate of freight to Canadian destination.

Mr. Ashdown spoke also in regard to cement. He said the rate of duty on the importations of this season is 47.65, or nearly 48 per cent. In view of the facts that cement is increasingly largely used in foundations and superstructures of all kinds of business, and that the Canadian manufacturers are not able to supply the market, he urged that it might fairly be considered as raw material, and that, in view also of the fact that the freight charges are of themselves a very material protection to the home manufacturer, cement should be placed on the free list; otherwise, if Portland cement were not placed on the free list that the rate of duty should be lowered so as not to be more than 10 per cent. of the value. In case the present, or any duty on cement is continued, he asked that a refund be allowed on the value of the sacks returned, provided they be returned within six months of their importation. There had been imported this year 180,000 sacks of cement; of these 60,000 had come in before the special duty on sacks was imposed; since then $3,002 had been paid on 120,000 sacks. Some 90,000 of these sacks had been again exported, and under all ordinary rulings a rebate should have been had on these, but it had not been applied for because they had not been returned within 30 days as required, for the reason that this was impossible.

In answer to the chairman, Mr. Ashdown stated that the 48 per cent. had been paid in the actual importations on values approved by the customs.

Manufacturers' Views.

On Tuesday afternoon a hearing was accorded the Manitoba branch of the Canadian Manufacturers' Association. The manufacturers present were L. C. MacIntyre, E. F. Hutchings, E. L. Drewry, T. R. Deacon, G. F. Stephens, For the most part their representations were general in their character, the speakers contenting themselves with arguing generally the benefits to the west of the industries which protection would foster.

L. C. MacIntyre.

L. C. MacIntyre was the first to address the commissioners and he spoke in part as follows:

"As vice-president of the Canadian Manufacturers' Association for Manitoba, I take pleasure in introducing a few of the manufacturers of Winnipeg. While some of those present may have special cases to lay before the commission, our main purpose in coming here to-day, is to express our belief in a reasonable increase in the general protective tariff, as a means of building up varied industries in Canada, affording employment for all classes of our citizens and creating a home market for our farmers, while at the same time giving a preference to goods of British manufacture.

"There is a mistaken notion in the east, that the west must always be a purely agricultural community. We believe that the natural resources of the west are such that it may have interests as varied as those in the east. It will take time to establish them, but the higher the tariff against the United States is made, the more quickly will industries of all kinds be established in the west.

"We believe that the people of the Canadian west should do their own manufacturing so far as possible, but when we cannot get what we want right here at home, we think that our fellow Canadians in Eastern Canada, who are helping us in building up and developing the west, should get a preference over all outsiders. If we cannot get what we want, either in the Canadian west or in Eastern Canada, we should then seek what we want in Britain, in preference to foreign countries.

"We do not pretend to advise the commission how high the tariff should be, but it should be high enough to cause many of the great manufacturing companies of the United States, who are now selling large quantities of goods in Canada, to establish branch factories in this country. If the Government will do this much, we think the cities and towns of the Canadian west will be able to convince American capitalists that a good many of the branch factories should be located west of Lake Superior.

"The building up of factories throughout the Northwest, will make mixed farming profitable. Continually growing nothing but wheat will in a few years exhaust the soil. However, bad years for wheat may come, even before the soil is exhausted. The farmer who is able to sell meat, milk, butter, eggs and vegetables in local markets will not be ruined by a failure of the wheat crop.

"Mr. Andrew Graham, who addressed this commission yesterday, arguing against protection, said that mixed farming was most profitable and that exclusive wheat growing cannot be profitably continued very long. Mixed farming is an impossibility except in a country having home markets. It is a well known fact that mixed farming is most profitable in those districts which are close to manufacturing towns.

"With reference to the price of agricultural implements, I have seen it stated very positively that, although the

cost of transporting agricultural implements from Toronto to England is less than from Toronto to Winnipeg, the price of agricultural implements is considerably higher in free trade England than in Manitoba. There is no duty on agricultural implements in England. I have not myself verified this statement, but no doubt the commission could without difficulty ascertain whether it is true or false. If it is true it completely knocks out the argument that protection always enhances prices.

"No doubt we will always continue to buy a good deal outside of our own province and it will pay us better to buy from the eastern provinces or from England, than from foreign countries, because our surplus crop must go eastward over Canadian railways, and if the railways bring back manufactured goods they can afford to carry grain cheaper than if the cars came back empty. Moreover, our farm products are almost entirely shut out of the United States by their high tariff, whereas we can send our products freely to the eastern provinces of Canada. We would not think it advisable for the Government to take any steps to reduce the tariff.

"The era of prosperity that we have enjoyed for the last number of years must show them conclusively that their tariff policy has been to the best interests of the country, and I am pleased to say that the farmers of the great western country are sharing in this prosperity. I know farmers in Manitoba that show a net profit of seven thousand dollars for their year's labor, and also farmers that bought farms and paid for them with proceeds of one year's crop. It is not all sunshine for the manufacturer. There is keen competition in all lines, and it is only by careful management that a profit is made."

Protection for Machinery.

Mr. T. R. Deacon, who followed, spoke with special reference to boilers and machinery, protesting against any reduction of the tariff, and advocating protection as the only means by which Canadian manufactures could be built up. Protection, he believed, did not necessarily mean an enhanced price to the consumer, and if the farmers wanted a reciprocal tariff, that could be best brought about by meeting hostile tariffs with similar hostile tariffs. The American tariff made it out of the question for his firm to send boilers and machinery into the United States, but large quantities of these goods were imported by western Canada, and the manufacturers in this country had only an infinitesimal portion of the market. One advantage which the manufacturers at Minneapolis and St. Paul had, was a favorable freight rate on their material, the rate per 100 pounds being 29 cents from Pittsburg to Minneapolis, a distance of about 1,500 miles, against 71 cents from Pittsburg to Winnipeg, which was only 450 miles further. The only advantage which the Canadian manufacturer had was the difference in the tariff on his material and his finished product, which was only 15 per cent., boiler plate paying 10 per cent. duty and the boilers 25 per cent. Against this had to be set the heavier freight rates, the cost of bringing mouldings and fuel from a distance, and dearer labor, which, between them more than eliminated the margin in his favor.

Replying to questions by the commissioners, Mr. Deacon said labor amounted to about one-third of the cost of a boiler, and he had to pay more for labor in Winnipeg than the manufacturers in St. Paul and Minneapolis, because in the American shops more unskilled and boy labor was used. About 100 men were employed in his shops, and there were two other similar concerns in the city. They were not supplying anything like the whole local demand. If the home market was secured for them, they could treble or quadruple their plant, the capital being at their disposal when needed.

E. F. Hutchings.

E. F. Hutchings had no special requests to prefer on behalf of his own business, but he argued strongly that every assistance should be given to the manufacturers of the west. He recall-getting 95 cents, $1.00 and $1.10 a dlerv line was imported from the United States, but the Canadian Government imposed a duty which swept American goods out of the market and built up a strong Canadian industry.

G. F. Stephens.

G. F. Stephens considered a protective tariff an absolute necessity. He made little complaint regarding the tariff as a whole as it affected the paint, oil and glass trade, but he pointed out some anomalies. Last session a duty of 30 per cent. was imposed on dry white lead for grinders' purposes. The president of the new lead works in Montreal had assured him that it was not the intention to raise the price, but nevertheless there had been a sharp advance. It was an anomaly that, while the duty on white lead is 30 per cent., the duty on paint is only 25 per cent. It was also an anomaly that putty, largely composed of linseed oil, should come in at 20 per cent. The manufacturers of mixed paints had, thus, no protection at all. Farmers in Manitoba have been getting 95 cents, $1.00 and $1.10 a bushel for flax seed, while in the United States $1.50 to $1.60 is paid. There is a high duty on flax seed going into the United States, and a low duty on flax seed coming into Canada. Farmers in Canada are asking for free trade, while farmers in Minnesota and Dakota are getting 40 to 50 cents a bushel more for their flax seed.

The chairman remarked that the American duty of only 25 cents would not account for this difference.

Asked if the product here was increasing, Mr. Stephens said that enough was grown for the need of the country and considerable for export. It was crushed here. Asked how the cultivation paid, he pointed out that there is this advantage. The ground could be plowed in the Spring and the seed sown on first breaking, and a fairly good crop grown.

The chairman remarked that, as a general rule, the commission was not asked to advance duties, but was asked not to increase them, but in this instance it was stated that prices had been increased.

Mr. Stephens understood this had been done to help British Columbia, and the price of lead all over the world had gone up.

The chairman asked whether the manufacturers had not taken advantage of the increase of duty.

Mr. Stephens, in answering, said he had never seen a manufacturer yet who did not get all he could. He thought a business that could not prosper with a duty of 40 per cent. had better be cut out.

E. L. Drewry, chairman of the Manitoba branch of the Canadian Manufacturers' Association, reminded the commission of his evidence at the last visit of the commission. He was waiting anxiously for the result of the commission to see if there would be anything done towards keeping out American lager. In general he could agree with everything that had been said. No one had any special grievances. All had spoken on the lines of building up the country. In Winnipeg we must be looking forward to the establishment of a manufacturing centre. To lower the tariff and alter existing conditions would seriously interfere with the progress of the west, and with the whole of Canada. The future of this country is bound up in its being able to manufacture all that is wanted in the west. If the commission, after thorough revision, could see their way clear, there might be cases in which the duty was sufficient to protect, and in others they might raise the duty where it was required. The local branch of the manufacturers' association felt they could not do better than re-affirm the resolution of the parent association. It was a splendid idea, that of a commission visiting different parts of Canada, and studying the local conditions.

L. C. MacIntyre, chairman of the representation from the manufacturers' association, thanked the commission for the kind hearing and expressed the hope that they would take to heart the words they had heard. He said that without manufacturing interests the country would not prosper, but it was bound to go ahead if its manufactures were protected.

It is time to turn the attention of the sporting goods trade from football goods and ammunition to gymnasium pharaphernalia. How many exercisers could you sell if you tried? Or sets of boxing gloves, or foils and masks, or punching bags, or basket ball material? Isn't there a demand for some of these things, at least, in your town?

JUSTICE OF ESTABLISHED PRICES

By O. A. Keyser, in National Hardware Bulletin.

CO-OPERATION for profit—that expresses the underlying principle of all mercantile associations.

Every business man is in business to make money. If conditions become such that the money-making possibilities of a business are jeopardized, immediate steps are taken to remove those conditions altogether or to limit their harmfulness.

The worst enemy of profit is undue competition. When my competitor acquires such an advantage over me that my chances of making money are limited or imperilled, I must endeavor to overcome my competitor's prestige or remove myself from the sphere of his competition.

There are two sure ways by which the retail dealer can overcome unfair competition: first, by selling goods which his competitor cannot get; second, by selling goods which his competitor cannot sell at less than a certain fixed price.

Since the retailer must buy manufactured goods, it is evident that he must look to the manufacturer for assistance in keeping certain goods out of the hands of his competitors and for establishing fixed minimum prices. It is, therefore, evident that the retailer needs the co-operation of the manufacturer.

Right here it may be said that the manufacturer is not forced to distribute his goods through any particular channel. He may have reasons to place the distribution with one or more classes of trade. If he finds that course most advantageous to himself, he will doubtless continue in it. On the other hand, if the class of trade with which he had entrusted the distribution of his goods does not do the line justice or does not appreciate the privilege of distributing the line, the manufacturer is not compelled to limit his output to that particular class. However, the manufacturer is only too willing to co-operate with the distributor who will reciprocate by pushing his line.

As far as the retail trade is concerned, the manufacturer will be a friend or a foe—just as retailers in general decide. If the retail hardware dealer, for instance, appreciated the policy of a manufacturer who keeps his article out of the hands of catalogue houses and establishes minimum retail prices, it is natural that this manufacturer will continue his policy and co-operate with the retail hardware dealer as much as possible.

In establishing prices, the manufacturer must bear several things in mind. He must price his line with respect to its intrinsic value. He must vary the price according to differences in freight tariff. He must fix prices that will insure a profit to himself and at the same time leave a good margin of profit for the dealer.

If the prices are just and fair according to these conditions, the dealer should at all times see to it that the prices are not violated either by himself or by his fellow tradesmen. Since minimum prices are established by the manufacturer for the protection of the retail dealer, it is only reasonable that the manufacturer should expect the retailer under all conditions to respect these prices. To violate a liberal policy is, to say the least, a small and ungrateful act. It belittles a dealer in his own eyes and in the estimation of his business associates.

Sometimes a dealer excuses his price-cutting on a certain article by saying that Bill Jones, up the street, offered that article below the minimum price. Such an excuse is a poor one and shows lack of thought on the part of the dealer who makes it. Why not write to your jobber or the manufacturer before meeting a cut price? Perhaps the matter can be soon adjusted. Your price-cutting doesn't remedy matters, but makes things worse.

For instance, Bill Jones, up the street, sells an article below the minimum price. Now, John Smith thinks that he has to meet this price. Bill Jones, not to be out-done, makes another cut. Then John Smith follows suit. Soon Bill gets his selling price down to cost and John has to sell at a loss to go him one better. Now wait, gentlemen. What good does it do? If you have to sell at cost or below, why not close up your shop and go into retirement before your savings are exhausted in this game of cut-throat competition.

Be reasonable. When a manufacturer will leave nothing undone to insure a profit for you, don't spoil the whole thing by slashing prices into smithereens. Ask the manufacturer to arbitrate the matter, and he will be only too glad to do so.

The manufacturer of a patented article has a legal right to enforce the maintaining of the prices which have been established by him. Patent rights are granted in order to encourage the making of useful inventions. The only profit that an inventor gets out of his invention is that which comes from having the sole right to manufacture and market it. If an inventor were not protected in this matter, he would not have any inducement to think out problems and appliances that promote the welfare of humanity in general.. The invenor is a public benefactor and deserves a reward for his effort.

Now, if everyone could manufacture a new invention as soon as it is placed on the market, what incentive would inventors have to think out new appliances? It is to place a premium upon invention that the Government gives the patentee of an invented article a monopoly as far as the making of that article is concerned.

Furthermore, of what value would this monopoly be to the patentee if he could not profitably market the article which he had invented? Suppose that the trade in general would slash the price until there would be no profit in distributing it to the public. What good would it do the patentee to manufacture his invention if its selling price has degenerated to the cost of production? It therefore stands to reason that the patentee's monopoly must include the marketing of his invention.

It has, therefore, been decided by the courts that the manufacturer of a patented article has the right, by nature of his monopoly, to establish and maintain arbitrary prices on his patent. Whoever violates the established prices is an infringer and liable to a damage suit for infringement.

At first thought it may seem that such a law is a violation of the seller's liberty, but such is not the case. A dealer is free to distribute the patented article in the prescribed manner or leave it entirely alone. By accepting the agency for a patented article, the dealer accepts all the conditions along with it. If he does not like the conditions, he is at liberty to decide that he will not act as a distributor of the article.

This is no hardship. It is a protection. The dealer knows that his profit is assured by law, and, if his competitor violates the prices which have been established, recourse for satisfaction may be taken to legal procedure. The manufacturer is in this way empowered to make the handling of his product advantageous to the dealer who wants to do a straight business with clean profit.

The retail dealer who takes advantage of a manufacturer's co-operation is wise. Your strongest ally in settling questions now confronting the trade is the man who makes the goods which you sell for a livelihood. Don't lose sight of this fact. By your reciprocation, encourage the manufacturers whose liberal selling policy means coin in your till.

NEW ADVERTISEMENTS.

H. G. Eadie, Montreal.
Collins Mfg. Co., Toronto.
Consolidated Plate Glass Co., Toronto.

MOVE PRICES UPWARD.

NOW is an opportune time for merchants to advance prices on practically all classes of goods in which metals figure as component parts. Stocks in hand cannot be replaced at their original cost on account of the marked advances made recently for nearly every metal listed. A glance over the market quotations of the past few weeks will convince any merchant of the truth of this statement, and should convince him of the advisability of readjusting prices being charged.

The fact that merchants are too prone to give away the advantages gained through purchasing goods at cut prices—lanterns, for instance—was recently commented upon. Is it not equally true that in order to gain a reputation for low prices some merchants continue to quote low prices on lines on which the conditions of the market warrant higher prices? If one merchant in town keeps prices down to what the goods cost him, rather than increasing them to the figures they can be replaced at, other merchants have to follow suit.

Get together. Talk matters over with your nearest competitors, and arrange prices in accordance with market conditions. And when an opportunity for wider co-operation presents itself in the form of a Provincial Retail Hardware Merchants' Association get in line with the movement of the times towards organization, and enlist as a member of the new body.

REFRIGERATION AN AID TO COMMERCE.

DISPATCHES from New York last week mentioned that the annual convention of the Refrigerating Engineers of America was in session there, a fact which will bring home to the minds of our readers the immense developments which this industry has undergone.

There are few hardwaremen in Canada who do not sell good quantities of refrigerators in the Summer season. If they are inclined to moralize they cannot fail to think of the manner in which they are helping along a principle which has been one of the most important factors in developing the commerce of the world. Those who live on the main lines of our great railways must have been struck with the sight of vast trains of refrigerator cars, carrying salt and even fresh meat from Chicago to all parts of the country, and fruit from one side of the continent to the other. Cold storage plants established here and there in our country are doing great things to eliminate waste, and the equipment of modern ocean liners makes it possible to give our Mother Country better goods, and our own people better prices.

DISCOUNT CHEQUES FOR CUSTOMERS.

TRADING stamps are not now permissible for use by Canadian merchants, the new law which went into effect on November 1 having forced their discontinuance. Many hardware merchants, however, desire to encourage cash buying, this being the chief argument in favor of the use of trading stamps or the giving of similar inducements to customers who pay cash for goods purchased.

The National Cash Register Co., of Toronto, Ont., and Dayton, Ohio, have devised a system which does away with the necessity of trading stamps, while accomplishing the same purpose. Their plan, also, is understood to be entirely in accordance with the provision of the new law, the idea, briefly, being to give each customer a check taken from the cash register which records the amount of the customer's purchase, and guarantees the customer a discount of 5 per cent. in cash, or to be applied on future purchases at the store. The checks are, of course, given only on cash purchases.

The system is in force in many districts, and is said to be giving entire satisfaction, doing away, as it does, with the necessity of holders of checks going to a trading stamp store in order to redeem the checks which have been saved up by the customers. Hardware merchants who desire additional information regarding the system should write the above mentioned company for printed matter, which they are now getting out, describing the plan in detail.

THE HOLIDAY TRADE.

ONLY one more week's shopping remains before Christmas, and the wise merchant is making the effort of his life to make this week the climax of a successful season. Open weather has affected Winter trade somewhat, but reports from various sections show that the volume of business done so far has been quite satisfactory.

To get his rightful share of Christmas trade the hardware merchant must have the goods, display them, advertise them, and, most important of all, sell them. Besides guns, sleds, skates, silverware, cutlery, etc., the various novelties of the season should be kept before the eyes of possible buyers.

The merchant who is going to sell many holiday goods has to feature them in his store windows. Placard the goods as Christmas novelties and use plenty of cards suggesting the idea of the season, and naming the price. Many people will buy an article when they know its price, who would never go into your store to inquire the cost.

Decorations and Winter scenes are always attractive. The passerby, the shopper, is in sympathy with the sentiment of the season, and anything that features that sentiment will gain his approval. Change the window display frequently, and always put in a card extending an invitation to visit the store—that the display inside is just as free and just as good as the one in the window.

Give the inside of the store a holiday appearance by investing a few dollars in Christmas decorating. Put up some holly, evergreens, etc. Display the Christmas articles, and mark the prices plainly. It is also a good idea to picture a Santa Claus in some way. It never fails to interest the children, and when the children are interested their parents are not indifferent. Many successful plans have been worked.

One merchant we heard of adopted the plan of placing a letter box in his store with a card that letters mailed there to Santa Claus would be delivered immediately. Many scores of letters were mailed, and the merchant forward-

ed each letter to the parents of the children. The idea was a novel one and was generally appreciated by the parents.

By using the local newspaper freely and making the store attractive the merchant should create a demand which will result in having the holiday goods in the hands of customers rather than carrying them in stock and tying up capital. A little enterprise now will prevent a lot of worrying when stock-taking takes place.

AN INSTRUCTIVE TOUR.

INTERVIEWED by a Hardware and Metal representative, Mr. Peleg Howland, head of the firm of Messrs. H. S. Howland, Sons & Co., Toronto, who returned a few days ago from a tour through Western Canada and the Western States, stated that the trip, extending over a couple of months, had been most instructive and beneficial to him. Although he had been as far west as Calgary previously, this was the first occasion on which he had visited the Pacific Coast. Speaking of the scenery, Mr. Howland said that in his opinion the views along the C.P.R. through the mountain passes in British Columbia far excelled the famed Shasta route in California, and the mountain scenery between Salt Lake City and Denver.

Mr. Howland stated that everywhere between Lake Superior and the Rocky Mountains there was evidence of a large increase in population, every town and city showing a marked growth and appearing to be very prosperous. The merchants, generally, speak hopefully of future prospects, and while there is general satisfaction with this year's trade many complained of collections being slow in their districts.

"Is not the cash system being introduced more generally in the west?" asked Hardware and Metal. "Yes," said Mr. Howland, "it is in the older settlements, but there is still far too much credit given by merchants, especially in the smaller places. Both wholesalers and retailers are endeavoring to develop the cash system and minimize the credit evil, and the recent organization of hardware merchants into an association should help them considerably in this direction."

"How do the western stores compare with those of the east?" was asked. "Very favorably," replied Mr. Howland. "In many of the large towns, and in some of the smaller places, I saw stores which in their interior arrangement excelled the average hardware store in the east. There appears to be more elbow room in the west, and the merchants take advantage of this by having large stores. Their stocks, too, are very complete and well arranged, and many side lines are carried. In several stores I saw cut glass and the cheaper grade of watches displayed for sale."

"How about the Pacific Coast Cities?" "I cannot make any comparison as regards them," replied Mr. Howland, "as this was my first visit to the coast. Vancouver appeared to be experiencing a boom, and a conservative man from the east would gather the impression that the city is growing too fast. It is, however, the best business city, and its rapid growth may be warranted by this fact. Victoria is growing more slowly and is very popular as a headquarters for tourists. The feeling in Nanaimo is very hopeful, but as the city is just recovering from the recent disastrous coal strike business will be affected there for some months. New Westminster is also growing steadily."

RETURNED
DEC 18 1905
to Montreal
our Book 144
Page 37

Mr. George Caverhill,
Of Caverhill, Learmont & Co., Retiring President of Metal and Hardware Branch of the Montreal Board of Trade.

NEW OFFICERS ELECTED.

At the annual meeting of the metal and hardware branch of the Montreal Board of Trade, held last week, the following officers were elected for the ensuing year:

President—Geo. O. Kohl; vice-president, A. A. Brown; directors, Fred Bacon, H. J. Fuller, C. H. Godfrey, and W. S. Leslie.

The new president of the branch, Mr. Kohl, will be their candidate for the council of the board of trade.

Don't forget the accessories— the stove boards, shovels, dampers, flue stops, collars, polishers, etc. There is always a chance for them.

THE CONSPIRACY TRIALS.

A FULL account of the closing scenes in the first conspiracy trial is reproduced in the pages devoted to the plumbing and steamfitting trades. The addresses by judge and counsel will be interesting reading to hardware merchants throughout Canada as well as those concerned directly in the trade under fire.

The members of the two organizations, supply men and master plumbers, are still being held up as highway robbers in the daily newspapers. An article in the News of December 12 is remarkable chiefly for the ignorance of the writer and his supreme confidence in the gullibility of the public. According to the article the 166 master plumbers in Toronto filched from their customers each year the sum of $830,000 per year. The writer figures in 25 per cent. profit on a supposed total of business done, the whole mass of figures being evidently the work of a junior reporter. The Star of December 13 editorially expresses surprise that the plumbers can continue doing business after the exposures they have been subjected to. There should be no surprise on this point. The great body of master plumbers have not as much need to be ashamed of their actions as the editors who have published such untruthful yarns to satisfy their readers' love for sensationalism — and make profit. Hardware and Metal has no defence to offer for the larger plumbing houses whose greed led them to make the illegal "I.O.U." system so common and who drew many of the smaller houses into the net. We submit, however, that business men have a right to agree amongst themselves in order to secure a living profit and that if such an agreement was overstepped the lawyers concerned must bear their share of the blame. If the plumbers had not desired to keep within the law the attorneys would not have been consulted.

With other trials to come on next week it is too early to forecast what the result will be. But those who are predicting that the associations will disband are doomed to disappointment, as while their influence will likely be weakened as a result of the litigation, there are sufficient members who know the benefits of organization not to allow the associations to dissolve when slight changes in their by-laws will make them within the strictest interpretation of the law. Those members who have been bearing the brunt of the newspaper publicity, have been in constant attendance at court, and have in addition had to pay heavy fines, deserve much from their fellow members. As a rule the men who profited most from the actions declared illegal have kept in the background, allowing others to bear the disrepute.

PROMINENT RETAILER SPEAKS.

A WELCOME visitor to the Montreal office of Hardware and Metal last week was Mr. James Purvis, of the well-known firm of Purvis Bros., Sudbury, Ont. Mr. Purvis spent nearly the whole week in Montreal calling on a number of his business connections.

Speaking about his letter to Hardware and Metal, which was recently published in these pages, Mr. Purvis declared he did not understand the silence of hardwaremen throughout the country regarding cartage and "advance" charges on shipments from Montreal and Toronto. He did not believe himself to be the only sufferer by a long way, and he was particularly anxious to have the matter thoroughly threshed out in this, the representative paper of the hardware trade.

Mr. Purvis is thoroughly in accord with the idea of organizing a retail hardware association to cope with such difficulties as those before mentioned. His wide grasp of current affairs, and his prominent position in the trade, will make him a most valuable man in such an association, when it is definitely organized.

An interesting point in connection with our paper, which was raised by Mr. Purvis, was the value he placed in the current market quotations published every week, and revised from time to time as often as changes are made in the prices of the various hardware lines. He has often made use of this list to great advantage, when his own price list has been lost or misplaced.

We would be more than pleased to welcome in our Toronto, Montreal or Winnipeg offices any retailers who may be in those cities on business. Our headquarters are most central, and, as we are anxious to keep closely in touch with the retail trade, we are never too busy to exchange ideas with such visitors.

DOMINION C. T.'S ANNUAL BANQUET.

The annual banquet of the Dominion Commercial Travelers' Association will be held in the Windsor Hotel, Montreal, on Thursday, December 21. The committee report that from all indications this banquet will be the best in the history of the association. The lists of invited guests and speakers are in the first rank of commercial, legal, literary and Parliamentary life, and a good treat is in store for the guests.

Remember the annual inventory on the first of the year. Aim to have stock well up when that date comes.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 10.

MANY are the qualities which go toward making up a successful commercial traveler. First and foremost is a knowledge of his goods, as, in these days of scientific salesmanship, a traveler who has to speak in generalities stands a poor chance of landing a good trade. And, next in importance, comes the question of personality. The man who succeeds on the road is the one with an even disposition, who can display an unfailing enthusiasm and show as good a front under a succession of "throw-downs" as when he is selling car lots. In other words, he must be a man capable of turning failure into success.

J. C. Watson,
Representing Lewis Bros., Montreal, in Nova Scotia and Prince Edward Island.

The genial disposition of Mr. J. C. Watson, a cut of whom is presented here, peculiarly fits him for the performance of his duties, and to his strong personality he owes the fact that he is one of the most valued of Lewis Bros.' numerous traveling staff.

Mr. Watson has a wide acquaintance with hardware lines, and all his time on the road has been spent in calling upon this trade. For five years he represented the Whitman & Barnes Mfg. Co., tool makers, of St. Catharines, Ont., and his work was so successful as to bring him to the notice of Lewis Bros., Limited, the enterprising wholesale hardware dealers of Montreal. Mr. Watson accepted a position with this firm, and for six years he has been making a record for himself in Nova Scotia and Prince Edward Island.

Being in his very prime, Mr. Watson has many years of further successful service ahead of him, and his friends are confident of his ability to hold the fine trade he has won.

HOLIDAY REMINDERS.

KEEP the window full of seasonable articles. This is the time of the year when people are looking for suggestions, and a glance into your window may bring in a good customer.

Hang out a "Skates Sharpened" sign.

Push nut crackers and nut picks.

Most markets are advancing. Get a profit.

Carving sets and pocket knives are popular presents.

The majority of people, men in particular, start out to buy holiday presents without an idea of what they are going to purchase. They want to look around and see, and therefore it behooves the merchant to have goods well displayed, and have the price attached, so that all may see at a glance. The person who wants to spend $5, and sees something that just comes within the limit, is apt to buy, while perhaps embarrassment would result from a continual pricing of goods.

Don't allow your clerks to importune people to buy. Make everyone feel who enters your store that your display of goods is one you like to have looked over and inspected whether they buy or not. Many like to go in and look around. Make all feel at home and let them look to their heart's content, until they ask to be shown goods. Then is the time for the salesman's fine art to be put to work.

Frothingham & Workman, Limited, Montreal, are issuing a unique series of advance cards to be used by their travellers. Each card illustrates some hardware line carried by this enterprising firm, while printed on the same side as the address is a notice of the traveller's next call. The reverse side of the card is a blotter, which insures the card being preserved and used instead of being consigned to the waste basket.

CORRECTION.

A mistake has been made in A. L. Silberstein's advertisement. We have quoted hollow ground razors at $2.50 and double concave $3.00. These figures should be $2.00 and $2.50.

PERSONAL MENTION

Ontario.

Mr. A. V. Cline, plumber, Grimsby, was a visitor in Toronto on Wednesday.

Mr. James Hardy, of Jenkins & Hardy, has been in Montreal during the past week.

Fire did about $150 worth of damage to the Petrie Mfg. Co.'s plant at Hamilton last Monday.

The Nickel Copper Co. has taken over the business of the Hoepfner Refining Co., agreements confirming the amalgamation having been completed during the past week.

Mr. Harry C. Martin, British Columbia representative of H. S. Howland, Sons & Co., is in Toronto on a trip which will keep him in the east until after the holidays.

Mr. W. S. Andrews, controller of the Canadian General Electric Co., Toronto, intends to sever his connection with that company and engage in business for himself as a public chartered accountant.

The Anthony Fence Co., of Tecumseh, Mich., are opening a branch in Windsor for the manufacture of wire fencing. Machinery is now being put in and they expect to be running in a few weeks' time.

Mr. H. R. Chillas, of H. S. Howland, Sons & Co., Toronto, has recovered from an attack of appendicitis. He has been absent from business for about a month and this week left for Montreal, where he will pay a short visit to his old home.

Mr. H. Clucas, manager of the Toronto branch of the Canada Paint Co., has been in Montreal this week attending the annual convention of the company's travelers. Others present from the Toronto branch were Ed. G. Fadden, W. H. Allan and W. G. Good.

Country merchants are very busy with their Christmas trade and plumbers are using every available day so long as open weather lasts in order to complete jobs in hand. Consequently the number of visitors at the various wholesalers' has been limited during the week.

The James Robertson Co. have closed up the Rat Portage branch of their Winnipeg house and Mr. George F. Clare, who has been manager at Rat Portage, has returned to Toronto. Mr. Clare brought with him as souvenirs of his residence in New Ontario some fine specimens of deer and moose heads, which now adorn the show rooms of the James Robertson Co. He also has some interesting stories to tell regarding the adventures he had in procuring the souvenirs of the hunt.

The Canada Cycle & Motor Co. have disposed of the retail branch of their automobile business to the Dominion Automobile Co., managed by Mr. M. A. Kennedy. The new company have secured a number of American and foreign agencies and in addition to operating the garage at Bay and Temperance streets, Toronto, they intend to establish warehouses at Ottawa, Montreal, Quebec, Winnipeg and other points. The Canada Cycle & Motor Co. will continue the sale of their bicycles and skates at their retail branches as heretofore.

Mr. G. A. Binns, hardware merchant, Newmarket, was a visitor at the Toronto office of Hardware and Metal on Thursday. Mr. Binns is one of the oldest subscribers to Hardware and Metal, having taken the paper since its first copy. Mr. Binns reports business in his district to be very satisfactory. The extension of the electric railway to Jackson's Point on Lake Simcoe is resulting in increased business for the straight line merchants in the larger towns, the general merchants in the smaller villages losing some trade because of the ease with which the farmer can reach the large centres. Of course some people in the large towns visit the cities for supplies, but this does not affect the hardware trade so much as other branches of business.

RETURNED
DEC 18 1905

T. L. Waldon,
Manager of Caverhill, Learmont & Co's. Winnipeg Office.

Western Canada.

The Great West Saddlery Co., Edmonton, have decided to enlarge their present quarters. An addition 25 by 75 solid brick is at present under construction.

Peter Lund, of the coal mining firm of Breckenbridge & Lund, is visiting the east. Mr. Lund reports everything as flourishing at the mine at Lundbreck, Alta. The new machinery is being installed rapidly.

A very pleasant affair took place at Ross Bros.' hardware establishment at Edmonton recently. Mr. Hugh McJannett, foreman of the tin shop and furnace department, was waited upon by his employers and fellow employes and presented with an address, and a handsome secretaire and chair to match, together with a large number of individual presents from employes of the firm. The occasion was the marriage of Mr. McJannett, the bride being Miss Margaret Livingstone.

Quebec.

F. R. Dalton, of Waterloo, Que., was in Montreal this week.

A. Archambault, plumber, of Hull, visited Montreal a few days ago.

Madame B. Lahaise, of St. Hilaire, spent a day in Montreal this week purchasing supplies.

Ferdinand Dorion, roofer and tinsmith, of St. Andrew's East, visited Montreal during the week.

Fred Sermon, of the Miller-Morse Company, wholesale hardware merchants, Winnipeg, was in Montreal this week.

Visitors to Montreal from the other parts of the province are few and far between this week. Dealers seem to be "sawing wood."

Mr. Raymond, of Raymond & Frere, wholesale hardware and grocery merchants, St. Hyacinthe, was in Montreal one day last week.

Geo. R. McClure, general manager of The Canada Smelting Company, Limited, Montreal, was in Ottawa this week, calling on the trade.

Chas. Leblanc, hardware merchant, of Joliette, was in Montreal recently and called on some of the wholesale firms with whom he has business connections.

N. A. Meyer, of the Meyer-Thomas Company, manufacturers of cigar and tobacco boxes, Granby, was in Montreal Wednesday buying hardware supplies.

Friends of J. H. Bell, hardware merchant, Mattawa, Ont., will regret to learn that he is confined to a hospital in Montreal, though his progress toward recovery is satisfactory.

The Sayer Electric Company, Montreal, are attracting the attention of passers-by on Beaver Hall Hill by their fine display of electric toys. The window is kept clear of frost by electric fans.

Mr. James Purvis, of the firm Purvis Bros., Sudbury, North Bay and Webbwood, Ont., who spent last week in Montreal, left on Saturday for Quebec, where he spent the week end, returning to North Bay on Monday morning of this week.

NORTHWEST TRAVELERS CONVENE.

The boys who sell the lines of Caverhill, Learmont & Co. in the great Canadian west, are at present enjoying themselves in Montreal, whither they were called to attend the annual conference of the Northwest traveling staff, held last week.

Thoroughly characteristic of western business men are these knights of the grip, and all of them are full of enthusiasm in speaking of the Empire's granary.

Owing to continued extensive building operations in the west, the hardware trade there is in a most flourishing condition, so that the boys are feeling particularly exuberant. Under the fatherly care of "Tom" Waldon, however, they are keeping out of the clutches of the law.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Sash Cord is now selling at 31c. per lb.

Shot has advanced to 5 discount off list.

Lead Pipe is now quoted at 20 discount off list.

Turpentine has declined to 93c. and 92c.

Machinery Iron Finish Steel is now $2.27½c.

Queen's Head Galvanized Sheets have advanced.

Summerlee and **Londonderry Pig Irons** have gone up in value.

Old Material—Several changes are noted.

Pig Lead has jumped up to $4.65 and $4.70.

Ingot Tin is up again, and we quote 39c. to 40c.

Hay Wire has advanced.

Brass and **Copper Wire** are quoted at 52½% off list.

Copper Rivets and **Burrs** have been advanced.

TORONTO.

Lead Pipe now quoted at 20% discount.

Iron Pipe—Further advances have been made.

Turpentine—Prices have fallen slightly.

Linseed Oil has advanced to 49c. and 52c.

Wire Nails—A 10c. advance has been made.

Shot—Another change makes the discount 5%.

Galvanized Tinware—Discount has been lowered.

Copper Goods—All Copper goods have advanced.

Elbows—Discount is now 40 .

Pig Iron—Londonderry has advanced again.

Ingot Tin—Price is now 40c.

Lead—Both Pig and Bar have advanced.

Copper—Ingot and Sheet have advanced 1c. per lb.

Old Material—Copper, Brass and Iron have advanced.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, December 15, 1905.

THE past week has been interesting because of the numerous advances in price which are noted at the head of this column. All have been occasioned by the most remarkable situation the metal market has known for years. As there is, as yet, no appearance of a weakening in metals, it is altogether likely that hardware prices will reach still higher figures before a check is put upon the present tendency.

Business is remarkably good for December, though, naturally, it has fallen off in the past few weeks. Orders are still coming in sufficiently to keep the staffs of local jobbing houses busy shipping them out, instead of taking stock, as is usual at this time of the year.

Axes—A good volume of business is being done in this line. Our prices are as follows: Chopping axes, unhandled, $6.00 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—We quote: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Hay Wire—A big jump has been made within the past few days, and dealers who were holding off in anticipation of easier conditions, have been badly nipped. We quote: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b., Montreal.

Sewing Machines—Prices remain unchanged, and the turnover is very satisfactory. We are quoting as follows: Hand-sewing machines, $11 each, net; complete machines, with stand, $18.00 and up, according to quality.

Lanterns—We are still authorized to quote prices as follows: Cold blast, $4.50; No. 0 Safety, $5.00.

Rivets and Burrs—This is one of the lines which have been advanced during the week. The strength in the copper market has been responsible for amended prices in copper rivets and burrs. Our quotations are as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 40 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—Orders coming in are of satisfactory size and number. We give prices: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—While not in such great demand as a few weeks ago, there is still a good turnover at these prices: 3-8 and smaller, 60 to 10; 7-16 and larger 55 and 5.

Horse Nails—There is nothing new to remark in connection with this trade, which still commands following prices: C brand, 40, 10 and 7 1-2 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent

Wire Nails—Another of the advances made during the past week was in wire nails, which are now being sold at $2.15 per keg, f.o.b., Montreal.

Cut Nails—Trade is very quiet with but few inquiries for good-sized lots. Price remains at $2.20 per keg, f.o.b., Montreal.

Horseshoes—Fair quantities are being shipped. We are quoting the following prices: P.B. New Pattern, base price, $3.50 per 100 lbs., M.R.M Co. latest improved pattern iron shoes, light and medium pattern No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $4, No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60 Toeweight, all sizes, No. 1 to 4, $6.85 Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes, 25c.

Sporting Goods—We are quoting as follows: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.. American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred pounds; chilled, $7.00 per hundred pounds; buck and steel, $7.50 per hundred pounds; ball, $8.00 per hundred pounds. We quote discounts 10 per cent. on shot, f.o.b., Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—Conditions are practically the same as at our last reports. The weather is unfavorable to building operations, a fact which acts against this branch of the trade. Prices are unchanged.

Cement and Firebrick—Firebrick is selling well, but with the exception of occasional small jobbing orders, there is very little doing in the cement trade. Our quotations are as follows: $1.80 to $1.90; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2.00 to $2.10 ex-cars; Canadian Portland, $2.00 to $2.05. Firebrick, English and Scotch, $17.00 to $21.00: American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags, $2.05 in barrels in round lots.

Coil Chain—Our prices are as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3.00; 1 inch, $2.95.

Skates—Medium priced lines in small sizes are very scarce. Demand is quite active. We quote from 25c. to $2.50, according to quality.

Sleigh Bells—We quote: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape, $1.15 to $2.00; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2.00; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—Our prices are: Jute, unlined, $4.50; 3-4 lined, $9.50; full lined, $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snowshoes — The supply is exhaust-

ed, with inquiries still coming in from all over the country. The leading jobbing interest here reports that there is only one grade now, which can be quoted on. Prices are from $15 to $35 per dozen pairs, according to quality.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, December 15, 1905.

ADVANCES in prices of many lines have been made during the past week and wise merchants throughout the country will move their retail quotations upward in order to keep pace with the many advances which have been made recently in not only raw materials, but in the finished products. Amongst the advances made this week are the following:

Wire nails have been advanced 10c. and are now firm at $2.25 base, with a 10c. rebate.

Galvanized ironware, including galvanized buckets, have been advanced from 50 per cent. to 45 per cent. discount.

Copper and copper nickeled plated goods have been moved upward from 50 per cent. to 45 per cent. discount. Copper pitts from 40 per cent. to 35 per cent. and tea kettles and boilers with copper bottoms from 40 per cent. to 35 per cent. discount.

Copper rivets, formerly 45 per cent. are now quoted at 40 per cent. discount, and copper burrs, formerly 45 per cent. and 10 per cent., are 30 per cent.

Elbows, formerly 45 per cent., are now 40 per cent.

Shot which was advanced from 15 per cent. to 10 per cent on Nov. 14th, has been advanced again and is now quoted at 5 per cent.

Business generally is reported to be exceptionally brisk and no let-up is expecte duntil after the holiday. While most hardwaremen have stocked up all the goods they are likely to require for the Christmas trade, there are some sorting orders being received by jobbers, and general merchants are also supplying considerable business. Cutlery and sporting goods continue in fair demand, as also does building supplies. Lumbering goods, such as saws, axes, etc., are in strong demand and shipments quite heavy. The coming of snow has also created a demand for sorting orders of horse blankets, sleigh bells; skates and snowshoes are having a run for the same reason. The shortage in these goods has been overcome and shipments are being made promptly.

Axes and Handles—Heavy shipments are being made to late buyers.

Cutlery and Silverware—The heavy holiday demand is causing a large movement of goods.

Sporting Goods—Shotguns and ammunition are having a fair sale.

Washing Machines— A seasonable trade is being done.

Chain—A satisfactory trade is reported. We quote: 1- inch, $6.50; 5-6 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Quotations continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire—Quotations continue unchanged and business fair. We still quote: $2.42 1-2 f.o.b. Cleveland.

Barb and Coil Spring Wire—A seasonable trade is being transacted.

Wire Nails—A 10c. advance has been made and the ruling price is now $2.25 with the usual 10c. rebate.

Cut Nails — A satisfactory volume of business is reported. Quotations are: $2.40 per keg f.o.b. Toronto.

Horse Nails—Orders are satisfactory and shipments large.

Horseshoes— Trade continues brisk; prices firm. We quote: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7.00. If shipped from factory 15c. less.

Horse Blankets—Business in halters, girths, horse blankets and similar goods is active.

Skates and Sleigh Bells—The coming of snow and ice has created many sorting orders and shipments are large.

Screws—Advancing prices in metals make the market very firm, but prices are unchanged.

Rivets and Burrs—Copper rivets and burrs have advanced, but iron goods are unchanged.

Bolts and Nuts— Demand is active and prices very stiff.

Cordage—Sorting orders are plentiful. We still quote: Manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 9c.

Cement—Prices are unchanged and trade is seasonable. Our prices are: For carload orders f.o.b. Toronto, Canadian Portland, $1.90 to $2.00; American Portland, $1.90 to $2.00. For small orders ex warehouse, Canadian Portland, $2.10, American Portland, $2.10.

Firebrick—Prices continue as before: English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c.; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—Prices continue unchanged and a fair trade is being done.

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, December 15, 1905.

IN spite of the near approach of the holiday season, local metal merchants say that they notice very little, if any, falling off in the quantity of orders received in the daily mail. This condition is no less surprising than it is satisfactory.

Another week of great strength in the metal markets is that which has just passed and several prices have been advanced, with prospects of further advances in other lines, even before this appears in print.

The chief change in price has been in tin and lead, the latter of which has made a phenomenal advance of 25 cents per hundred pounds. Ingot tin, too, is very much stronger and has advanced 2c. a pound over last week's prices, being extremely well held at our new figures.

After several weeks of an inactive market antimony has gained strength within the past few days and our figures which last week would have been shaded for quantities, now hold good for any quantity with prospects that the advance in the Old Country of from £1 to 2 will soon be followed in this country as well.

To sum up the week's business we may say local merchants have been astonished at the result considering the time of year. In fact, a tendency has been noticed of recent years to a diminished slack season in December and January. But things are particularly good this Winter, as may be seen from the gradually advancing prices in all lines of metals.

Canada Plates—The advance quoted last week is being rigidly maintained on the market here. We are now quoting as follows: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75; galvanized, 52's, $4.10; 60's, $4.35.

Copper—Although we quote the same prices as last week, the market is admittedly much stronger and we are expecting another jump before we go to press. For the present we quote as follows: Ingot copper, 19 3-4c. to 20c. Sheet copper, base sizes, 25c.

Ingot Tin—As forecasted last week, there has been another advance in this metal and prices now are higher than they have been for 20 years. As the visible supply is constantly going behind the consumption it must not be expected that conditions will materially differ for a long time to come, except as a result of market manipulation and the situation now is by no means favorable for the operation of "bears." Prices now are 39c. to 40c. per pound.

Pig Lead—Another advance of 25c. per 100 lbs. is creating havoc in all kinds of lead products, which have been advanced in wholesale fashion to keep pace. We are now quoting from $4.65 to $4.70 per 100 lbs.

Boiler Tubes—There is no new feature to notice this week and we

still quote prices as follows: British and American tubes, 1 1-2 inch. 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—A couple of advances have been made this week, but conditions generally remain about as before. We quote:

"Dom.," No. 1.$19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal.
" No. 2	19.00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	23.00	"	"
" (special)	22.00	"	"
Summerlee No. 1	23.50	"	"
Clarence No. 1	20.00	"	"
" No. 3	19.50	"	"

Tool Steel— We quote: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Haradening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed Steel, 60c.

Merchant Steel—The strength of the metal market is here reflected by another rise in the price of machinery iron finish, which is quoted now at $2.27 1-2. We give the following prices: Sleigh shoe, $2.17 1-2; tire, $2.27 1-2; spring, $2.75; toecalk, $2.82 1-2: machinery iron finish, $2.27 1-2; ruled machinery steel, $2.75; mild, $2.17 1-2 and upwards; square harrow tooth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

Cold Rolled Shafting—We quote: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch. $3.50 per 100 lbs.

Galvanized Iron—If spelter continues to advance, as it shows every indication of doing, the mills will have to materially increase their prices. For the present we are quoting: Queen's Head, 28 gauge, $4.25; 26 gauge, $4.00; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge. $3.40; Fleur-de-Lis, 28 gauge, $4.00; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.25; Comet, 28 gauge, $3.85; 26 gauge, $3.60; 22 and 24 gauge. $3.35; 16 to 20 gauge, $3.10; Bell brand, 28 gauge, $4.20 to $4.25; Gorbal's "Best Best," 28 gauge, $4.10, "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots 25c. extra.

Black Sheets—We are still quoting. 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

Antimony—Owing to a sharp advance in the Old Country our prices are very firm and will scarcely be shaded for any quantity. We quote: 14c. to 14 1-2c. for Cookson's.

Tin Plates—Last week's advance is well held and we are still quoting as follows: Cokes, base size, 1C, 14 x 20, $4.00; charcoal, base size, IC, 14 x 20, $4.25.

Terne Plates—Last week's price of $6.85 is still ruling the market.

Ingot Zinc—Prices are unchanged with the tone slightly higher and we are quoting from 7c. to 7 1-4c.

Sheet Zinc—Prices still are, in casks, 8c., less than casks, 8 1-4c.

Sheet Lead—We are quoting: 2 1-2 lbs., 5 1-2c. by the roll; 3 lbs. and heavier, 5 1-4c. by the roll; large quantities, 25c. per hundred pounds.

Bar Iron—Conditions remain the same as at our last report and the current price is still $1.97 12c., f.o.b., Montreal.

Old Material—The market in metals seems to be pretty well cleaned up and good prices are in order. Cast scrap iron is in particularly good demand, although stocks are light. Otherwise conditions are unchanged. Our quotations are as follows: Copper wire, 14 3-4c.; light copper, 13 3-4c.; heavy red brass, 12 1-2c.; yellow brass, 9 3-4c.; light brass, 7c.; lead, 3c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $11; mixed rags, 75c. to 90c. per 100 lbs.; old rubbers, 7 1-4c. to 7 1-2c.

ONTARIO.

Office of HARDWARE AND METAL
10 Front street east,
Toronto, December 15, 1905.

STILL more advances have been made in the prices of metals quoted and there seems to be no limit to the height to which quotations are to go before a reaction sets in. A scarcity of metals for spot delivery exists and this no doubt has its effects on the local market. Outside markets, however, are very firm and the situation locally is merely a reflex of conditions on the larger market.

During the week Londonderry pig iron has advanced to $22.00 and ingot tin has moved upwards from 38c. to 40c. Lead has made another jump and both pig and bar are now being quoted from 10c. to 20c. higher than a week ago. Copper also has advanced another cent on both ingot and sheet. These advances in new stock are having their effect on old material, and quotations on most lines of scrap have been advanced during the week.

Pig Iron—Londonderry has been advanced another half dollar and prices of other lines are very stiff. We quote:

Middlesboro, f.o.b., Toronto	$22 50
Hamilton, No. 1, at furnace	20 00
" No. 2, "	19 50
Midland, No. 1, "	20 00
" No. 2, "	19 50
Radnor, at furnace	31 50
Londonderry, f.o.b. Toronto	22 00

Bar Iron—Business is very satisfactory with prices very firm. We still quote: $2.00 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

Ingot Tin—A 2c. advance has been made, the market being very active and goods scarce. We are now quoting 40c.

Tin Plates—Demand continues strong and prices stiff.

Galvanized Sheets—Prices are firm in the outside markets, the demand continuing active locally.

Brass— Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—Another advance in both pig and bar has been made, owing to the higher cost of stock. We now quote: Pig lead, $4.60 per 100 lbs., and bar lead, $5.00 per 100 lbs.

Zinc Spelter—The market continues active with prices unchanged. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—Ingot and sheet copper have been advanced again and stocks are reported to be very scarce. We quote: as follows: Ingot copper, $20 per 100 lbs., and sheet copper, $24 per 100 lbs.

Antimony—A more active demand exists and prices are much firmer.

Old Material—High prices for new metals has resulted in sharp advances in old material. Dealers' buying prices are as follows: Heavy copper and wire, 14c. per lb.; light copper, 13c. per lb.; heavy red brass, 12 1-2c. per lb.; heavy yellow brass, 10c. per lb.; light brass, 8 1-2c. per lb.; tea lead, $3.00 per 100 lbs.; heavy lead, $3.25 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $10.50, No. 2 wrought $3 to $5; machinery cast scrap, $15; stove plate, $10; malleable and steel, $5; old rubbers, 7c. to 7 1-4c. per lb.; country mixed rags, 75c. per 100 lbs.

Coal—A scarcity of stock exists in many sections and prices are firmer in consequence. We quote: Anthracite in cars at bridges, grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N.P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, December 14, 1905.

THE Lake Superior ore market has furnished in the past week one of the most remarkable developments of this record-breaking year. At the end of the first week in December, with cargoes of 1905 ore still coming down the lakes, it was authoritatively estimated that nearly 90 per cent. of the merchant ores to be mined for 1906 had been sold. Careful computation also shows that counting in the ore of consumers having their own mines and of consumers receiving ore on long time contracts there has now been placed 96 per cent. of all the lake ore available for next year. An output of 36,000,000 to 37,000,000 tons is now figured on for 1906, and of this only about 1,000,000 tons is for sale.

Complete returns from the shipping ports show that the water shipments

this year aggregated 33,473,761 tons. Adding all-rail shipments this indicates total shipments for the current year of 34,100,000 gross tons, a record output, which compares with the maximum of 27,571,121 gross tons in 1902 and an average of 23,500,000 tons for the past four years.

Pig iron production is now on the basis of over 25,000,000 tons per annum. Our statistics for the month of November show that for that short month the production of anthracite and coke iron amounted to 2,014,021 gross tons, against 2,053,174 tons in October, a month of 31 days. Adding as a conservative estimate a monthly production of 30,000 tons of charcoal iron, the annual rate given above is reached. In November the steel companies contributed 1,334,644 tons to this total.

So far as can be learned there is no truth in the cabled reports from England of purchases there for American account of 25,000 tons of Bessemer pig for consumption here. The only steel maker in this country likely to handle such a quantity denies such a transaction, which, too, is unlikely, because the prices abroad are above the parity here. The report is regarded as a bull canard.

The steel situation is growing serious with increasing scarcity. Our Chicago correspondent reports that one large interest in that district estimates a shortage of 15,000 tons per month. The leading interest in the central west is unable to operate as much finishing capacity as desired because the supply of sheet and tin plate bars is inadequate. In the east mills which until now were running on $23 and $24 steel must face the question of buying new supplies at close to $30.

In the rail trade the only large transaction in the domestic market is a lot of 15,000 tons for Morgan's Louisiana & Texas Railroad. For the international markets and as possibly affecting our own mills there are two interesting orders at hand from Canada which aggregate about 85,000 tons. It is pretty certain that the Canadian mills will not be able to take any part of this business because they cannot meet the deliveries.

All reports agree that the volume of business coming to the wire mills is exceptionally heavy. Instead of beginning to stock up for the Spring trade, the mills are still forced to ship from stock. The tin plate and sheet mills, too, are very busy.

LONDON METAL MARKETS.

From Metal Market Report, December 13, 1905.

Pig Iron — Cleveland warrants are quoted at 53s. 3d, and Glasgow Standard warrants at 52s. 2d, making prices as compared with last week 3d higher for Cleveland warrants and 2d higher for Standard warrants.

Tin—Spot tin opened strong at £163 17s. 6d, futures at £162 5s, and after sales of 360 tons of spot and 240 tons of futures closed strong at $164 2s. 6d for spot and £162 15s. for futures, making price as compared with last week £3 7s. 6d higher on spot and £4 18s. higher on futures.

Copper—Spot copper opened strong at £80 5s., futures £79 12s. 6d, and after sales of 300 tons of spot and 900 tons of futures closed steady at £80 5s. for spot and £79 5s. for futures, making price as compared with last week £2 7s. 6d higher on spot and £2 2s. 6d higher on futures.

Lead—The market closed at £17 6s. 3d making price as compared with last week 6s. 3d higher.

Spelter—The market closed at £28 15s. making price as compared with last week 2s. 6d higher.

New Brunswick Trade News

St. John, N.B., Dec. 11, 1905.

ONE or two local stove men seem to be of the opinion that the stove trade this season is not up to that of other years. That, however, is not the opinion of Mr. J. E. Quinn of Messrs. Quinn & Co., the north end plumbers, stove dealers, etc. Speaking to the correspondent of Hardware and Metal to-day, Mr. Quinn expressed himself as well satisfied with the business his firm has done this season as regards stoves. As Mr. Quinn puts it, "if the stove business is 'off' with some of the dealers, it's decidedly 'on' with us." Stoves of all kinds have been in good demand among Mr. Quinn's customers and the staff of employes have been kept busy setting them up. In common with other plumbers, Messrs. Quinn & Co. are now making ready for the season of frozen pipes and disorganized water service.

Of late the price of graniteware has dropped somewhat here and the tendency seems to be toward further decrease The cause of the lowering of the prices of this ware is said to be the competition of a United States firm. This firm is putting goods on the market at such prices that a lowering of the figures asked for graniteware by dealers handling the product of other companies is a necessity. In some cases the decrease has been in the vicinity of ten per cent.

Mh. G. J. Capewell, of the Capewell company, which recently acquired the controlling interest in the Maritime Nail Works, is at present in the city. Mr. Capewell, though courteous to all who seek information from him for publication, is very uncommunicative. His visit, he says, is to enable him to attend a meeting of the new board of directors of the works, and he declines to give any information regarding the talked of changes in their management.

Engineers employed by the New Brunswick Co. at Lepreaux report the finding of magnetic iron ore of a high quality. They estimate that the company's property contains at least 18,000,000 tons of the ore. If all goes as hoped and expected by the directors, shafts will be sunk and a complete equipment for mining the ore will be installed. Blast furnaces and rolling mills may be erected.

The metal market continues to be characterized by a tone of firmness. Apparently the upward tendency previously referred to in this column is still to be in evidence. Galvanized iron has risen in price since the last letter. Dealers who have occasion to buy metals are naturally not particularly pleased at the turn things have taken.

British Columbia Trade News

Dec. 12, 1905.

CONSIDERATION of the freight rates issue is over-shadowing the immediate business of the day in the minds of all wholesale shippers in this province, and the hardware men are especially interested. There has been a great deal of discussion over the vexed question, from the time it was first taken up before the Railway Commission and the C.P.R. asked to file its answer to the demands of the coast shippers. The fact that the C.P.R. had been asked to do so has been taken advantage of by that company to temporize with the merchants of Vancouver, to the extent that the date which was set by the merchants for the C.P.R. to give them some assurance in the matter was allowed to pass with nothing more satisfactory than the evasion of a decision on the ground of propriety. In other words the railway company said it would not be the correct thing—"not good form," in short—to make a deal with the merchants direct while the matter was under advisement by the Railway Commission. As the same line of etiquette and procedure has not been observed by the railway company in connection with this very question, or rather the other side of it, the rates to Edmonton having been lowered, the Vancouver merchants failed to see the consistency of the railway company's position. It was, therefore, decided when Assistant General Freight Agent Greer could give no other answer, that the merchants would institute a boycott on the railway. This is now in force and being vigorously prosecuted. The merchants have sent a delegation to Seattle to confer with the Great Northern as to routing cars through from the east, and an effort is also being made to induce the retail trade which buys in the east and brings out distributing cars, to join the movement by routing their cars over the opposing lines.

The Vancouver Board of Trade is in sympathy with the movement, and one of the leaders of the fight, Mr. R. P. McLennan, a leading hardwareman, is president of the board. Through various means the merchants will appeal to the sympathy of the business public in the east, in their demands. Some members of the board think that the unfairness of the treatment being given Vancouver and Victoria in this matter is not understood even by the directors of the railway company.

Crawford Bay, on Kootenay Lake, the site of a former smelter proposition, is to be the scene of activity in the first development of the iron industry in the interior of B.C. A syndicate of Cleveland, Ohio, capitalists, headed by Matthias Horsling, has bought the iron mines owned by Nelson people, in that vicinity and a plant is to be built next

IN THE LEAD!

In the **prompt** shipping of

Plate Glass

it is a well-established fact that we have constantly been in advance. The demand for our Plate is evidence that our efforts have been appreciated and has been such that to-day we have the **largest stock** and **plant** for handling same in Western Canada

Quotations for Plate delivery sound at your station by wire or mail on receipt of specification.

LIMITED
WINNIPEG, CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Dec. 15, 1905.)
Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

VALUES continue steady throughout the entire metal and hardware list, there being no change of importance to note this week. Business is fairly active in all lines, although the big Fall rush is now over. Collections are improving.

Game Traps—Still in some demand at following unchanged quotations.

H. & N., discount	50 and 5 p.c.
Victor, "	66⅔ p.c.
Newhouse, "	35 p.c.
Bear	$7 each

Lanterns—Prices are quoted as follows in an "open" market:

Cold blast lanterns	$5 25 per doz.
Coppered cold blast lanterns	7 25 "
Cold blast dash "	7 75 "
Lift Lanterns	4 25 "

Bluestone—Price for 1906 delivery is $5.75 per cwt.

Wire—Prices are steady. We quote:

Barbed wire, 100 lb	$3 00
Plain galvanized 6 to 8	3 39
" 9 2 50	2 90
Plain galvanized 10	3 50
" 12	3 10
" 13	3 20
" 14	3 90
" 15	4 45
" 16	4 60
Plain twist	3 00
Staples	3 50
Oiled annealed wire 10	2 96
" 11	3 02
" 12	3 10
" 13	3 20
Oiled annealed wire 14	3 30
" 15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—Prices have been steady since the recent advance in steel shoes. Quotations are as follows:

Horseshoes, iron, No. 0 to No 1	$4 65
No. 2 and larger	4 40
Snow shoes, No. 0 to No. 1	4 90
No. 2 and larger	4 65
Steel, No. 0 to No. 1	5 00
No. 2 and larger	4 75

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—The price has been steady since the recent decline to $2.60 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Pressed Spikes—Prices are quoted as follows since the recent advance:

Pressed spikes, ¼ x 5 and 6	$4 60
" " 5-6 x 5, 6 and 7	4 25
" " ⅜ x 6, 7 and 8	4 10
" " 7-16 x 7 and 9	4 00
" " ½ x 8, 9, 10 and 12	3 90
" " ⅝ x 10 and 12	3 75

Screws—No change in price. Demand continues brisk at following unchanged discounts:

Screws, flat head, iron, bright	85 and 10 p.c.
Round "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged. We quote:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—Unchanged in price. We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.20
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discounts are now 60 and 5 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g.hickory, doz	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—Prices are quoted as follows:

Bench axes, discount off list	40 p.c.
Broad " "	25 p.c.
Royal Oak, per doz	$ 6.25
Maple Leaf, "	8.25
Model "	8.50
Black Prince "	7.25
Black Diamond "	9.25
Standard Flint Edge, per doz	8.75
Copper King, per doz.	9.00
Columbian, "	10.75
Handled axes, North Star, per doz	7.75
" " Black Prince, per doz	9.25
" " Standard Flint Edge, per doz	10.50
" " Copper King, per doz	11.00

Butts—The discount on wrought iron butts is 70 per cent.

Churns—The discounts from list prices are 45 and 5 per cent.

Chisels—Quoted at 70 per cent. off list prices.

Auger Bits— Discount on common auger bits is 65 per cent.

Blocks—Discount on steel blocks is 35 per cent. off list prices; on wood, 55 per cent.

Fittings—Discounts are quoted as follows:

Wrought Couplings	60 p.c.
Nipples	65 and 10 p.c.
T and elbows	10 p.c.
Malleable bushings	50 p.c.
Malleable unions	60 p.c.

Grindstones—The price is now 1 3-4c. per lb.

Fork Handles—The discount is 40 per cent. from list prices.

Hinges— The discount in light "T" and strap hinges is 65 per cent. off list prices.

Hooks—Prices are quoted as follows:

Brush hooks, heavy, per doz	$8.75
Grass " per doz	1.70

Draw Knives—The discount is 70 per cent. from list prices.

Rules—Discounts are 50 and 10 per cent.

Washers—On small quantities the discount is 35 per cent.; on full boxes it is 40 per cent.

Wringers—There was a typographical error under this heading last week. Prices are as follows:

Royal Canadian, per doz	$30.00
R. B., per doz	34.75

Files—Discounts are quoted as follows:

" Arcade "	75 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

Building Paper—There is a steady demand for all lines at firm prices. We quote:

Joliette, plain	40c.
" tarred	65c.
Cyclone, plain	55c.
" tarred	80c.
Anchor, plain	55c.
" tarred	65c.
Pure fibre, plain	60c.
" " tarred	80c.

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—The price is steady since the recent advance. We quote as follows.

Kope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 75
Lathyarn	11 25

Solder—Quoted now at 21c. per lb. with concessions for large quantities.

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.
(Lengths 3, 4, 5 and 8 ft.)

	Painted	Galvanized
28 gauge	$2 85	$3 90
26 "	3 10	4 15
24 "	3 80	5 40

(Any lengths under 4 ft. 10c. per square additional.)

	Painted	Galvanized
28 gauge pressed seam	$3 00	$4 20
28 " "V" crimp	2 95	4 15

SIDINGS.
(Plain brick, rock face brick or stone 17¼ x 23.)

	Painted	Galvanized
No. 1 78 to the square	$3 00	$4 30
" 2 69 " "	2 75	3 90
" 3 55 " "	2 40	3 60

(Large sheets 28 in. x 60 in.)

	Painted	Galvanized
28 gauge	$3 00	$4 05

BEADED CEILING.

28 gauge, painted red	3 10

Vises—Prices are quoted as follows:

" Peter Wright," 30 to 34	4½c. per lb.
" " 35 to 39	14c. "
" " 40 and larger	13½c. "

Anvils—"Peter Wright" anvils are selling at 11c. per lb.

Power Horse Clippers—The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6. The "1904" sheep shearing machines are sold at $13.60.

Ammunition, Etc.— Prices and discounts are quoted unchanged as follows:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	20 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.

Loaded shells:

Dominion Eley's and Kynoch's soft, 12 gauge.	
black	16 50
chilled, 12 gauge	17 50
soft, 10 gauge	19 50
chilled, 10 gauge	20 50
Shot, Ordinary, per 100 lb	6 50
Chilled	7 00
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

Iron and Steel—Prices are quoted as follows:

Bar iron (basis)	2 60
Swedish iron (basis)	4 75
Sleigh shoe steel	2 75
Spring steel	3 25
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	13 00

Black Sheets—No change in price. We quote as before:

Black Sheets, 10 to 16 gauge, 100 lb	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Iron—The market is steady at the recent advance. We quote:

Apollo, 16 gauge	3 90
18 and 20 gauge	4 10
22 and 24 gauge,	4 45
26 gauge	4 40
28 gauge	4 65
30 gauge or 10¾ oz	4 95
Queen's Head, 24 gauge	4 60
26 gauge	4 65
28 "	4 90

Tin Plates—XXI plates have been advanced 50 cents. We now quote as follows:

Tinplate, IC charcoal, 20 x 28, box	9 50
" IX "	11 50
" XXI "	13 50

Terne Plates—Quoted at $9.00.

Canada Plates—Owing to a typographical error Canada plates, full polished, were quoted at 25c. last week. The price is of course $4.25. We quote:

Canada plate, 18 x 21, 18 x 24	3 50
Canada plate, 20 x 28	3 75
Canada plate, full polished	4 25

Sheet Zinc—The price is now $8.50 for cask lots, and $9.00 for broken lots.

Pig Lead—The price has been advanced to $4.75 per 100 lbs.

Iron Pipe—Prices are steady at the recent advance. We quote:

Black iron pipe, ⅛ inch	....
" ¼ "	2 55

Black iron pipe, ⅜ inch	2 85
" ½ "	3 15
" ¾ "	4 00
" 1 "	5 75
" 1¼ "	7 85
" 1½ "	9 40
" 2 "	12 90

Petroleum and Gasoline— Prices are quoted now as follows:

Silver Star, per gal	21c. ½
Sunlight "	22½c.
Eocene "	24½c.
Pennoline "	25½c.
Crystal Spray "	24½c.
Silver Light	22½c.
Gasoline, 70-72 (Engine)	25c.

(In barrels f.o.b. Winnipeg.)

Paints and Turpentine—Business is brisk in general lines. We quote as follows:

White lead (pure)	$7 00
Bladder putty, in bbls	0 02½
" " in kegs	0 02¾
Turpentine, pure, in barrels	1 04
Less than barrel lots	1 09
Linseed oil, raw	0 57
Boiled	0 60

Window Glass—We quote:

16-oz. O.G., single, in 50-ft. boxes—	
16 to 25 united inches	$2.05
26 to 40 "	2.20
16-oz. O.G., single, in 100-ft. cases—	
16 to 25 united inches	3.75
26 to 40 "	4.25
41 to 50 "	4.75
51 to 60 "	5.25
61 to 70 "	5.75
21-oz.C.S., double, in 100-ft. cases—

41 to 50 "	8.40
51 to 60 "	9.45
61 to 70 "	10.50
71 to 80 "	11.55
81 to85 "	12.60
86 to 90 "	14.75
16 to 95 "	17.30
6 to 100 "	

BRITISH COLUMBIA TRADE NEWS.

(Continued from page 27.)

Spring. A mono-rail road is to be laid for carrying the ore to Crawford Bay from the mines.

* * *

The lime deposits of Texada Island, in the Gulf of Georgia, have been actively developed and kilns operated for some years, a good export as well as local trade being done. Most of the export has been by the Australian steamers, to Honolulu and Australia. Recently, however, a shipment of 1,000 barrels was sent to Tacoma. As the Tacoma Steel Co. is now operating the Marble Bay mines, and the Texada lime kilns—that is the probable explanation of the shipment. It is none the less noteworthy, as indicating what may be developed in this trade.

* * *

Three thousand tons of ore from the Britannia mine, Howe Sound, have already been shipped to the Britannia smelter, Osborne Bay, Vancouver Island. About half that amount has been sent to the Hodley mines smelter, Prince of Wales Island, in the north. A similar quantity of the Prince of Wales ore has been shipped to the Britannia, the two companies exchanging ores for fluxing purposes, in the smelting process.

Three hundred tons of ore per day are being taken from the Britannia, now that operations have been got down to full basis. The big concentrating plant is working 12 hours a day and all ore below 5 per cent. is put through.

While all the pig iron used in the various foundries of this coast has to be brought into the province, there is as a rule a very considerable stock on hand. The facility with which it can be obtained from the Old Country, and the competition in the United States has always had its influence in making pig iron cheap and easy to get in B.C. But the condition here just now is that there is no reserve stock, and the price has gone up from $1.50 to $2.00 per ton on the average. It is estimated that consumption in this province is some 300 tons per month, so that there is quite a field to supply. In pig lead, tin and tin plate, all articles which are largely consumed in manufactures in B.C., the price is also high in sympathy with conditions elsewhere.

The rise in lead has been so marked as to stop payments of the bounty given by the Dominion Government. It was paid on a sliding scale, which reduced the bounty as the price rose. Just now the price is so high that the bounty is nil. As salmon canners have to make preparation almost a year in advance for their supplies of lead, tin and tin plate, the belated ones are hit hard by the high prices.

Present quotations are: Lead, $4.50 per 100 lbs., against $3.15 early in the season; tin plate, $3.75 per box, against $3.30 earlier; pig tin, 36c. per lb., against 33 1-2c. early last month. At these prices the market is still rising.

* * *

In building material there is a constant and remarkable demand, though the season is well advanced into the rainy weather. Early rains had the effect of making it hard to finish work, and later the weather was extremely fine, so that not only were unfinished contracts carried out, but much new work begun, which would otherwise have been left over to next season. There are a great many men employed in the building trades in Vancouver at the present moment. The mills and factories are full of orders yet, and prospects for continuance are bright. While there has been some disturbance in the shingle mill trade, that is only natural, as their business is always slack this season, depending, as it does, largely on eastern orders.

* * *

For the first time in many years sailing vessels are now on charter to load in the Fraser River at New Westminster. The opening of the old Ross-McLaren Mills at Millside, above the Royal City, has been followed by the dredging out of the deep channel of the river through the Annacis Island bar, by the Government dredge King Edward VII, and to-day a lumber carrier, the Wethersfield, is berthed at the Ross-McLaren, or Fraser River, mill, as it is now called. She will load for Australia. The second ship under charter is the Artemus, which will load for South America.

The number of lumber charters already made is very satisfactory, the B. C. Mills T. & T. Co. having no less than eight already.

* * *

The next big freight steamer to arrive direct from Liverpool is the Ping Suey of the China Mutual line. She brings many hundreds of tons of steel, iron, plate and other metal manufactures for the wholesale trade here and Victoria. Besides Old Country freight she will also have cargo from Oriental ports. She arrives on Dec. 17.

rain water

"Metallic" Eavetrough and Conductor Pipe are made of firmer metal, are better galvanized and more ornamental than those of other makes. There are no flaws or weak spots in "Metallic" Eavetroughing caused by faulty rolling or bending.

Eavetroughs of any kind demand the utmost possible strength, and in this respect "Metallic" Eavetroughs are superior to anything made. Corners are provided for by accurate mitres.

When once put on they never sag or twist.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

CANADA'S METAL INDUSTRIES.

MILLIONAIRE SCHWAB'S VIEWS.

"In the next ten years," said Charles M. Schwab last Thursday to a Manhattan professional man whom he was anxious to serve in return for invaluable assistance, "the new big fortunes will be made in mines. My advice to you is to watch out carefully and to get aboard at the earliest possible moment. To-day you can buy for $1 what will cost $5 in two years. I admit all you say of the outlook for railroads; but you must bear in mind that the roads get their money by carrying the industrial output. The two are inseparable. If one is to prosper it is because the other does."

Thus said the first president of the United States Steel Corporation, as he sat in his private car and ejected financial philosophy between the whiffs from an expensive cigar. The present gigantic operations by the "Pittsburg interests" in Nevada gold lands reflect his carefully considered policy; and it is not an accurate description of his mental state to call it a recent change of view brought about by men like John McKane, who is a Canadian, Donald Gillies, Albert S. Watson, Uri Curtis, Chris Zabriskie and George S. Nixon—the picturesque pioneers of the Tonopah region. Mr. Schwab took the initiative in arranging the big combinations now accomplished because of his faith in mines as the "leading article" of the next decade.

* * *

A rich find of gold is reported from the Laurentian mine, near Wabigoon, Ont.

A nugget weighing 250 pounds of almost pure silver has been found at Cobalt.

The Dominion Iron & Steel Co. has set in motion a new 850 horse power unit, which is the largest of its type in the Maritime Provinces.

The Government Diamond Drill now working at Cobalt has reached a depth of 340 feet and it is found that the rock is still rich in native ore.

The C.P.R. is preparing to operate extensive coal fields near Hosmer, B.C. Owing to agreements productive work cannot be commenced until 1907.

Ten tons of magnetic iron have been shipped to the "Soo" by the B. C. Mills, Timber & Trading Co. from its mines on Redonda Island, eighty miles from Vancouver.

The Le Roi amalgamation scheme is not to go through according to cable reports of a meeting of the shareholders at London, Eng., last week. The decision means much to Rossland.

The Nova Scotia Steel & Coal Co is making preparation to open a new colliery at Sydney Mines, N.S. The company also intend to install an electrical plant to develop power for their mine.

The 88th Annual Meeting of the Bank of Montreal

THE eighty-eighth annual general meeting of the shareholders of the Bank of Montreal was held in the board room of the institution at noon yesterday.

There were present: Hon. Sir George Drummond, K.C.M.G., vice-president; Hon. Robert Mackay, Messrs, R. B. Angus, E. B. Greenshields, A. T. Paterson, R. G. Reid, Hon. J. K. Ward, Dr. W. Gardner, Messrs. G. F. C. Smith, F. S. Lyman, K.C.; Angus Hooper, George Durnford, Richard White, A. Piddington, Henry Dobell, John Turnbull, B. A. Boas, C. R. Black, Henry Morton G. A. Greene, L. Sutherland W. H. Evans, M. S. Foley, W. Stanway, M. O'Shaughnessy, W. D. Gillean, D. Morrice, A. G. Watson, G. H. Matthews, P. F. McCaffrey, J. Scott, W. B. Blackader, James Tasker, Percy R. Gault, and John Morrison.

On the motion of Mr. R. G. Reid, Sir George Drummond, Vice-President, was unanimously voted to the chair, in the absence of the President, the Right Hon. Lord Strathcona and Mount Royal.

On the motion of Mr. A. Piddington, seconded by Mr. Henry Dobell, it was voted: "That the following gentlemen be appointed to act as scrutineers:—Messrs. F. S. Lyman, K.C., and G. F. C. Smith; and that Mr. James Aird be secretary of the meeting."

The General Manager.

The General Manager then spoke as follows:

I purpose confining my few remarks to the balance sheet submitted to you, and to one or two matters more closely connected with banking, leaving the general condition of business in the country to be dealt with by the Vice-President.

The principal feaures in the statement are the increase, since last year, of $2,000,000 in our circulation, an indication of the universal activity in business, and of $7,750,000 in deposits not bearing interest; but of this latter a considerable proportion was a temporary deposit made at the end of our fiscal year, and since withdrawn. Our deposits bearing interest show a satisfactory increase of $16,600,000. Our immediately available assets stand at $68,000,000, a greater amount than, as a rule, we consider necessary, but in view of the rather uncertain future of Continental finance, owing to the state of affairs in Russia and the somewhat boom condition in this continent, it is well to be strong, and in any case we are in a good position to take advantage of any desirable business offering. Our loans and discounts have increased $7,000,000, accounted for partly by the increased demands of the commercial community, and partly by the absorption of the People's Bank of Halifax.

The low rate ruling for call money in England and the United States during our fiscal year affected our profits adversely, as we are obliged to carry a large portion of our reserve in those markets; but of late there has been a decided improvement, which may be maintained during the winter.

Owing to the magnificent crop and the general activity in business, an unusual strain was placed on the circulation, but at the highest point attained by all the banks, about $79,000,000, there was still a margin of $4,500,000; and with the addition of new banking capital and the increase of branches, it seems as if, for some time to come, the circulation provided will be sufficient for the needs of the country. The advantage of the Canadian system has been amply demonstrated during the late pressure for money. Notwithstanding the heavy demands to move the largest crop in our history, the interest rate to our people has remained normal. We have only to glance at the condition of affairs across

The Directors' Report.

The report of the Directors to the Shareholders at their eighty-eighth annual general meeting was then read by Mr. E. S. Clouston, General Manager, as follows:—

The Directors have pleasure in presenting the Report, shewing the result of the Bank's Business for the year ended 31st October, 1905:

Balance of Profit and Loss Account, 31st October, 1904		$ 583,196 01
Profits for the year ended 31st October, 1905, after deducting charges of management, and making full provision for all bad and doubtful debts		1,638,659 40
		$2,221,855 41
Dividend, 5 per cent., paid 1st June, 1905	$700,000 00	
Dividend, 5 per cent., payable 1st December, 1905	720,000 00	
		1,420,000 00
Balance of Profit and Loss carried forward		$ 801,855 41

Since the last annual meeting of the Shareholders, the Bank has acquired the Assets and Business of the People's Bank of Halifax, with twenty-six branches. The Bank has also established since the last Annual Meeting, Sub-Agencies at the following points, viz.: Altona, Oakville and Logan Avenue (Winnipeg), in Manitoba; Enderby and Nicola in British Columbia, and Hochelaga (Montreal), and is about to establish Sub-Agencies at Fort Rouge (Winnipeg), and Ste. Anne de Bellevue.

The headquarters building on St. James Street is now completed and in occupation.

In response to the desire expressed by a number of our Shareholders, the Directors propose that the dividend should be paid quarterly, instead of half-yearly, viz.: on the first day of March, June, September and December.

All the Offices of the Bank, including the Head Office, have been inspected during the past year.

STRATHCONA AND MOUNT ROYAL,
President.

The General Statement.

The General Statement at 31st October, 1905, is as follows:—

LIABILITIES.

Capital Stock		$14,400,000 00
Rest	$10,000,000 00	
Balance of Profits carried forward	801,855 41	
	$10,801,855 41	
Unclaimed Dividends	701 57	
Half-yearly Dividend, payable 1st December, 1905	720,000 00	
		11,522,556 98
		$25,922,556 98
Notes of the Bank in circulation	$12,996,181 00

Debts secured by mortgage or otherwise		289,340 03	
Overdue debts not specially secured (loss provided for)		118,245 05	
			$ 88,999,378 98
			$158,232,409 51

Bank of Montreal,
Montreal, 31st October, 1905.

E. S. CLOUSTON,
General Manager.

the line to see what fluctuations in rates for money the public are subjected to under the system there in vogue.

In March last, the Bank of Yarmouth failed under circumstances reflecting much discredit upon those responsible for its condition, and, for the first time since the incorporation of the Canadian Bankers' Association, that body had to exercise the power conferred upon it by Parliament in 1900, of assuming supervision of the affairs of a suspended bank.

A liquidator chosen by the Canadian Bankers' Association was subsequently appointed by the court sole liquidator. The results have been highly satisfactory, particularly when viewed in the light of what has followed former failures of Canadian banks. The winding up of the defunct bank has been conducted with remarkable expedition and economy, and the rights and interests of the creditors so well looked after that the liquidator has been able, in nine months, to pay all of their claims, with interest added thereto. That no loss to the depositors and other creditors of the Bank of Yarmouth has resulted from this failure is, it must be admitted, largely due to the prompt and creditable recognition by its unfortunate shareholders of their liability for the utter insufficiency of assets to pay the debts of the bank in question.

An interesting event in financial circles was the offering here of a portion of the Japanese loan, the first time in the history of Canada of any foreign loan being issued locally, and, considering the short time at our disposal, the success was surprising.

In conclusion, I may say that the one word written large in the records of Canada this year is "Prosperity." Railways, manufacturing industries, merchants, farmers, all are prosperous. Immigration grows steadily; labor has full employment, and is well remunerated. Probably never before have we had a twelvemonth of such universal prosperity, and it is during a year like this that everyone should set his house in order. Collections should be pressed, and manufacturers should husband their resources and strengthen themselves in every way; for they are to a great extent prosperous by the grace of their neighbors, and when adversity comes to other countries, the American bargain counter will be opened in Canada, and our manufacturers and their employees will surely suffer.

Vice-President's Remarks.

The Vice-President, in moving the adoption of the Directors' report, said:

The position of the Bank is fully exhibited in the statements laid before you and the remarks of the General Manager. Following, however, the practice of many years' standing, I venture to offer a few observations.

The remark has been made before, and is now repeated, that the profits of banking, and consequently the cost to the public of the use of money, are steadily decreasing. This is due mainly, I think, to the accumulation of wealth in the country, the consequent increase of the number of banking companies and of their capital, and the resulting keenness of competition. Proof of this is to be found in the following figures:

1st. As to the accumulation of wealth. The deposits in all the chartered banks in the Dominion, in 1870, were 49 millions of dollars, in round figures, omitting fractions of a million; in 1880, were 85 millions; in 1890, were 136 millions; in 1900, were 305 millions; in 1904, were 470 millions.

The Dominion Government Savings Bank held in the same year (1904), nearly 62 millions, making bank and Government deposits 532 millions.

2nd. As regards banking facilities. Five new banks have gone into operation since 1900, with an authorized capital of $9,000,000. Five have been absorbed into other banks, but their capital presumably remains under other control, and one bank, referred to by the General Manager, with a capital of $300,000, has failed. It may also be mentioned that charters have been obtained from Parliament during the last three years of eleven new banks, with a capital of $19,000,000.

As regards our own Bank, it has been the care of the Directors to advance with the times, and I give you a few figures to show the progress which it has made.

In 1863 the capital was $6,000,000; assets, $15,252,000.

In 1873 the capital was $11,296,831; assets, $34,252,000.

In 1879 the capital was $11,999,000; assets, $36,221,000.

In 1887 the capital was $12,000,000; assets, $42,000,000.

TAXITE
REGISTERED
SHERWIN-WILLIAMS RELIABLE PAINT AND VARNISH REMOVER

EFFICIENCY is the characteristic of Taxite. It is the simplest and most satisfactory way of removing old paint and varnish coats from furniture and all woodwork. Good, steady sales and profits come from customers that are pleased—Taxite pleases them.

Taxite does not injure the hands nor raise or spoil in any way the grain of the finest wood. It is applied with a brush and the wood is cleaned with a knife. The cut shown above illustrates the simple method of applying Taxite. Following the directions printed on each package the customer cannot fail to obtain the most satisfactory results. Taxite is a specialty that will always show up with a profit when properly pushed.

In 1890 the capital was $12,000,000; assets, $46,166,000.

In 1905 the capital was $14,400,000; assets, $158,470,000.

Our branches, which in 1863 numbered 29, are now 100.

General Trade of the Country.

A review in detail of the various trade and manufacturing industries may be summed up in the general report of almost unbroken prosperity. Probably never in Canada and the United States have crops of all kinds been better in quantity and quality.

In regard to one of our staple industries, the lumber trade, I am tempted to express the conviction that we are using up our resources in a most reckless fashion, certain to end disastrously unless we take prompt steps to treat it as other crops, and replant on an adequate scale.

The increase of manufactories, thereby creating a home market for produce of every kind, is most marked. In this city and neighborhood a great number of large factories are springing up, and whatever may be said of our tariff, it unquestionably has had the effect of inducing the manufacture in this country of goods previously imported, with all the advantages of increased employment and circulation of money in this country. A number of these manufactories are branches, or offshoots, of industrial organizations in the United States.

The value of the home market is not sufficiently appreciated, if the statistics published by a recent writer be true, that "Western Canada produced two and a half times as much wheat, twenty-five times as much oats, and thirty-four times as much barley as Canada exported."

The failures in Canada are considerably smaller this year than last, being. 1904, $11,189,223; 1905, $9,511,472.

The feature of the year, however, is the splendid crop which has just been harvested in the Northwest Provinces and in Ontario. As regards the former, the most sanguine anticipations have been realized, and it seems beyond doubt that the following estimates of this season's crop in Manitoba and the Northwestern Provinces are conservative:

Wheat, 90 million bushels, worth on the spot, say, 65c.; oats, 65 million bushels, worth on the spot, say, 25c.; barley, 13 million bushels, worth on the spot, say, 30c.; flax, 1-2 million bushels, worth on the spot, say, 80c.; rye, 1-3 million bushels, worth on the spot, say, 35c. In all, 169 million bushels of grain.

Of course, a proportion of these crops will be consumed by the farmer, as no doubt will all the root crops—of which potatoes alone are estimated at 8,000,000 bushels—as well as hay, but of these I take no account.

At the prices set down, it is not difficult to reach an approximate sum of 75 millions of dollars, or 15 million pounds sterling, to be distributed among a comparatively small population, and won from a soil which was considered barren, and surrendered to the wilderness only a few years ago.

In addition to the foregoing, and not included in the above estimate, 70,000 cattle were disposed of during the year in the Northwest.

Incidentally, I may mention that I am informed by expert millers, that this year's wheat is so good in quality that 7 per cent. less of it is required to produce a given quantity of flour than an average.

It is asserted that the area so far brought under cultivation does not, from the most accurate information obtainable, much exceed 5 per cent., and certainly it is well under 10 per cent. of the area available, and waiting for occupants.

In this connection I may quote here a sentence from an able and well qualified Government officer, who has just completed a wide survey of the Territories. He says:

"The immense wealth so long stored in the virgin soil of the great western country will be gradually developed, and the fact that Canada is destined to rapidly become one of the greatest food producing nations in the world will soon become apparent to all, in the volume of her exports."

The great extensions of the railway systems operating in this country must not be passed over. The Canadian Pacific company is spending vast sums in improvements and extensions. The Canadian Northern is pushing westward, while the Grand Trunk Pacific is preparing for an extension to the Pacific, and the Government of Canada has the necessary powers to duplicate the railway connection between Quebec and Winnipeg, and is now surveying the line.

With general political events we have nothing to do, except as regards their effect on our financial institutions. A note of thankfulness was heard when an end was put to the mighty war in the Farther East.

It was specially grateful to this community when a friendly understanding was reached between England and France, and we trust that the portentious cloud overhanging Russia may be dissipated by wise and liberal measures. Meanwhile, it remains an ominous factor, exciting the liveliest apprehensions among Russia's creditors, and the deepest interest in the whole civilized world.

I can only, in conclusion, echo the General Manager's advice, that the abounding prosperity of our country should be prudently accepted and used.

I move: "That the report of the Directors, now read, be adopted and printed for distribution among the Shareholders."

The motion was seconded by Mr. A. T. Paterson, and after some appreciative remarks by Mr. John Morrison, it was unanimously adopted.

Amendments to By-laws.

The Vice-President then remarked: I have now to ask you to consider amendments to the by-laws, which the Directors deem advisable. The first is an amendment to by-law No. 3, the alteration being to make the number of direc-

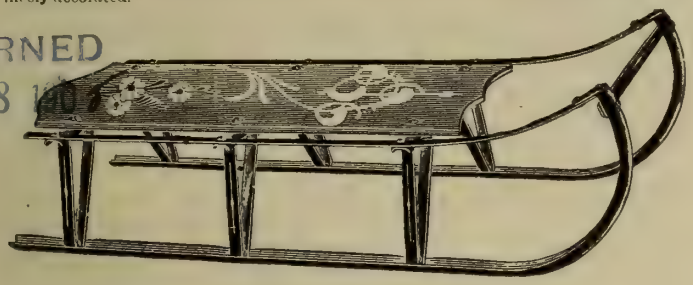
"STAR" STEEL SLEDS AND COASTERS

Steel Sled

No.	Length	Width	Height	Knees	Per dozen
00.	27 inch	9 inch	6 inch	2	.... 16 20



It is all steel except the top. The runners are made of the celebrated round back angle steel used on all Star Steel Sleds. It has wood top, well painted, varnished and nicely decorated.

Coaster

No.	Length	Width	Height	Knees	Per dozen
1.	32 inch	9 inch	4½ inch	2	.... 16 20

This is the best steel coaster ever put on the ma ket for the money. All steel except the top. The runners are made of the celebrated round back angle steel used on all Star Steel Sleds. It has wood top, well painted, varnished and nicely decorated.

Steel Sleds

No.	Length	Width	Height	Knees	Per dozen
0.	28 inch	10½ inch	7 inch	2	.. 18 25
10.	30 "	12 "	7½ "	2	.... 21.60
20.	33 "	12 "	7½ "	2	.... 24.30
30.	36 "	12 "	7½ "	2	.... 29.70

They are constructed with raves the same as the most expensive sled. All tops are handsomely hand-decorated. The running gears are finished in assorted colors, artistically st iped.

Steel Sled

No.	Length	Width	Height	Knees	Per dozen
110.	30 inch	12 inch	7½ inch	2	.... 27.00
120.	33 "	12 "	7½ "	2	.... 29.70
130.	36 "	12 "	7½ "	3	.... 35 10

The Goose-necks are made of malleable Iron and tinned, and make a most attractive appearance in connection with the handsome body colors. The running gears are painted in assorted colors and artistically striped.

Coaster

No.	Length	Width	Height		Per dozen
1.	34 inch	10½ inch	4½ inch	.....	20.25
2.	37 "	11½ "	4½ "	.....	22.95
3.	40 "	12 "	4½ "	.....	25 65
4.	43 "	12 "	4½ "	.....	32.40

They are attractive. The runners are made of special round back angle steel, and this makes the fastest coaster that ever sl'd on snow. Running gears finished in assorted colors, artistically striped.

American Boys' Bobs

No.	Length	Width	Height		Per dozen
202.	44 inch	11 inch	5½ inch	.....	48 60
203.	48 "	11½ "	5½ "	.....	54.00

They ride easier than other bob-sleds, because both forward and rear runners are made to oscillate, thereby going over uneven ground more smoothly The runners are made of special round back angle steel, which gives all Star Steel Sleds such speed. The knees are constructed according to the patented bridge truss principle, which makes the sleds so strong. The runners are fin shed in assorted colors, artistically striped The top are handsomely hand-decorated.

tors ten instead of nine, as at present. Perhaps you are aware that up to the last session of Parliament, the General Banking Act only permitted the election of nine directors to any bank. They were not to be fewer than a certain number, and not more than nine. That has now been changed, and practically the number of directors is unlimited, if the shareholders so desire. The proposal of the Directors now going out, is that the number be made ten, instead of nine; and the reason will appear a little later in the proceedings. I would, therefore, move:

"That, whereas it is advisable to increase the present board of nine directors to ten, by-law No. 3 is hereby amended by striking out the word 'nine,' as appearing in said by-law, and inserting in its place the word 'ten.'"

This was seconded by Mr. A. T. Paterson, and was unanimously agreed to.

The Vice-President—The next alteration is:

"Whereas it is advisable that power be given to the Shareholders to elect an honorary president, by-law No. 6 is hereby amended by adding to it the following words:

"'The Directors may also, at their said first meeting, elect by ballot one of their number to be honorary president.'"

It is due to you to say that this has special reference to Lord Strathcona. He has occupied the post of President for eighteen years, and last year he expressed a desire to be relieved of it. The Directors were unwilling to have his name severed from the Bank which he had so long and usefully served. The creation of an honorary president was authorized in the amendment of the Banking Act, and under that authority this can now be done. I will, therefore, move that the resolution which I have just read be adopted.

This was seconded by Mr. A. T. Paterson, and was concurred in unanimously.

The Vice-President—It seems proper at this stage that the long and valued services of Lord Strathcona, in connection with this Bank, should be acknowledged by the Shareholders, and I have the honor and pleasure of moving, seconded by Mr. E. B. Greenshields, that a cordial recognition, in suitable terms, be sent to Lord Strathcona expressing the appreciation in which the Shareholders—and they include the Directors—hold him and his services to the Bank.

Mr. E. B. Greenshields—I have very much pleasure in seconding the resolution just proposed. We all feel that the Bank has been honored in the past by having Lord Strathcona as its president. When he first went to London as Canadian Commissioner, he hoped to be frequently on this side of the Atlantic and at our meetings; and it was with much regret that he found himself unable to be here as often as he had expected. Not only should his great services to the Bank be noted; but we also wish to put on record as shareholders of the Bank and as citizens of Montreal and the Dominion of Canada, our very high opinion of him as a man. We feel proud of having had him as president of this Bank, and it is with very great regret that we hear that the connection is to be to a certain extent severed. But we are all pleased that he is to remain with us as the Honorary President of the Bank, and that his name will still be associated with this institution. I know I express the feelings of every shareholder when I say that we all have the greatest admiration for him in his public capacity as High Commissioner for Canada, and appreciate all he has done for this country, but besides this we would like to assure him that we have a very warm feeling of personal regard for himself.

Mr. John Morrison—I give my cordial assent to the motion, for a more deserving gentleman it would be hard to find.

The motion was unanimously and cordially adopted.

Thanks Are Tendered.

Mr. B. A. Boas then moved:

"That the thanks of the meeting be presented to the President, Vice-President and Directors for their attention to the interests of the Bank."

This was seconded by Mr. W. Stanway, and was carried unanimously.

Mr. E. B. Greenshields moved:

"That the thanks of this meeting be given to the General Manager, the Assistant General Manager, the Inspector, the Managers and other Officers of the Bank, for their services during the past year."

In making the motion Mr. Greenshields remarked:

I wish to say that the opinion of the Directors is unanimous that in the General Manager, the Assistant General Manager, the Inspectors, the Managers and the other officers of the Bank we have a thoroughly efficient and reliable staff to carry on the work. I had the pleasure last year of meeting a number of the Managers, from Winnipeg to Victoria, and I also know many of those nearer Montreal. I am very much pleased always to see among them a fine "esprit de corps," that inspires the feeling that the Bank of Montreal is the institution to work for, and that ability and conscientious work will always be recognized and rewarded.

Hon. Robert Mackay seconded the motion, which was unanimously adopted.

Mr. C. R. Black suggested that it would be in the interests of the Shareholders generally if the management would consider the mailing of cheques for dividends, as other banks did, now that the dividend was to be quarterly, instead of the Shareholders having to go to the Bank.

The General Manager—I will take that into consideration, and see if it cannot be carried out. I also beg to thank the Shareholders on behalf of the staff for the very kind way they have spoken of us.

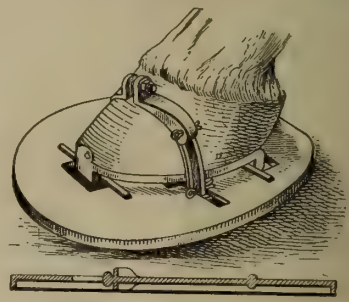
The Vice-President—The suggestion of Mr. Black will be referred to the Board.

Mr. John Turnbull moved, seconded by Mr. George Durnford:

"That the ballot now open for the election of Directors, be kept open until 2 o'clock, unless 15 minutes elapse without a vote being cast, when it shall be closed, and until that time, and for that purpose only, this meeting be continued."

This was unanimously concurred in, and a very cordial vote of thanks was accorded the Chairman, who acknowledged the same.

The Directors.



The ballot resulted in the election of the following Directors:

R. B. ANGUS.
E. S. CLOUSTON.
HON. SIR GEORGE DRUMMOND, K.C.M.G.
EDWARD B. GREENSHIELDS.
SIR WILLIAM MACDONALD.
HON. ROBERT MACKAY.
ALEXANDER T. PATERSON.
ROBERT G. REID.
JAMES ROSS.
RIGHT HON. LORD STRATHCONA AND MOUNT ROYAL, G.C.M.G.

At a meeting of the Board of Directors held the following day. Sir George A. Drummond was elected President, succeeding Lord Strathcona, and Mr. E. S. Clouston was elected Vice-President and General Manager.

A SOFT GROUND HORSESHOE.

QUITE a demand has recently arisen for soft-ground horseshoes, that is, broad, flat shoes which, owing to their large area, will prevent the feet of horses from sinking unduly into the ground. A simple shoe of this type has recently been invented, which is so designed that it can be easily reversed. The advantage of this design will be particularly felt in Winter time, as the shoe is prevented from balling up with snow. As the reversible shoe is smooth

Soft Ground Horseshoe.

at one side, it will be found advantageous for use on horses when mowing lawns. It consists of a plate with a flange projecting from one face along the periphery and formed with slots to admit the calks of a horseshoe. Ribs on the plate prevent the calks from sliding back and forth on the plate. At each side a T-slot is formed to admit the head of a clamping strap. The two straps are bolted together over the hoof of the horse, as shown. One of the straps is formed of two members which are adjustably connected by means of a pin. This permits of adapting the shoe to different sizes of hoofs.

Messrs. J. W. Harris Co., Limited
Montreal

Dear Sirs,
I have been using your "AEOLIAN" Ventilators on several houses in this city with the best results. The tenants of these houses declared that your Ventilators are of great advantage to them. I also installed two (2) 18" on my stable and I can say that your Ventilator cannot be surpassed by any to take out the sweating or the bad smell in any room.

PAINT, OIL AND BRUSH TRADES

CANADA PAINT CONVENTION.

IN the board room of the general office building, Montreal, the travelers and officials of the Canada Paint Co. are met this week, in their 13th annual convention, to discuss the various problems which arise in connection with their work. A fine, intelligent lot of men, and the entire freedom from levity which characterizes the proceedings of the convention, shows that it is taken seriously.

Hardware stores, generally, have stopped selling paints for the season, and are booming the Christmas present end of their business, so that these "knights of the grip," with their year's work ended, are, at the same time, resting from their labors, enjoying themselves in Canada's metropolis, and taking on cargoes of confidence and enthusiasm for the coming year. Under the chairmanship of Mr. W. H. Evans, the following travelers and officials are gathered around the table: H. W. Aird, W. H. Allison, Ed. Barry, Frank Bell, R. Bremner, G. Brown, W. Brown, H. Clucas, N. Coleman, J. Cox, J. Craig, F. Curran, Mr. Day, L. N. Dansereau, H. H. Ellis, W. J. Good, W. D. Hamilton, A. Hellems, J. Kyle, A. S. LeBlanc, S. H. Lewis, C. Little, A. J. Munro, W. H. Newton, G. R. Nimmo, C. O'Connor, C. O'Flaherty, E. Paddon, H. Stubbs, John Thomson, S. Ward, G. Wood.

VARNISH TROUBLES.

THERE is probably no trouble with varnish that is more difficult to account for than pitting, that is, the appearance of holes or depressions upon the newly varnished surface. Pitting is even sometimes difficult to recognize, as often pin holes will be the only evidence of trouble, and again the depressions will be of some size.

The most frequent causes of the trouble are lack of preparation of the surface to be varnished. Grease or smoke almost invisible to the naked eye will accumulate on a varnished surface, and if not carefully removed will cause pitting.

Extreme heat and humidity, with lack of proper ventilation, will also cause varnish to pit. Sometimes a condition of the atmosphere will cause varnish to pit for a short time and later on in the same day, the same varnish will give no further trouble.

Where the pitting is of a very serious nature the only remedy to be found will be a removal of the varnish coat. In slight cases the trouble can be overcome by allowing the surface to become thoroughly dry, when it can be rubbed with powdered pumice and water and re-varnished.

Varnish troubles in nearly every instance come from a lack of knowledge of proper preparation of the sarface to be varnished. Coal smoke, grease from handling and grease from fumes, will all combine to make trouble. Where a surface is left too long between coats an almost invisible fog settles and the surface should be cleaned with water and chamoised before applying further coats. Another serious cause of trouble is the use by the painter of a chamois which he occasionally uses upon his face or hands to wipe them off; for cleaning the surface to be varnished.

The best results can be obtained when varnish is applied early in the day — when possible it should never be applied after 4 p.m. A room should never be under 60 degrees or over 70 to 75 degrees when varnish is applied.

ENGLISH OIL MARKETS.

The feature in the English linseed oil market has been a rather large import of seed, which seems to have checked a rising tendency. A further cause for hesitation on the part of buyers was the diminution of the export trade, which shows very little life just now, and possibly another feature led some dealers to suspend operations—namely, the fact that after a cessation of supplies of seed from the United States, lasting from early in 1904 until last month, shipments from that quarter have been resumed. The quantity of seed from this source was under 3,000 qrs.—and the fact of resumption of shipments may mean little or nothing, but it may also mean that America will not be competing so keenly for Argentine seed in the near future. The imports for ten months of the year are still more than half-a million quarters short of the 1904 figures, and the year's total must remain substantially behind that of last year.

KEEP STOCKS IN GOOD ORDER.

A paint stock in good condition is worth fifty per cent. more to a retailer than a stock that shows the worse of wear and looks shabby. Handing out to prospective paint buyers soiled, dusty sample cards never creates a very favorable impression.

Paint does not cease to sell as soon as cold weather comes. To be sure there is little outside work done after that, but think of all the inside work. Furniture stains, floor paints, enamels, and all those lines should sell just as well now as in the Summer—in fact, better. There is much repairing of furniture and fixing up generally done in the early Winter.

This Journal has three classes of readers. First, those who are already customers of ours; second, those who are not our customers but should be; third, the few left over from the above.

To you all we extend a hearty Christmas Greeting, and may the year 1906 be the most successful that has ever been.

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, December 15, 1905.

CONDITIONS locally are extremely quiet this week, as is to be expected at this time of the year. Nearly all travelers are assisting the staff at headquarters to take stock .

The only change in price to occur during the week was in turpentine, which has declined again to 93c.

Linseed Oil—Last week's advance is well held. We quote as follows: Raw, one to four barrels, 46c.; five to nine barrels, 45c.; boiled, one to four barrels, 49c.; five to nine barrels, 48c., f.o.b. Montreal. Net 30 days.

Turpentine—A further decline during the week of 3c. leaves prices as follows. Single barrel, 93c. per gallon. Two barrels or over, 92c. For smaller quantities than barrel, 5c. extra per gallon is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Ground White Lead—Our quotations are as follows: Best brand Government standards, $5.65 to $5.80; No. 1, $5.40 to $5.55; No. 2, $5.05 to $5.30; No. 3, $4.80 to $5.05; all f.o.b. Montreal.

Dry White Lead—Prices are: Barrels, $5.40; 100 lb. packages, $5.65; 6 to 10 lb. tins, $6.65.

Dry White Zinc—We quote as follows: Pure dry in casks, 7 1-2c.; in 100 lb. kegs, 8c.; No. 1 zinc in casks, 6 1-2c.; in 100 lb. kegs, 7c.

White Zinc (ground in oil)—We quote: 25-lb. irons, 8c. to 10 1-2c.; No. 1, 6 3-4c.; No. 2, 5 3-4c.

Putty—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Conditions are steady at the following prices: Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—We quote: Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs. $4.75; and smaller quantities, $5.50.

Gum Shellac — We still quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

Shellac Varnish — Our prices are: $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

Mixed Paints—We are still quoting from $1.20 to $1.40 per gallon.

Castor Oil—Advances have been made for forward shipments, but we still give the following prices: 7 1-2c. to 8 1-2c., according to lots.

Refined Petroleum—The demand locally continues very good and prices are unchanged. We quote as follows: American water white, 16 1-2c. and 17 1-2c.; Canadian prime white, 14 1-2c. and 15 1-2c.; 18 1-2c. and 19 1-2c. ex warehouse.

Window Glass—The market is still very firm. Bookings for Spring shipments are being placed in good quantities. We quote: First break, 50 feet, $2.10; second break, $2.20; first break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24.00, and twelfth do., $28.50.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto December, 15, 1905.

LINSEED oil has been advanced owing to a stiffening of prices in England. Rumors of another drouth in India with probable higher prices for seed and slight advances in the United States have also been factors tending to increase prices on the local market.

Turpentine has become stronger on the southern markets, but the low prices which prevailed there recently have had the effect of bringing prices down here. The ruling figure is now 95c., some having been selling above that figure.

Business is keeping up well, but shows a falling off.

White Lead—Ex Toronto, pure white, $5.80; No. 1, $5.37 1-2; No. 2, $5.00; No. 3, $4.25; No. 4, $4.50 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 1-2 lb. packages; genuine dry white lead, in casks, $5.25.

Red Lead—Genuine in casks of 560 lbs., $4.75; ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V., M., in casks,

$6.50; in 25 lbs., $7.50; in 12 1-2 lbs., $8.00; Lehigh, in casks, $5.50; in 25 lbs., $6.00; in 12 1-2 lbs., $6.50.

Shingle Stain—In 5-gallon lots, 57 to 90c. per gallon.

Paris White—90c. to $1.00 per 100 lbs.

Whiting—60c. to 65c. per 100 lbs.; Gilders' whiting, 75c.

Paris Green (for 1906)—We quote. Barrels, 600 lbs., 15 1-4c. to 15 3-4c.; kegs, 250 lbs., 15 12c. to 16c.; drums, 25 lbs., 16 1-2c. to 17c.; drums, 50 and 100 lbs., 16c. to 16 1-2c.; 1 lb. packets, 17c. to 17 1-2c.; 1 lb. tins, 18c. to 18 1-2c.; 1-2 lb. packages, 19c. to 20 1-2c. per pound.

Shellac Varnish — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 49c.; boiled 52c.; 5 to 9 barrels, raw, 48c.; boiled, 51c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine—Single barrel lots, 95c. f.o.b., point of shipment, net thirty days. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c., and 10-gallon packages 80c. will be charged.

Glues—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels, $1.65 to $1.75; pure linseed oil, $2.00 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2.00; 100-lb. kegs, 25c. extra.

Plaster Paris—New Brunswick, $2.00 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.00.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

Crude Petroleum—Prices continue unchanged. We quote: Canadian, $1.36; Pennsylvania, $1.61; Ohio, 94c.

FLOOR FINISHES GOOD SELLERS.

Floor finishes have become one of the most marketable lines for the paint dealer to handle. Painted and varnished floors are coming into more general use each year in all classes of homes. The change from carpeted floors is not a matter of taste and fashion alone. Cleanliness and healthfulness and economy have had probably more to do with it than anything else. The dusty, germ-collecting carpet, so hard to keep clean, was doomed to be supplanted as soon as reputable manufacturers began to place floor finishes on the market.

RAILWAYS HAMPER TRADE.

THE Railway Commission sitting in Toronto on Tuesday heard a deputation from the board of trade in connection with the complaints of the Canadian Manufacturers' Association against certain freight rates and regulations. The deputation consisted of Messrs. Peleg Howland, R. C. Steele, Joseph Oliver and Hugh Blain.

"We cannot see why conditions that apply here should not apply beyond Port Arthur," said Mr. Howland, in discussing the question of the restoration of the old rule regarding mixed carloads of freight. "The necessity for greater latitude in mixed carloads beyond Port Arthur is greater than it is here. We contend that the railways should not be arbitrary in applying the owners' risk clause on shipments. The clause should be abolished altogether. The rates are high enough to enable the companies to assume all risk. The effect of the present 'smalls' rate, or rate upon small parcels or boxes, is to make wholesale merchants in one trade the shipping agents of others. The situation has become almost intolerable. If the charges were reduced, and there was better classification, the shipments would be direct, and not bunched, a more satisfactory arrangement for everyone. If there is any charge to customers for detention the railway companies should also pay for delay. There should be a reciprocal arrangement. There should also be a time limit imposed upon railway companies for moving freight between certain points."

"I would like to emphasize that owners' risk clause," said Mr. Blain. "It should be entirely abolished. It gives a reckless trader a chance to do business in ordinary channels upon an advantageous basis because he has secured lower freight rate, because he accepts his goods at his own risk.

Mr. Blain wanted the special damage concessions upon coal, coke and lumber also applied to sugar and beets, but the objection was raised that this was specializing clauses which were intended only to apply to commodities handled all over the country.

Mr. Joseph Oliver gave several instances of delay to shipments due to red tape and procrastination on the part of the railroad companies.

Chairman Killam said that he hoped that when the draft car regulations were finally adopted they would remain undisturbed for several years. Additional arguments will be heard when the board sits in Montreal.

MEETING OF BRANCH MANAGERS.

The second annual convention of the Canadian Rubber Co.'s branch managers was held at the head office, Montreal, from November 29th to December 7th, inclusive. The managers present were: Chas. Holden, Winnipeg; R. E. Jamieson, Vancouver, B.C.; Lloyd L. Libby, Halifax, N.S.; J. C. Nicholson, Toronto; Paul R. Hanson, Montreal.

McClary Self-Basting Roast Pan

RETURNED DEC 21 1905

No Basting, No Waste, and Nothing to Watch But the Clock.

Do you realize what this means to **you**?

It means that no matter what you roast—meat or fowl—all you need do is to put in the roast, with a little water in the bottom of the pan, and take it out when done—crisp, juicy, and roasted to a turn.

The reason why this Roaster roasts so much **better**, and **bastes itself**, is that all the steam which arises and bastes the **bottom** of the roast is made to **drop down** again on the **top** of the roast, because of the special **construction** of the top. (See picture.)

But that is not all.

The **ordinary** Roasting Pan not only requires a lot of basting and watching, but **it also wastes a lot of the roast itself**, as most women know from experience. Actual test shows that a 10 pound piece of roast beef will only weigh 8 pounds, or less, when roasted in the ordinary pan—a clear loss of 2 pounds, or one-fifth of the weight; at this rate you do not need to have "roasts" **very often** before this waste amounts to $3 or $4 a month!

This big item of waste, as well as the necessity of basting and watching, are all **entirely eliminated** in the **McCLARY SELF-BASTING ROAST PAN.**

It takes up no more room, and it can be used on the **top** of the stove as **well** as in the oven.

STOVES AND TINWARE

MORRISBURG'S REEVE DISCUSSES PERSONALITIES

Editor Hardware and Metal: The attention of the council and ratepayers of the village of Morrisburg has been called to an article appearing in Hardware and Metal, dated November 25, signed "Citizen," and purporting to come from the village of Morrisburg. As you say your columns are open for discussing this matter, I will ask you to publish this article together with the resolution passed by the council of the village of Morrisburg on December 4, as follows:

Moved by Geo. Emmett, seconded by W. C. Coir: That the attention of this council has been called to a grossly false article contained in Hardware and Metal of November 25, 1905, signed by "Citizen." That the said article is false from beginning to end, and not a statement or figure contained therein but what is entirely untrue and intended to injure the credit of this municipality, and this council does hereby demand from the said journal the proper name of its author called "Citizen." Carried.

The above resolution is my authority as Reeve of Morrisburg to demand of you the name of the author calling himself "Citizen," which I will expect you to furnish me without delay.

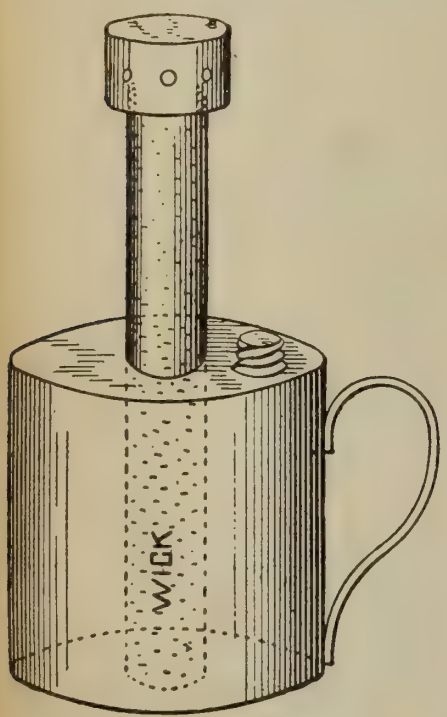
I might say here in the way of contradicting the statements made by "Citizen," that there is probably not another municipality in the province of Ontario in any better financial position than the village of Morrisburg. We own our own electric lighting system and waterworks system, and less than fifty thousand dollars would pay the cash value of every debenture we have outstanding at the present time. Our electric light and waterworks systems are self-sustaining. The revenue obtained from them is more than what is required to meet the annual debentures and pay all running expenses, including wear and tear, and will be a present to the municipality when the last debenture is paid. All this is being accomplished on a revenue of one dollar each for domestic and two dollars each for business lights of 16 c.p., per annum, and water for domestic use of householders for five dollars per year. The above we consider the cheapest and best service in Canada, and the plants are not, as "Citizen" says, taxed to their capacity, nor much more than one-half their capacity. We could sell these two systems any day at from $100,000 to $125,000, if we were to put them on the market, which we have no intention of doing as we are perfectly well satisfied with them as they are. Does this look much like being $80,000 in debt, as "Citizen" says we are? There is no such proposition from the Government as $17,000 for opening up the head of the canal to let in water; the amount $13,000 for cutting the bank has never been heard of before, nor did it appear in the lease sent by the Government to this municipality; as to a definite amount of $30,000, this likewise does not appear anywhere in the proposition; as to the estimate of $46,000, this has evidently been a dream of "Citizen," as no such estimate has been made; as to the $3,500 already expended, this is entirely untrue; there has not been one foot of water mains laid yet; as to the careful estimates placing the cost at $100,000 to $125,000, this is absolutely false and has likely been made by "Citizen" in the same careful false manner as the rest of his statements. The assessed value, according to the last assessment roll of the village of Morrisburg, is $563,750, instead of $500,000. As to what the Government will do for Morrisburg, I must say with all due respect that they have treated us perfectly fair and are still willing to do so; they are not making a single unjust demand from Morrisburg, notwithstanding the desperate effort made by ———, the fifteen who voted against the by-law, to try, if possible, to stop us from getting a lease. As to articles which have appeared in your journal, they have had no effect whatever on the ratepayers of Morrisburg, and if the by-law came up to be voted on again every ratepayer would record his vote as he did before. I do not know of one voter who has changed his opinion. I wish to have it distinctly understood that a selfish motive can be attributed to every vote that was polled against the by-law, every one of them are well known. I will give one for instance in that of Wm. Eager, as his name appears to his article in your journal of the same date as "Citizen" (who is probably just as ashamed of his principles as he is of his name). As to Mr. Eager, he deserves the credit of not being ashamed of his name, but to show you the selfishness of Mr. Eager, it is only a short time ago that he wanted this village to vote him a $10,000 cash bonus to assist him to start what he called a pork factory, presumably in an old out-of-date cold storage he then controlled. Failing in that, he then tried to get this municipality to run an electric line from here to Winchester (17 miles) to furnish his brother with electricity to run a flour mill and electric light plant he was controlling in that place, which was a financial failure and has since come into the hands of a liquidator. Failing in this, he did finally succeed in getting a former council to grant him free water for his use in a little cheese factory, employing one man, and located inside the corporation, an action which should never have been done by any council. Cheese factories are an offensive smelling thing and should not be allowed inside a corporation, much less bonusing them. Mr. Eager served a term on the school board here as trustee, and while holding that position and at one of the trustee meetings he said it would be better for the country if collegiate institutes were all done away with, presumably to keep the poor man poor by keeping him ignorant. This is but a short history of a part of the selfishness of Mr. Eager, and if your other correspondents against our by-law will give their names, I think about the same, and in some cases a worse, state of selfishness can be shown up. Other writing in your journal and other newspapers and journals against the possibility of producing tin plate in Canada is utter nonsense, and is plainly traceable to a selfish interest. It may not be generally known that the wholesale trade of Canada is probably one of the most gigantic monopolies we have in the country. I am creditably informed that on some lines of tin they make as much as two hundred per cent. profit. No wonder these wholesale interests are kicking against tin plate being made in Canada, which would bring the consumers of tin in direct contact with the manufacturers, and do away with those middlemen or wholesale importers. Those men will undoubtedly deny these exorbitant profits, but I appeal to the consumers and workers of tin in Canada not to be led astray by such selfish appeals, but look carefully into the wealth of these wholesale importers and ask yourselves the question, where did these men make their millions of dollars, which some of them are reported to be worth? Why are some of them putting up such a desperate fight against tin plate being made in Canada? They are not obliged to put any cash into the industry. Why do they appear before the Tariff Commission and fight against any duty being put on tin plate? Would it not be better even if the consumer had to pay 15 per cent. than to pay those gigantic monopolists 200 per cent.? Since our Government has wisely undertaken the task of investigating the methods used by these monopolists, it would be well for every consumer of tin in Canada to put forth every effort to bring those criminals of industry to justice, and assist the Commissioners in every way possible to unearth these groundhogs who are boring into the heart and sapping the life-blood out of our Canadian industries and laboring people.

A. A. LOGAN,
Reeve of Morrisburg.
Morrisburg, December 5, 1905.

Mr. Logan's Letter.

In reply to the request that Hardware and Metal furnish the name of "Citizen," Reeve Logan has been informed that this will not be done. The writer is one of the most reputable citizens of Morrisburg and his years of experience in municipal and business life fully quality him to discuss the finances of the town. It is interesting to know also that "Citizen" repeats the figures given in his letter and his statements have been verified by one of the largest property owners and leading public men in Morrisburg.

The discussion of personalities indulged in by Reeve Logan, who is a relative of J. Wesley Allison, does not strengthen his case. Now that the door has been opened for discussion in the Morrisburg papers it is likely that the townspeople will consider the proposition in a more rational manner.



We are informed that the works under construction are at the extreme end of the town and in order to supply the unmentioned number of electric lights and unlimited amount of water offered the company a distance of three-quarters of a mile must be covered. This will entail a large expenditure and the tax rate is not likely to continue at the 22 mills charged in 1904. Of the 200 acres turned over to the promoters only 8 acres are given to the tin plate company, the

remainder being held by the promoters for speculative purposes.

Granted that the promoters are not selling stock in a concern which they never expect to see running, the agreement entered into binds the town far more than the company, but everything is problematical upon the acceptance of certain conditions by the Dominion Government—a most unlikely probability.

GASOLINE TORCH.

POPULAR MECHANICS describes a home-made gasoline torch which contains the essentials of economy and practicability. The description follows: Procure an old tin can, pint size, with a screw top, for holding the gasoline. Punch a hole in the centre of the top and insert a piece of 1-4 inch gas pipe to within 1-8 inch of the bottom of the can, letting the pipe extend out of the can four or five inches, soldering it in position. Screw a common cap

Home-made Gasoline Torch.

on top of the pipe and drill eight or ten holes around the cap. Fill the pipe with wicking or asbestos.

When ready to light the burner, heat the can on the top and hot gas will flow from the holes. When lighted it will burn as steadily and brightly as gas light. This is a handy torch for use around the shop or outside, as it takes a very strong wind to blow it out.

PUSHING FURNACE SALES.

HERE is another form of letter which a western firm use in their heating business. They sell a large percentage of the furnaces and other heating apparatus used in their section, and the following form of mimeograph letter has brought good results:

"Dear Sir,—Are you thinking of putting in a heating plant this season? If so we would like to see you and explain our system of heating. Enclosed find pamphlet of what a few of our patrons say of our method, and as they live in this district some of them may be well known to you. In dealing with us you run absolutely no risk, as we guarantee to heat your entire building, or no payment. Don't condemn warm air heating because someone has an improperly installed furnace, one that will not heat or burns too much fuel, or is dirty, for it is not the fault of the furnace but of the person who put it in, and all of these faults can be remedied; and they would not exist if the furnace was properly installed in the first place. We are installing at this time heating plants for Mrs. L. Johns, Messrs. J. D. Barge, E. L. Priestly and Fred Howell and all of these parties selected warm air after a most thorough investigation of the different methods of heating. We would like an opportunity of figuring with you as we feel certain that after you fully investigated our system of heating we will have no trouble in arranging satisfactory terms for a heating plant. Let us hear from you.

Yours truly,

....."

WESTERN HEATING CONTRACT.

The C.P.R. have recently awarded the contract for heating their new station at Pilot Mound, Man., with a Torrid Zone steel hot air furnace.

Hamelin Bros., of Arcola, Sask., are heating their departmental store with two Torrid Zone furnaces and they are putting one in their store at Reston.

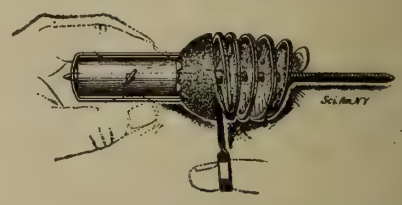
Sales have recently been made of this furnace to the Manitoba Hardware & Lumber Co., who are installing them in their stores at Virden and Reston.

The Souris Coal Mining Co. are installing three of these furnaces in their stores at the mines. They find the furnace well adapted for burning Souris coal as the powerful hot air blast enables any kind of soft coal to be burnt.

HARDWARE TRADE ITEMS.

It was never truer than it is now that the man who goes after the stove business is the one that gets it. Some dealers depend on their personal acquaintance and their generally good trade to sell stoves for them. This will help, but something else is needed. It is push.

In the rush to sell base burners, oil heaters should not be overlooked. They are often used to supplement the heat of the furnace in cold weather in rooms that have not sufficient radiation or that have an unusually cold exposure. Then an oil heater will do for heating a small room in almost any weather. Keep them at the front.



Make arrangements with your neighboring grocer to have a joint demonstration. He can furnish the coffee, pancake flour, etc., while you contribute the range and the fuel. Get some famous local cook to do the work if there is no professional demonstrator at hand. It will help business for both of you.

Keep yourself posted on where to get stove repairs. When a man comes into the store with the remnants of a grate or fireback, he wants a new one right away. If you have to send to two or three places before you get it, you try his temper and perhaps lose his trade.

Advertising stoves is a different proposition from advertising a general hardware line, and principally for this reason: One sale of a stove at the right price will pay for a good sized ad several times over. Therefore, it pays to go into stove advertising more fully. You might make a dozen sales of coffee pots as the result of a five dollar ad, perhaps, but you would not then have your money back. But two sales of stoves on a five dollar ad will give you your money back and an excellent profit besides. See the point?

AN INGENIOUS FRUIT SLICER.

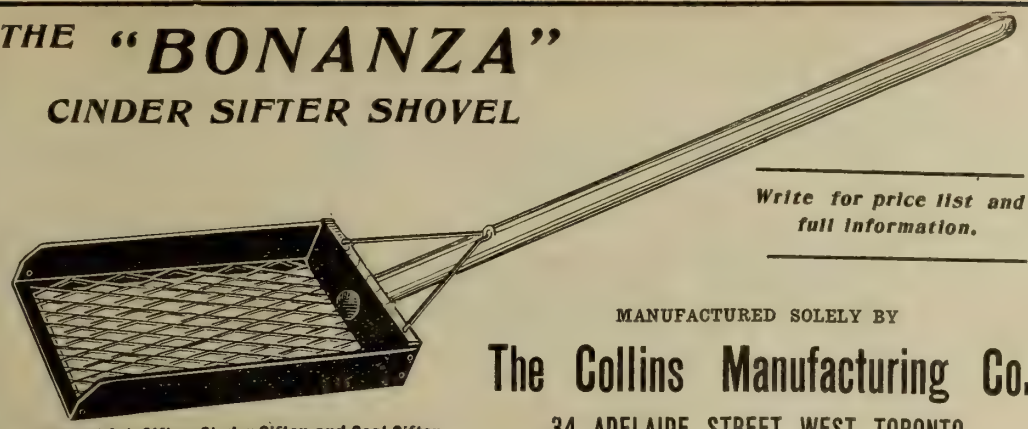
THE accompanying engraving illustrates a rather ingenious device for slicing vegetables or fruit. It comprises a threaded rod or pin on which the vegetable or fruit is impaled, and a knife adapted to be revolved spirally around the rod. The handle which carries the rod is formed with prongs which pierce the end of the fruit and prevent it from turning on the rod while it is being sliced. In addition to the prongs the handle carries a pair of spring arms formed with jaws at their outer ends which assist in holding the fruit during the slicing operation. A nut is threaded onto the rod and carries the knife. In use the device is held as illustrated by dotted lines, and by pressing the finger against the finger piece at the outer end of the knife, the latter is re-

An Ingenious Fruit Slicer.

volved about the rod; but owing to the thread on the nut and rod, the knife is advanced in spiral direction, cutting the fruit into a continuous spiral ribbon. Then, on cutting through the fruit from the circumference to the centre, it will be divided into a number of separate slices, all of a uniform thickness. The rod is adjustably held in the handle so that it can be lengthened or shortened for different sizes of fruit. It may also be replaced by a rod with a different thread for slices of a different thickness.

AN EFFECTIVE ADVERTISEMENT.

One of the most effective advertisements seen lately was a range displayed in the show window of the Miles Hardware Company at Mason City, Ia. The range was a total wreck, not only as to linings and top, but the body was burned clear through so that a kitten could easily crawl into the flue under the oven. On a large placard which hung over the range was the following:



Cost	$27.48
Freight	2.15
Set of new linings	2.50
Total	$32.13

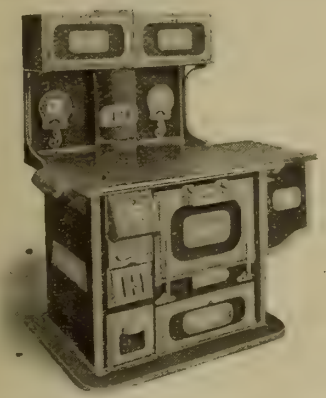
Used 2 years, 4 months.
Did it pay?

On the oven door panel (which was about the only thing left in good preservation) was the name: "Sears, Roebuck & Co."

It is unnecessary to explain that Sears, Roebuck & Co. is a Chicago departmental store.

THE "BONANZA"
CINDER SIFTER SHOVEL

Combined Ash Sifter, Cinder Sifter and Coal Sifter.
(PATENT PENDING.)



Write for price list and full information.

MANUFACTURED SOLELY BY

The Collins Manufacturing Co.

34 ADELAIDE STREET WEST, TORONTO

Also Ash, Coal and Snow Shovel. No dust, no dirt. Ashes sifted right inside furnace pit, and cinders thrown directly back in furnace. Same shovel picks up the ashes and deposits them in ash receptacle. Substantially made of extra heavy 18 gauge expanded metal; will last for years. Universally acknowledged to be the best thing ever made for the purpose. No order too large. Prompt shipment.

"See that Frame that the Oven Door shuts against?"

That's made of malleable iron. One in the back just like it. These are riveted to both the **Polished Steel Body** and the oven, with Norway iron rivets; result, always tight, never give, never break. No other Steel Range on the market has those frames but

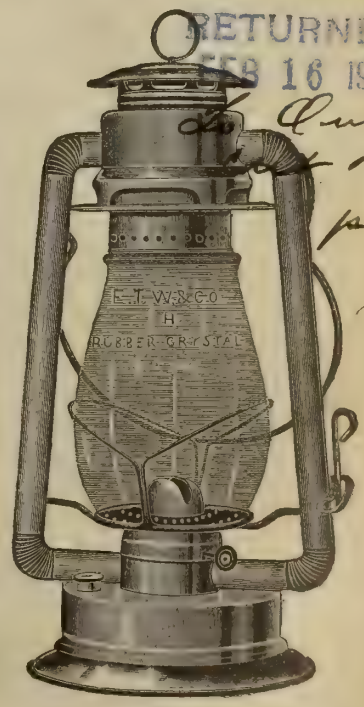
THE JOY MANUFACTURING CO.

32 William Ave., - - TORONTO

New Style Cold Blast Lantern

(Patented)



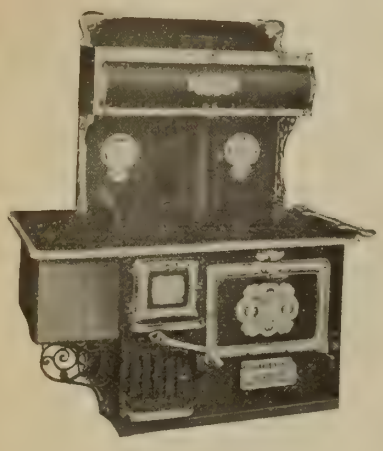
We beg to draw your attention to the cut herewith, which is an improvement of great value. You will notice by the annexed cut of the old style Cold Blast, and by this cut that the difference is in the top. This improvement makes it utterly impossible for the Lantern to be blown out by any ordinary means.

Made with Side Lift as shown in cut, or Bottom Lift.

Plain or Japanned.

Old Style Cold Blast Lantern

This cut shows our old style Cold Blast Lantern, which was and even is now the best Lantern of the Cold Blast. However, we have discontinued the manufacture of this style owing to our latest improved Patent—see cut annexed.



E. T. WRIGHT & CO., - Hamilton, Canada

DURABILITY and EFFICIENCY

must be characteristics of your wares. Buyers may overlook other points. These points they will not overlook.

Does it pay you to handle ordinary wares when the Oxford lines yield as big a margin of profit? Why take risks when you can place the

Oxford Chancellor Range

on your floor with the absolute assurance that it will be an easy seller, a trade winner and a big profit producer.

The body of this range is built of the best quality of rolled steel sheets with an interlining of asbestos mill board throughout.

The oven is very roomy—designed to meet the requirements of a big family. Our patented spring drop door makes a convenient shelf for basting.

The Oxford Chancellor burns hard or soft coal or wood. Fire-box fittings are furnished for either or both, as desired.

Our strong, aggressive advertising has created a big demand for the Oxford Chancellor. The A1 quality of this range as an economic, durable and efficient cooking apparatus is widely recognized.

The demand for the Oxford Chancellor is constantly increasing.

Our terms to the trade are liberal.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritive source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

PREPARATIONS for the electric smelting experiment at Sault Ste. Marie are all but complete, and the electric current will be turned on in about a week. A good deal of delay has been caused by the fact that the apparatus needed is of types hitherto not made on this side of the Atlantic, and consequently has had to be specially manufactured. This has involved all the more delay because of the great amount of work which has kept electric manufacturing establishments very busy.

A new stave mill has been established at Brigden, Ont.

The Brantford Malleable Iron Works are to enlarge their works.

Calgary, Alta., has opened its new municipal electric light plant.

The town of Bracebridge has passed a by-law to spend $14,000 in extending its power plant.

The Nipissing Foundry Co., of North Bay, have installed a dynamo to light their own plant.

A. C. Thompson's iron foundry at Bridgewater, N.S., suffered damage by fire last week estimated at $23,000.

The town of Saskatoon is likely to be incorporated as a city and to install waterworks and electric lighting systems.

American capitalists have been looking for a manufacturing site for an iron industry, which may be established at Cobourg.

Victoria, B.C., is procuring estimates regarding the cost of a power house and machinery capable of generating 1,000 horse power.

The Welland Board of Trade has endorsed the proposition that the town council purchase and operate an electric light plant and sell electric power to manufacturers.

A new nail works is to be established at St. John by Mr. Even Perkins, recently manager of the Maritime Nail Works, now controlled by the Capewell Horse Nail Co.

The Peacock File Co. have definitely decided to locate in Welland. The company have $5,000 worth of machinery at Buffalo which they desire to bring into Canada free of duty.

Many mineral discoveries have been made in the Lake St. John district in Northern Quebec. Gold, copper, asbestos and nickel have all been discovered in considerable quantities, and a United States steel corporation has acquired several properties which they intend to develop later on.

Several industrial concerns are negotiating with the town of Fort William regarding establishing factories at that place. Amongst these are a wagon manufacturing company, a cast iron pipe foundry, a nail mill, large iron works for manufacture of bar and rod iron and a rolling mill for rails.

The Dominion Iron & Steel Company will add two Bessemer converters to their plant so as to increase their steel output sufficiently to meet demand for rails. This means an increase of 35 to 50 per cent. in the company's present output of steel, and it is expected the monthly output will be 20,000 tons next year.

The Collingwood Shipbuilding Co. has closed contract for the construction of two steel steamers. The contract price for the two is about $400,000. One is to be built for James Playfair, Midland, being 486 feet in length and having a carrying capacity of 323,000 bushels of wheat. The other is for the Montreal Transportation Co., it being for a barge 206 feet in length. About 700 men will be employed building the boats.

Toronto capitalists have acquired the Brantford Street Railway, the Grand Valley Railway between Paris and Brantford, and the Woodstock, Thames Valley & Ingersoll Railway running between Woodstock and Ingersoll. Among those interested in the purchase are A. J. Pattison, W. S. Dinnick and John Firstbrook. Some of the stock will still be retained by people in Brantford. The roads will be greatly improved and the lines extended.

Reports from various parts of the country indicate a serious shortage of steam coal. There is also said to be a shortage of fuel at the upper lake ports and navigation may be somewhat handicapped in the Spring in prospect.

The Wolverine Reed Co., manufacturers of rattan chairs, has closed its factory at Detroit and under the name of the Imperial Rattan Co. will manufacture at Walkerville after the new year. About eighty persons will be employed.

Coal shipments to the St. Lawrence from Cape Breton this year are the largest on record, 1,121,008 tons having been shipped by the Dominion Coal Company alone from Sydney. A few years ago the entire Cape Breton output was little more than this. It is expected that the Dominion Coal Company's output for the year will amount to well over three million tons, while the output from the other mines will bring the Cape Breton total up to 4,000,000.

It is understood that the Grand Trunk has let the contract for the equipment of the Port Huron-Sarnia tunnel with electric power for the operation of trains. The contract involves the building of large power houses in Port Huron and Sarnia, and the total cost is said to be nearly $700,000. The third rail system and powerful electric locomotives will be used. The adoption of electricity will remove all danger from gas in the tunnel. The company has been working on plans for this improvement for three years.

Companies Incorporated.

The surrender of the charter of the W. G. Nott Bicycle Co., of Brantford, has been accepted.

Manitoba Peat Co., of Winnipeg, has been authorized to manufacture, sell and deal in peat and all kinds of fuel.

Rhodes Metallic Packing Co., Toronto, share capital $40,000, purpose to deal in engineers' supplies. The directors are: J. M. Rhodes, J. S. Dawson and R. L. McAfee, all of Toronto.

St. Mary's Hardware, St. Mary's, share capital $40,000, purpose to carry on a wholesale and retail hardware business. Directors: J. W. Peart, W. H. Bartlett and N. Mulloy, all of St. Mary's.

The Stephenson Belting Co., Toronto, share capital $40,000, purpose to deal in machinery, etc. The directors are: J. E. Stephenson, W. Stephenson, B. G. Stephenson, W. Gillespie and Mary Stephenson, all of Toronto.

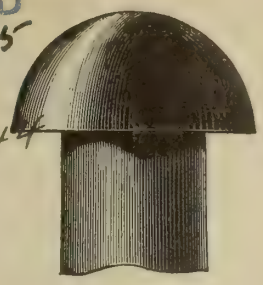
Majestic Polishes, Toronto, share capital $40,000, purpose to manufacture, buy and sell oils, varnishes, paints, etc. The directors are: C. G. Armstrong, J. Hawken, D. R. Roy, T. H. Wilson and G. R. Brady, all of Toronto.

Western Machine Co., Toronto, share capital $40,000, purpose to deal in all kinds of machinery. The directors to be: G. McLachlan, B. Thompson and W. T. Folliott, all of Toronto.

Toronto-Cobalt Mining, Toronto, share capital $300,000. purpose to carry on the operations of a mining, milling and development company. The directors are: H. B. Wills, W. Vandusen and J. S. Humberstone, all of Toronto.

Sovereign Cobalt Mining Co., Toronto. share capital $200,000, purpose to carry on the operations of a mining, milling and development company. The directors are: P. M. Horrocks, W. A. Smiley and F. J. Stanley, all of Toronto.

Petrolia Gas Co., Petrolia, share capital $40,000, purpose to manufacture and sell artificial and natural gas for all purposes. Directors: W. C. Noxon, E. Noxon and C. Swabey, of Toronto, and J. W. McCutcheon and B. McCutcheon, of Petrolia.



Schaake Machine Works, New Westminster, B.C., share capital $1,000,000, purpose to do general machine construction work. The directors are: Alex. Ewan, Henry Schaake, Dr. A. J. Holmes, Nels Nelson, and E. J. Fader, of New Westminster.

Canadian Forty-Mile Dredging Co., Toronto, share capital $600,000, purpose to build, acquire, own, charter, navigate and use steam and other vessels. The incorporators are: J. S. Lowell, W. Bain, R. Gowans, E. W. McNeil, S. G. Crowell, W. F. Ralph, all of Toronto.

Imperial Electric Motor Co., Toronto, share capital $200,000, purpose to manufacture, sell, lease and dispose of power machinery and automobiles, etc. The directors are: A. Dods, R. McKay, G. Grant, Winnifred F. McIntosh, Agnes Elliott, A. E. Lyon and A. L. Bitzer, all of Toronto.

Stinson-Reeb Builders' Supply Co., Montreal, share capital $20,000, purpose to manufacture and deal in cement, lime, brick, stone, etc. The incorporators are: J. K. Stinson, F. J. Curran, and E. H. Stinson, of Montreal, J. A. Reeb, Port Colborne, and H. W. Macoomb, of Welland.

PEDLAR PEOPLE FOR WINNIPEG.

THE Pedlar People, of Oshawa, realizing the great possibilities of expansion of trade in our Canadian northwest, have decided, after serious consideration of all existing conditions, to erect an extensive factory for the manufacture of their different lines of sheet metal and fire-proof building materials, in the city of Winnipeg.

It is their intention to separate the different classes of their product, so that each branch of manufacture will be carried on in different buildings. The shingles, sidings, and ceilings, will be manufactured in a two-storey building 200 feet long by 80 feet wide. Their cornice and fire-proof window factory will be a four-storey building 40 feet by 200 feet. The lath and fire-proof studs, furrings, etc., will be manufactured in a two-storey building 40 feet by 200 feet. The galvanizing, tinning and pickling plant will occupy a structure 60 feet square, while the painting will be done in a building 40 feet by 80 feet, and three storeys high. The offices, storehouses, and shipping room, will be "L" shaped, and, over all, 40 feet wide by 400 feet long, to a height of three storeys.

It is the present intention of this company to erect this factory as soon as the weather will permit. The buildings will be of fire-proof construction, the company employing only goods of their own manufacture, and cinder concrete. Their galvanizing department, painting and pattern room, will be absolutely fire-proof. The outlay will be in the neighborhood of $150,000.

MONTREAL BUILDERS' BANQUET.

THE Montreal Builders' Exchange had a right good time at the banquet held last week, the success of which was largely due to the efforts of President N. T. Gagnon and Vice-President E. M. Roberts. The feature of the evening was a most cleverly prepared menu card, entitled "Specifications," which read as follows:

Foundations—Oysters, Malpecques on the half-shell. To be bedded on an undisturbed stomach.

Grouting—Soup. Consomme a la Princesse. To be well mixed in proper proportion, and ladled into position.

Coursing—Fish. British Columbia salmon, pommes Rachel. To be of a rich portage entry color.

Bond Timbers — Cutlets of Sweetbreads a la Victoria.

Joisting—Bread and butter rolls. To be laid on bond timbers and properly bridged, and to be covered diagonally with butter (nut), knots less than 1½ inch allowed. Hair joints will not be required in this flooring.

Joints—Roast young turkey. Properly trussed and braced and strapped at angles with ½ inch by 3 inch cranberry sauce straps.

Ribs of beef au jus. To be laid up and neatly pointed with horse-radish, with not more than six joints in 12 ins.

Note—Carving to be executed by experienced workmen, and to detail.

Plastering—Mashed potatoes. Best 3-coat work, corners to be neatly rounded.

Roofing — Material to be haunch of venison, made secure with good roofing composition of red current jelly. Watercress. To be rendered weatherproof by a thorough application of best mastic(ation).

Trim—Unless where otherwise specified, to be clear pine, spoon cleaned, and principal rooms to be for enamel finish (Harlequin ice cream) a nice cream.

Hearths—To be of assorted cakes and wafers, with a border of bon-bons and chocolates.

Hardware—Except bolts (nuts and raisins) to be supplied by proprietor, but put in place by contractor.

Decorations—The dining room to be frescoed with apples, oranges and bananas.

Glazing—To be best cut glass lemon (ade) color. Any glass of other than this color brought on the job will be entirely at contractor's risk.

Tiling—To be best brown glazed Spanish (T and Coffee) make of tiles, finishing at ridge with tooth pick ridge-roll to special detail.

Note—This work must be strictly carried out according to details, which will be supplied by architect, after the completion of work.

BUILDING NOTES

A new House of Refuge is to be built at Belleville.

A new $45,000 school is to be erected at Brantford.

L. B. Woods is to erect a $2,000 residence at Edmonton.

Crowe & Wilson, Vancouver, B.C., intend to erect a $30,000 business block.

The Brantford Carriage Co. intend to build an addition to their office building.

J. P. Howe, Seattle, is said to intend to build a new theatre at Vancouver, B.C.

The Revelstoke Saw Mill Co. is erecting a large mill at Big Bay, on the Columbia River.

The Bell Telephone Co. has purchased a site in Brantford, and will erect a telephone building.

The Grand Trunk Railway Company will erect a tourist hotel in the Algonquin National Park.

An American wholesale firm has purchased a site in Hamilton, and intends to erect a large warehouse.

Permits have been issued for 47 new buildings to be erected in Toronto. The total cost is to be $219,200.

Robert Ward & Co., Vancouver, B.C., are having plans prepared for an eight-storey fire-proof office building.

The new Process Building to be erected by the Industrial Exhibition Board in Toronto will cost about $100,000.

The contract has been awarded for the new fisheries building at New Westminster. The contract price is $14,000.

Tenders are being called for by the school board of Killarney, Man., for the erection of a solid brick school at that place.

Goderich is being asked to grant assistance to aid in the rebuilding of a large elevator recently destroyed by fire in that town.

It has been decided that the new St. Boniface Cathedral at Winnipeg will be commenced in the Spring. The cost will be about $250,000.

THE FIRST TRIALS CONCLUDED

LAST Saturday saw the close of the series of trials before Judge Clute, sensational addresses being delivered by judge and lawyers before sentence of the court was passed upon the defendant associations and individuals. As forecasted in last week's Hardware and Metal Judge Clute found the accused guilty of conspiring together to restrain trade and imposed heavy fines as penalties. Elsewhere the list of fines is given.

* * *

Sentence having been passed, it may be safe to comment briefly upon the trial and the facts brought out during its continuance. It has been clearly established that certain methods of procedure adopted by the various sections of the plumbing trade have been outside the pale of the law, the chief of these being the I.O.U. system. It would also appear that while a jobber may rightly refuse to sell goods to a customer whose credit is bad it is wrong for an association of supply men to agree that they shall sell goods only to certain customers, charging all others a higher figure. But the trial brought out another fact and one which in many respects overshadows the points referred to—the fact that the master plumbers and supply men were advised that their actions were legal—barring the I.O.U. system—and the lawyers who gave this advice must bear their share of the ill-repute resulting from the trial. In the face of the mass of condemnation meted out to the plumbers by the daily press it is refreshing to note the following sane statement made by the Mail and Empire of December 11 :

"The decision against the Toronto plumbers and the Supply Association, and the heavy fines imposed, leave everybody wondering how it came about that any lawyers advised that the combination was within the law. Such advice is alleged to have been given. If lawyers advise a course that is wrong, or fail to warn against such a course when consulted, what wonder is there that laymen may get into conflict with "the statute in that case made and provided" ?

* * *

In the opinion of many outsiders the case for the master plumbers was handled much more satisfactorily than that of the supply men. The former finding that the court was a hostile one and realizing that a verdict of guilty was practically certain, adopted "jollying" tactics and while bringing out all the evidence possible kept the court and prosecuting counsel in the best of humor. On the other hand the counsel for the supply men did not encourage his clients to go into the witness box and in many ways came into conflict with the judge and opposing counsel. Judge Clute was most severe during the trial and in his closing address, reproduced in this issue, made some exceedingly harsh statements which seem hardly to be justified by the facts brought out. His imputation of dishonest evidence given by Secretary Morris. of the Supply Association, also caused much unfavorable comment.

* * *

The evidence having been concluded Mr. Riddell, for the Master Plumbers' Association, said he would not call any witnesses. He argued that that body had not done any wrong. The system of tendering meant nothing more than a means whereby some reasonable profit on the cash outlay could be obtained. As to the bonus system, it was perfectly clear that it was opposed to the methods of the association and sixty per cent. of the members knew nothing about it. Mr. Riddell went on to argue that there was no proof of conspiracy in regard to several points.

"If conspiracy is proved between the defendants, it is not necessary to show that each little detail was known to every member of the association," observed Mr. Justice Clute.

FINES IMPOSED UPON PLUMBERS.

Central Supply Association, Limited	$5,000
Master Plumbers' and Steamfitters' Co-operative Association, Limited	5,000
William Mansell	500
Fred. Armstrong	300
J. H. Wilson	250
Joseph J. McKittrick	250
Robert W. Harrison	250
George H. Cooper	250
Robert Ross	300
Patrick Joseph Hayes—suspended sentence.	
Total	$12,100

The agreement between the master plumbers and the union, Mr. Riddell explained as due to the well known power of labor organizations and the need of employers to remain on good terms with their workmen.

"If there was anything wrong with that agreement with Labor Union 46, then it certainly will not be acted upon for one hour," continued Mr. Riddell. "We are desirous of knowing our exact legal position."

The combination of his clients he held to be quite legal ; it would be for the court to decide whether the means used to accomplish their ends were illegal. Mr. Riddell intimated that he had advised his clients that the bonuses were illegal and should be paid back.

* * *

Speaking in defence of the supply men Mr. Watson made an interesting address full of legal points. "There is no evidence before this court to prove that the final agreement between the two defendants was in force," said Mr. Watson. "It is fortunate that in this case there are written records of the policy and course pursued by the defendant corporation, and so we are not totally dependent on oral testimony. More than that, it is shown that such an agreement is contrary to the by-laws of the association. Mr. Morris states clearly and emphatically that the basis of the corporation was no agreement should be made. It is also proved that this policy has been preserved."

"Mr. Watson may as well come to the gist of this at once," said Justice Clute. "What is the meaning of this 7½ per cent. in this last agreement, if not to evade that ? The Master Plumbers' Association was anxious to prevent the Supply Association dealing with anyone not a member of their association. Your association was anxious to get their patronage at as cheap a price as possible, and the result was the agreement of September, 1905."

"I would like to come at this in the regular course of my argument," said Mr. Watson. "Following on that resolution of September, 1905, the master plumbers were informed of the cancellation of the agreement and the determination of the supply men to sell to any master plumber. This is contained in the documentary evidence submitted at this trial. We find after that the same course was pursued. We find that the complaint against the Canada Brass Company of not selling to all was investigated thoroughly by the secretary. There is not a tittle of evidence after July 25, of any refusal."

"I think there is," said Justice Clute.

"There was evidence of a complaint," said the counsel, "but no evidence of discrimination. In fact, the statement of the secretary shows that the agreement was not in force."

"I did not fancy Mr. Morris' statement when he said this agreement was not in force owing to the understanding that it should stand until there was a settlement in the Crashley case which was before the courts. I think that statement was an afterthought," said Justice Clute. "Mr. Morris appeared to give his evidence in the earlier part of the trial frankly, but when he was recalled I didn't like it."

* * *

Crown Prosecutor DuVernet maintained that the evidence of the Crown was conclusive. "I submit it proves a clear, flagrant violation of the act. After their organization was perfected they grew bolder and certain classes of men were unable to buy goods in this province with which to conduct their business.

"The plumbers undertook to do things which were utterly illegal. Look at the oath of obligation which all took on becoming members. It is aping the oath taken in the courts of justice. The sole object of the combination was disregarding the public interests and the law. It was not until the Minister of Customs had threatened to take off the protection that they allowed the public to

have the advantage of a few cents, and they kept the dollars to themselves. It just took a bar or two down to the public. They took advantage of the tariff to crush out competition. There was no such thing as an honest tender.

"They absolutely hoodwinked and defrauded the public; they were not content with 20 and 25 per cent. gain; they must get 26½ and an additional 5 per cent. They had the dishonest percentage paid into the supply houses distributed by these honest individuals who sat around a table and divided other people's money without the slightest compunction. There was not such a thing as honest competition. When a man was called for tenders, large sums of money were put on to be divided among the tenderers. Mr. Riddell, for the master plumbers, freely admits that such a proceeding was disreputable, and says he has advised the money to be paid back.

"Every person had to pay these commissions, bonuses, rake-offs, or whatever they are called. Even in the case of the Government $2,000 was added for the association. The entry was made in the book and the secretary made an attempt to get it. The combination was a splendidly organized attempt to extort unreasonable, unfair and dishonest prices from the public. When a Hamilton man tendered in Toronto, he had to pay 15 per cent. to his association for tendering so much lower than the Toronto plumbers. In addition to that, he had supplies cut off, a punishment that could not be worse, preventing a man as it did from earning his living at the trade at which he had been working all his life.

"In the records of Toroto we find that man after man was driven out of business. Out of all the tenders during the past two years only one honest one was submitted, and that was the one on E. & S. Currie's. Think of the tremendous difference in that one case, nearly $6,000. Is that an honest difference? I don't think it could be.

"What was the result of having this absolute wall around Toronto? What was the result of this breaking down of competition? The supply men began to grumble. It was found out by the public that they would have to pay double for any building that they wished to erect, and so they did not erect it. As a result the call on supplies began to decrease. It was absolute tyranny. Thorne, who took a man into partnership, was expelled from the association. Reeves, when he went out, wrote them that they were corruptionists and little better than a band of pirates. So they were, too, cutting their own and the public's throat. Threats were made to call Reeves' men out and have his supplies stopped unless he went back. It was no idle bluff, and the men left and the supplies were cut off.

"I ask your lordship to find that the agreement entered into by the two defendants in November, 1902, continued up to the present time. The changes were a mere matter of form, not of substance. The same common design runs all the way through. If the defendants were guilty in the early part of this year they are just as guilty now. The last directory, published in July, has never been withdrawn. The agreement was never cancelled. The statement that the agreement we have does not go into force until the Crashley case is disposed of is a mere evasion of the law."

Mr. DuVernet spoke nearly seven hours, concluding on Saturday morning by stating that he thought the court had only been given a slight glimpse of the evils which were carried on in the association. Their own counsel had not known of the rake-off system, which he condemned, till Mr. Joseph Harrison told of it in the box. The members might be able to disclose more but they took an oath to stand by the association when joining it. This might have landed them in penitentiary, for such an oath was absolutely illegal and against the law of the land, especially when taken under those circumstances.

The rule of the association which gave a member the right to claim a customer after working for him for two years formed another unreasonable and vicious clause. By it younger and more vigorous plumbers were restricted and it placed a customer at the mercy of anyone who had done his work. No matter how badly a plumber treated a customer that man was forced to employ him.

There were the fines and penalties which created the funds of the association. The more one dwelt on the case the more wonderful appeared the methods for getting percentages. The one thing plumbers were never fined for was charging too much.

The tyranny of the master plumbers' attitude towards the members of the Supply Association was remarkable. The wholesale men gave degrading exhibitions of humiliation, coming before the association board to offer apologies for selling some little article to an outsider.

Mr. DuVernet turned his attention to the Central Supply Association, Limited. He contended that it was exactly the same organization which was formed in 1901, under the name Plumbers' Supply Association, and later assumed the other designation.

The contention of the Crown was that the supply men had assisted the objects of the other association by refusing to sell to outsiders. The evidence showed that men had been turned away up to six weeks ago. They had even gone one better than the master plumbers, and not only prevented a man getting goods but threatened him with criminal action when he managed to do so.

* * *

Crown Attorney Curry discussed the connection between the tariff and the difficulty of some plumbers in getting supplies. He sketched the development of trade organization amongst the supply men and said that in 1903 an agreement was reached whereby no goods were to be supplied to parties outside the trade. At the same time there was an understanding between the master plumbers and the journeymen's union. "According to this the master plumbers would employ union men, while the union men would work only for the master plumbers. Thus the three parties tried to impose on the others, but all imposed on the public."

* * *

"I find that the evidence has been proven for conspiracy under Section 520 of the Criminal Code," said Judge Clute when Crown Attorney Curry had concluded his address. "I find the defendants guilty of the offence charged. As the matter may come to appeal, as there is a special provision for appeal in this case, it may be desirable that I should mention some of the grounds that led me to the conclusion.

"A preliminary objection was taken by Mr. Watson that there could not be conspiracy between two incorporated companies, and that this particular case was not contemplated under the section 520. I entirely disagree with that. I have to take the view on that count that such an interpretation would destroy the intention of the Act and be contrary to its clear meaning. In the Interpretation Act the word 'persons' is defined to include, amongst others, 'bodies corporate.' That is the clear intention of the legislation.

"With regard to Mr. Watson's other objections, I find first that there may be conspiracy between two corporate bodies. But it is said that under the section the companies could not be bound by any acts or circumstances previous to its incorporation, and that the Central Supply Association of Canada, Limited, not having been incorporated until September 7, 1905, all that was evidenced prior to that could have no bearing on the charge, and that nothing appears since its incorporation which would amount to a trade combination within the Act. I do not take that view.

"I think the evidence clearly establishes that there has been a criminal combination within the meaning of the Act since at least the year 1902, and that the defendants, the present companies who are the successors to that criminal agreement and combination, have adopted it, have become responsible for it, and by their engagements have undertaken to carry out the engagements of the association which previously existed, and that applies also to the incorporated Master Plumbers' and Steamfitters' Co-operative Association, Limited."

In order to understand the objects of the two associations, and how they carried them out, Judge Clute followed the history of the organizations and referred to their taking over the funds of the previous ones and undertaking to carry out their agreements. The judge then sketched the incidents leading up to the agreement giving to members of the plumbers' association an advantage over non-members by allowing them a preference with the supply firms.

Speaking of the "bonus" system his lordship said: "One hardly knows how to express one's self in reference to the disclosures such as we have had in regard to this matter. A number of hitherto reputable men meet around a table, and under the pretence of sending in invited tenders, deliberately adopt a method by which, without apparently the slightest compunction, they took from that portion of the public who happened to be interested, money to which they had no possible claim, no more claim than any person meeting another upon the street and by force robbing him of what he had. Indeed, I think that offence rather the least offensive. Here they adopt a system of misrepresentation and fraud in order to induce persons inviting tenders to believe that the tenders were reasonable and fair, when for at least two or three years it was admitted that not one single honest tender had come from this association."

Justice Clute concluded his judgment as follows: "I think there can be no doubt that the object of these two associations was one and the same. It was to do the very thing that the statute was intended to prevent, and that the

effect of this combination was to unduly limit the supply or dealing in articles or commodities mentioned, and that it did restrain and hinder trade and commerce in relation to such articles and commodities as they were manufacturers of or sold, and that it did in fact unduly prevent and lessen the manufacture and production of such articles, and that it unreasonably enhanced prices. I, therefore, find defendants guilty and impose the penalty of $10,000, $5,000 to be paid by each association."

* * *

James McKittrick, J. H. Wilson, Frederick Armstrong and Wm. Mansell, of the Master Plumbers' Association, were then placed on trial on the indictment charging them with conspiracy with Wm. Bush, Jas. Richards, Peter McCann, Al. McBain and John Priestly of the local union No. 46. Mr. Riddell, K.C., counsel for the accused, in view of the decision just given, withdrew the plea of "not guilty." and entered a plea of guilty. At the same time he pointed out that his clients did not want to have any agreements that was not legal. As they had been advised that the agreement with the plumbers' union was legal, he asked that his lordship rule wherein it was illegal.

Justice Clute did not comply with the request, but accepted the plea of guilty and recorded a conviction.

Mr. Riddell also stated that he had advised that in every case in which the association became acquainted that I. O. U.'s had been given, the amount which had been added to the contract price should be paid back to the person upon whose contract it had been added, and that advice he understood was being followed. In all matters the defendants submitted themselves to the judgment of the court.

Judge Clute then passed sentence upon the accused, the fines being adjusted largely upon the ability to pay of the person fined.

* * *

Patrick Joseph Hayes, Robert William Harrison, George Henry Cooper and Robert Ross were next called upon to stand up for sentence, having pleaded guilty to the charge of conspiracy as original incorporators of the Master Plumbers' Association. They were also fined upon the same basis as those named in the first indictment, with the exception of Mr. Hayes, who, for reasons which the judge did not announce, was not fined but given his liberty on suspended sentence.

The Crashley case was not gone on with, being traversed to the January Assizes in spite of an objection made that as the accused was only an employe of a supply house, the case against him should be dismissed.

* * *

Although the members of the Master Plumbers' Association who signed the agreement with the Journeymen Plumbers' Union have been convicted of conspiracy because of that agreement, no indictment has yet been preferred against the representatives of the local union, who carried on the negotiations which culminated in the signing of the agreement. It is quite within the range of probability that in the next proceedings taken these gentlemen will be included as defendants.

* * *

The Master Plumbers' Association lost no time in paying the $5,000 fine imposed upon them, but the Central Supply Association are understood to be considering the question of appealing the case. This action is unlikely, however.

* * *

On Tuesday the various cases yet undecided came up in the police court, but as the bulk of the documentary evidence was at Osgoode Hall an adjournment was made until December 19, when the charges against the 150 or 160 master plumbers, the charges of fraud against the firms who gave "I.O.U.'s" on contracts, the charges against the individual supply men for conspiracy and the charges against Mr. James Hardy in reference to the hardware associations will come up for hearing. This week is, therefore, an off week when the plumbers are allowed to earn some money to buy Christmas presents or to pay off their fines, as "I.O.U.'s" or York Loan shares will not be accepted as collateral by the courts.

The investigation adjourned at Hamilton last week is also expected to be taken up again next week.

THE BACTERIAL PURIFICATION OF SEWAGE

By Albert Glyndon in "Scientific American."

IT is only about twenty years since the first experiments in bacteriological sewage purification were made. Schloesing and Muntz in France, Warrington and Frankland in England, and the Massachusetts State Board of Health were the pioneers of the movement. The necessity for sewage purification is distinctly a modern one. It has grown out of the development of the water carriage system. In olden times many and fearful were the diseases due to the bad sanitation of streets and houses. Now, however, architects and engineers have solved that old problem, and by means of the water carriage sewerage systems, they are able to have the poisonous wastes safely conveyed away from human habitation. Nevertheless, the problem of the ultimate disposal of sewage has not yet been thoroughly solved. Man has sought to deal with the subject by building sewers to the nearest stream, and thereby removing the nuisance as far as he is concerned. But in doing this he has only transferred it in a degree to some other community, and has established the modern evil of stream pollution. It is hardly necessary for me to dwell upon the results of this evil. It is sufficient to point out that it contaminates the natural water supply of the towns, kills fish, makes rivers unpleasant for boating and bathing, renders the water practically useless, and aids in the spreading of typhoid fever.

Depositing Sewage in Rivers.

It would be foolish to make laws against the passing of sewage into streams if there were no better ways of disposing of it. Modern science, however, has come to the rescue. Filters have been invented and put into operation which have the power to convert the most foul and turbid sewage into clear, sparkling water, and which enable men to pass harmless effluents into the rivers.

The modern method of filtration is not a mechanical nor a chemical one; these systems have been tried, but have failed to dispose of the large quantities of impurities in solution. It is a system of breaking up animal and vegetable matter into their harmless constituent parts by means of the action of bacteria which inhabit the sewage. It is really a process of combustion or oxidation, that is to say, the converting of organic substances into inorganic. The same kind of action is seen frequently in nature. It takes place in conversion of foliage into dried-up dead leaves and in all processes of decay. The bacterial sewage treatment system is simply the adaptation of this method of nature to the requirements of man.

Rapid Growth of Bacteria.

Before one can understand how it is possible for such purification to be accomplished, two things must be realized. The first is the enormous force of bacteria present. The second is the insignificant bulk in sewage that requires purification. As many as 115,000,000 bacteria have been counted in one gramme (1-28 ounce) of soil from a trench along which sewage had been running. They multiply with extraordinary rapidity and, were there no forces to interfere, one bacterium would have sixteen and a half million descendants in twenty-four hours. Ordinary sewage, on the other hand, only contains one part in a thousand of dead organic matter; 998 parts are pure water and one part harmless mineral matter.

The simplest example of bacterial sewage disposal is the throwing of a pan of dish water over the ground. The liquid becomes finely divided in passing through the air, and reaches the ground in fine particles. Here the bits of grease, soap, and food refuse remain on the surface, where they are slowly oxidized by the aerobic bacteria. The liquid passes on through the earth, and is attacked by millions of micro-organisms, which search each drop for food. After a time the liquid becomes practically pure, and the retained solids have disappeared, passing off as carbonic acid, water, nitrogen, or oxides of nitrogen.

Many are the varieties of systems devised for the disposal of sewage. The patent offices of both England and the United States have been flooded with new inventions for sewage treatment. Many have proved utterly worthless, but there are several which have been operated with entire satisfaction.

I will not attempt in this article to go into details of each different method of sewage disposal, but I will give a brief description of the most important systems now in use.

The oldest of all forms of bacterial sewage disposal is known as land treatment, broad irrigation, or sewage farming. It was understood for a long time that land had the power of purifying sewage without its being known exactly what took place. Accordingly, sewage was passed over land for the purpose of purification, and at the same time was used for the fertilization of crops. This system has been in operation in many

We make Electric Fixtures, Sockets, and Cut-Outs

Munderloh & Co

Electrical Supplies of all kinds. MONTREAL.

parts of England, but it can hardly be looked upon as a practical method. In some cases, however, most successful results have been obtained by land treatment, but such cases are very rare. Financially, this system can never be a success. The area of land required to purify a comparatively small volume of sewage is enormous, the expenses of operating are considerable, the land is liable to receive so much more liquid than the ordinary rainfall that it becomes "sewage sick," and useless either for purification or for raising crops. It is rapidly becoming an out-of-date method except, perhaps, for finally disposing of sewage works effluents, or in isolated cases where topographical and other conditions are specially favorable to its adoption. Land treatment is used successfully at Berlin, Germany, on a tract of land of over 19,000 acres—larger than the city itself. It is kept in condition by convict labor. In one instance, a year of exceptional drought, the crops from these farms realized receipts which more than defrayed all cost of administration and maintenance. Land treatment on the whole, however, is haphazard, uncertain, and expensive.

Septic Tanks Successful.

In 1895 Donald Cameron, of Exeter, England, brought the septic tank into prominence. This consists of a large tank in which sewage is allowed to remain, where it is acted upon by anaerobic bacteria—micro-organisms that live without the presence of air. Sewage contains a considerable portion of solid matter in suspension. By means of anaerobic action part of it becomes liquified and goes into solution, part rises to the top as scum, while part descends to the bottom as sludge. The inlet and outlet of the tank are placed below the surface, so that the sewage may pass quietly through with as little commotion as possible. The scum which rises to the top becomes oxidized after a time, and passes off into the air as harmless gas. A certain amount of decomposition takes place in the sludge at the bottom. When the tanks are large, sludge accumulates very slowly at the bottom. At a septic tank at Mansfield, Ohio, only a few inches of deposit were drawn off after it had been in use for a year and a half.

The septic tank has proved a most useful factor in sewage purification. It is used extensively as preliminary treatment for contact beds and percolating filters. It cannot, however, be considered by itself as a system of purification; it can be used successfully only as part of one.

There are some small towns, however, where septic tanks alone have been used. The results in these places have invariably been very poor. The septic tank by itself is regarded by sanitarians as little better than an apology for a sewage disposal plant. In some cases, however, when only a low degree of purification is needed, such as when sewage is put into the ocean, septic tanks have proved useful.

Contact Beds Practical.

Perhaps the most practical method of sewage disposal is the combination of the septic tank and the contact bed. The contact bed system was devised by W. J. Dibdin, who installed the famous bed at the town of Sutton, England. In this system sewage is first passed through a screen, to prevent the floating particles from blocking the interstices of the bed. It is then passed over a coarse-grained bacteria bed. This consists of a tank three feet deep filled with broken stone, coke, burnt ballast, or other suitable material not more than three inches in diameter. It is supplied with under-drains, so that it can be easily emptied. The sewage is allowed to enter the bed until the level of the filtering material is reached. The inlet is then closed, and the sewage is allowed to remain standing "in contact" for a certain length of time. During this period the aerobic bacteria do their work. They oxidize the organic matter in solution, and in their search for food they decompose a considerable portion of the impurities. Furthermore, certain ferments known as enzymes aid in the work of decomposition, while the solid particles adhere to the filtering material. The sewage is then allowed to flow slowly out of the bed, leaving many impurities upon the filter material. It flows into another similar bed, where further similar action takes place. Now that the bed is empty, aerobic action goes on among the particles of sewage left in the interstices of the material. Before the next flush comes, most of the spongy matter in the bed has been converted into gases. When the bed fills again, the gas is driven out of the bed into the air above.

Such is the method in use at Sutton. It is simple and effective, and has been widely used in systems laid out more recently. After the sewage has been treated in a septic tank, it generally need only be treated in one contact bed to secure the necessary purification.

Most septic tank-contact bed systems contain several bacteria beds, so that while one bed is filling, another may be in contact, another emptying, and another resting empty. Four is a favorite number of beds for a small town plant, while six are often used.

The contact bed system involves only a small fall, so that it can be applied to almost any district. It has been in successful operation in many towns both in this country and in England. The secret of its success is the regularity of the time of contact and aeration. Experience has shown that unless such regularity is maintained the bacteria will not remain in healthy condition.

At Manchester, England, is the largest septic tank-contact bed system in the world. The beds are opened and closed at regular intervals by hand. In the more recent contact bed systems installed in this country, the invention of automatic airlock apparatus has made it possible to have the beds fill and empty at regular intervals automatically.

A more recently devised system of filtration, and one that is gaining favor in England, is known as intermittent downward filtration, percolating, or trickling filters. These filters are many feet in depth. The sewage is distributed in intermittent doses—often by means of a large revolving sprinkler. They are filled with material similar to that used in contact beds. At the bottom there is an open space for the circulation of air.

In order that percolating filters work successfully, great care must be taken in their construction. It is essential that air should always be present in all parts of the filter, scum must not be allowed to accumulate; there must be a thorough draining at the base, so that the filtrate may come from the filter easily and force air to come in by induction. During the fall of the sewage through the bed, the aerobic bacteria get a splendid opportunity to oxidize organic matter, provided they have a sufficient supply of air. The effectiveness of a percolating filter increases with its depth, so that the filters are made as deep as possible. They are generally used with septic tanks. This system is in use at Birmingham and Hanley, England, but it has practically never been applied in this country. The objections to its use are first the great fall required, and secondly the danger of stoppage through frost unless artificial heat is used. At an experimental plant at Leeds a purification of over 80 per cent. was secured in three minutes by this method.

Filtration in New England.

The method of intermittent downward filtration is largely used in New England. It is, however, merely an adaptation of the old system of land treatment. It consists of passing sewage over soil intermittently, so that the land after receiving one charge of sewage is allowed to rest for a certain space of time before receiving the next. Underneath are generally placed under-drains so that the effluent can easily escape. Although areas averaging as much as

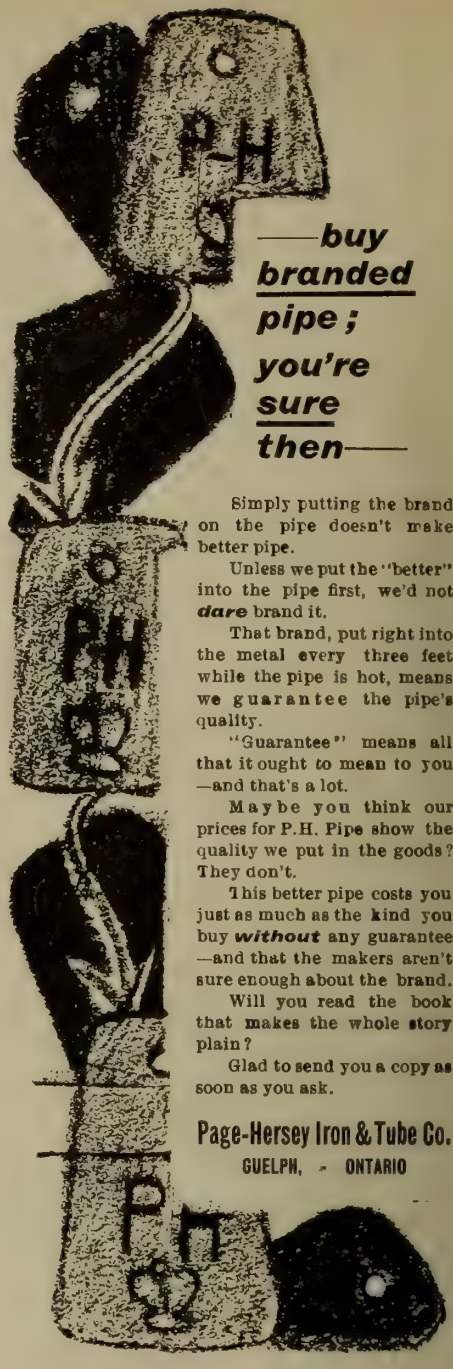
from ten to twenty acres per million gallons are necessary for these beds, the results obtained have been satisfactory. It is frequently necessary to pump the sewage to the filters. The best-known examples of intermittent downward filtration through sand are those at Brockton and Framingham, Mass. In both cases pumping stations are required. This system has one or two drawbacks besides its expense. Unless great care is taken, the sewage goes through the filters in channels instead of percolating through the material, while the beds frequently freeze and become useless in Winter.



There is no doubt that the bacterial process of sewage treatment has come to stay. The question raised is no longer shall the bacterial system be used, but which kind of bacterial system best complies with the given conditions. All the methods I have described work successfully under the proper conditions, but the contact bed system has proved the most generally applicable because of the small fall required and its ability to operate in all weather.

THE ART OF HOUSE LIGHTING.

THE proper lighting of a house is almost as much of an art as its proper decoration; indeed the two are closely associated and one cannot be perfectly accomplished without the other being taken into account. In olden times when artificial light was costly and secured by crude methods, its merits were measured chiefly, almost entirely, by the intensity of the illumination produced; a well-lighted house was one that was bright, a poorly-lighted house was one that was not.

With the wonderful lighting inventions perfected and introduced within the limits of the last century—gas, kerosene, electricity, acetylene, gasoline, and the like—all this has been changed, and the character of the light is regarded as quite as important as its intensity. Lights are provided with reference to the delicate structure of the eye, lights that will possess the requisite power without dazzling. This effect is produced by the employment of shades which are considered with a view to producing artistic effects as well as properly illuminating a room. In this respect the character of the light, itself, must be critically studied with reference to the exact effect that is desired to be produced.

In lighting a house much also depends upon the location of lights with reference to openings in the various rooms, the location of the furniture, the draperies and decorations. A fortune may be spent in artistically decorating a house and half the good effects lost through improper or inartistic lighting. While this applies with greatest force to costly residences, it still affects the humbler home. In planning houses architects should give close attention to the problem of lighting, from this standpoint, a thing that is too frequently left to the judgment of inexperienced or incompetent persons. Art is invading the field of the builder and the question of proper and artistic lighting is destined to receive more attention in the future than has been bestowed upon it in the past.—Architect and Builder.

—buy branded pipe; you're sure then—

Simply putting the brand on the pipe doesn't make better pipe.

Unless we put the "better" into the pipe first, we'd not ***dare*** brand it.

That brand, put right into the metal every three feet while the pipe is hot, means we **guarantee** the pipe's quality.

"Guarantee" means all that it ought to mean to you —and that's a lot.

Maybe you think our prices for P.H. Pipe show the quality we put in the goods? They don't.

This better pipe costs you just as much as the kind you buy ***without*** any guarantee —and that the makers aren't sure enough about the brand.

Will you read the book that makes the whole story plain?

Glad to send you a copy as soon as you ask.

BRIDGEPORT, CONN.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, December 15, 1905.

A RISE in the price of lead pipe is the only change of the week in the price of plumbing supplies here. This was to be expected, however, after the remarkable career of pig lead, and, consequently, no surprise has been felt. The discount has been changed to 20 per cent. from 25.

The business transacted during the present week has been most gratifying to the local jobbers, who declare that each day's mail shows orders quite up to the standard of several weeks ago, which is a most unusual condition at this time of the year. In fact, the slack season seems to be getting shorter every year, and it is expected that it will be even shorter than usual this Winter.

Range Boilers—The demand is keeping up well at the same prices as have prevailed for some time. We quote: Iron clad, 30 gallon, $6.00, and 40 gallon, $7.50 net; copper, 30 gallon, $22.00; 35 gallon, $24.00; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—As we predicted last week discounts have been withdrawn and higher prices substituted. Our prices now are as follows: Discounts twenty-five per cent f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—There is still a scarcity evident on the market here. We give the following prices: Discounts on all sizes of nipples up to 6 inch, 67 1-2 to 70 per cent.

Iron Pipe—Special sizes are hard to get, even though the situation has been somewhat relieved since our last report. We are quoting as follows: Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $5.50 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.: 1-2 inch, 71 1-2 per cent.; 3-4 inch, and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15,000; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 71 per cent., and for galvanized 61 per cent.

Soil Pipe and Fittings— Orders are still quite numerous and the turnover is more than satisfactory for the season. We quote as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent off.

Solder—Although both lead and tin are stronger again this week, we still quote for solder: Bar solder, half-and-half, guaranteed, 22c.; No. 2 (wiping solder), 18c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Decmeber 15, 1905.

LEAD pipe has made its expected advance, being now quoted at 20 per cent. instead of the former 25 per cent. discount. The steadily increasing prices of lead made it apparent that higher figures would be quoted so that the trade were well advised of the change which has been made.

Business is falling off, but still the amount of orders being booked is abnormal for this season. Owing to heavy shipments of enameled goods to the west, there has been a shortage of this class of supplies, but this is being relieved considerably. Other lines continue as reported last week.

Lead Pipe—The expected advance has been made, but the jump upward is larger than looked for. Trade is active. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 20 per cent.

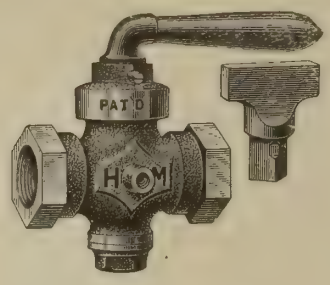
Soil Pipe and Fittings—Buying is very active with prices very firm. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe—Quotations continue as before. Business is lively and the market is strong. We quote the following prices: Black, 1-4 inch, $2.09; 3-8, $2.09; 1-2 inch, $2.42; 3-4 inch, $3.04; 1 inch, $4.37; 1 1-4 inch, $5.96; 1 1-2 inch, $7.15; 2 inch, $9.54; 2 1-2 inch, $15.00; 3 inch, $19.35; galvanized, 1-4 inch, $2.91; 3-8 inch, $2.91; 1-2 inch, $3.29; 3-4 inch, $4.19; 1 inch, $6.02; 1 1-4 inch, $8.21; 1 1-2 inch, $9.85; 2 inch, $13.14; 2 1-2 inch, $21.45; 3 inch, $28.05.

Iron Pipe Fittings—Trade is quite active owing to the heavy demand for heating supplies. We quote: Cast iron, elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hookplates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Galvanized Iron Range Boilers—Prices have dropped on some sizes. Buying is quite active, however. We quote as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11.00; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29: extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

Solder—Business is active. Prices are very firm. We quote: Bar solder, half-and-half, guaranteed, 21 1-2c. and wiping at 20c.



Enameled Ware—Shortages are being relieved owing to western shipments having been completed. We quote: Baths, rolled rim, 5 feet, 2 1-2 inch rim, first quality, $18.65; special, $16.65; 3 inch rim, first quality, $19.15; special, $18.15; 5 1-2 feet, 2 1-2 inch rim, first quality, $20.15; special, $18.15; 3 inch rim, first quality, $21.65; special, $19.65. Lavatories, discounts, first quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, first quality, $2.55; special, $2.40.

ANTIQUITY OF PLUMBERS.

IN the museum at Arles, in the south of France, which was a Roman colony, is a piece of lead pipe, exactly like the seamed lead pipe which, as met with in old houses to be altered, is within the experience of architects of the present day, who have been practising for not more than twenty years. The pipe is said to have been taken from a Roman aqueduct, and bears the evidence of its genuineness in a trade mark, stamped on the pipe, which, as copied into the writer's sketch book, reads Scantius × Poihinus × Fac. Scantius Poihinus makr. How near that trade mark seems to bring the pipe to modern times, and reminds us that the citizen of the Roman Empire, except that he did not wear trousers and his science was not sound, was a very modern person, and Rome in those days not unlike New York. Among other points of resemblance, which bring it nearer to our own days than to those of Shakespeare, there was the distribution of heat, it is said, but certainly water in the villas of her millionaires; and, if we may trust the evidence of the museum at Arles, the distribution of water was done by means of lead pipe—put in by a plumber.

MUELLER GROUND KEY WORK

No. 49 Stop and Waste Cock.

A stop cock may show no defects under a hurried test, and yet develop a slow leak when put into use.

Mueller Stop Cocks are tested not only for flaws that are easy to find, but are kept under hydraulic pressure long enough to detect any leak of a slow nature. They never have to be watched when put into service.

Mueller Stop Cocks are made in solid handle, socket head and patent cap patterns and in all pipe connection styles. The cock illustrated is the patent cap pattern, iron pipe style.

Each cock is given a 200-pound hydraulic pressure test as near like actual service use as possible, bears the Mueller trade mark and is *unconditionally guaranteed.*

We also make fuller work and compression work for plumbers' use. Catalogs upon application.

Talk to the Builder

You don't have to be a gold digger to get money out of a hole in the ground. Get acquainted with the man who is taking out that foundation—talk the

OXFORD HEATING SYSTEM

to him, point out its immense superiority, as only a practical man can, and it is about certain you will get the contract to heat that new building.

The Oxford ("B" series) Boiler is in a class by itself. One feature of the Boiler is the overhang of the upper walls of the fire-pot. It is a proven fact that this construction adds greatly to the heating power of the boiler by increasing the surfaces against which the heat impinges. Combine this with our double-sized first water section with bell-shaped flues, and you have the maximum of efficiency with the lowest possible fuel consumption.

The Oxford is not only scientifically and economically perfect as a heating apparatus, it is also the most durable boiler ever built. We avoid the use of gaskets or washers by making all connections with our Oxford Steel Push Nipples, thereby assuring an indestructible iron-to-iron joint.

Oxford Hot Water and Steam Radiators are built of cast iron—they don't rust and can't leak. Used with Oxford Boilers, they make a splendid, durable and economic heating system, the sort that gives absolute satisfaction and builds up a dealer's reputation.

Send for the Gurney Oxford Book of Hot Water and Steam Heating Apparatus.

WE also manufacture Cast Iron Ranges, Steel Plate Ranges, Gas Stoves, Gas Ranges and Heaters, Hotel Ranges and all kinds of Cooking and Heating Apparatus, Plumbers' Supplies.

CURRENT MARKET QUOTATIONS.

Dec. 15, 1905.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

THERE IS NO FEATURE

In the sale of an article that inspires the dealer to recommend, and induces the customer to buy, equal to the merit of the article itself. As one knows a true friend from long acquaintance and association, so it is that stock in trade that has stood the test of time is recognized as something safe to invest in.

CHURCH'S

ALABASTINE

Is a PERMANENT and SANITARY WALL-COATING, that hardens with age. Has been on the Canadian market and made in Canada for more than twenty years. Is extensively sold and persistently advertised. Sells without effort and affords a good margin of profit. The country is full of cheap kalsomines, foreign made; but what does it profit a dealer to sell them and lose his reputation for dealing in only first-class articles?

ALABASTINE is NOT A KALSOMINE. We make **JELLSTONE, which is a Kalsomine**, and in point of merit as such has no competitor, If you **must have a temporary coating**, stock **JELLSTONE** which is Canadian-made goods. **ALABASTINE** satisfies the customer, and a satisfied customer is a splendid advertiser. **PUSH ALABASTINE.**

Look up your **ALABASTINE** stock. Do it this fall. Order now, from jobber or manufacturer. Spring dating.

THE ALABASTINE CO., Limited, - - Paris, Ont.

THE BEST EFFORTS

of skilled workmen are to be seen in the

METALLIC ASH-SIFTER

and the best results are to be had from this sifter. A hardwareman with an eye to sales, of course selects the **METALLIC ASH-SIFTER** in preference to any so-called metallic sifter or unreliable wooden sifter. He doesn't want stock that depreciates, or about which there is always complaint. The **METALLIC ASH-SIFTER** suits every time. Have you a supply?

Business Getters for Tinsmiths

Are there any defective chimneys in your locality?

Then it is your chance to get business.

— THE —

ZEPHYR Ventilator

saves the expense of building a high chimney.

It is so constructed as to guarantee a perfect draft, and, therefore, easy combustion.

By using the ZEPHYR, it is possible to burn soft coal with the best results.

The smoke is easily drawn off, enabling an even heat to be generated.

THE ZEPHYR IS STRONGLY PUT UP AND WILL RESIST ANY STORM

This is what others think of it:

Montreal, June, 1901.

Messrs. J. W. HARRIS Co. Lt'd.

Dear Sirs,

We have been using two (2) of your "AEOLIAN" Ventilators for the past three years and would say that they have given entire satisfaction and are certainly all that you claim for them.

Yours respectfully, WARDEN KING & SON.

We manufacture and guarantee:

The Harris Filter. The Zephyr Ventilator.
The Aeolian Ventilator. Expansion Conductor Pipe.

THE MacLEAN PUBLISHING CO., Limited

Montreal Toronto Winnipeg

ABOUT GOOD SAD IRONS

You have sold the old style Irons for years.

The handles break.

Customers are dissatisfied, and they remember it against the dealer who sold them.

Next time they are buying Irons they go elsewhere.

Then it's time to look for Something Good.

THE OLD TROUBLE

The New C.L.C. Special Irons

are sold at a reasonable price. They have a new style handle, which is indestructible, with a straight cold wood grip, so bolted together that it cannot come apart. The spring in this handle never loosens.

C.L.C. IRONS HOLD THEIR HEAT, and are handsomely nickel-plated.

Three assorted Irons in a set; six sets in a case.

Sell the C.L.C. SPECIAL IRONS

and secure the Sad Iron Trade. Your Customers will appreciate them.

Before buying Sad Irons, write for a sample set.

SOLD ONLY BY

WHAT IT DOES

(Continued)

MAXIMUM LIGHT GLASS

placed in as Ceiling Lights in any building gives a uniform white light in every corner. Applied to Lean-to Skylight it is effective in long rooms where it would almost seem impossible to have anything but darkness.

No other daylight-increasing system can perform thus except in the "patch-light" way.

Maximum Light Glass is successful in "operation" because it is successful in "make." The difference between it and "other" systems is the difference between the **ability to perform** and the **attempt to perform.**

If you are interested—and you should be—you will send for Booklet and samples of the Glass.

ANNUAL MEETING N. W. C. T. ASSOCIATION.

A Record Attendance.

WITH a membership of 1,843 and a surplus in the treasury of almost $100,000, the Northwest Commercial Travelers' Association is undoubtedly in a flourishing condition. The favorable showing reflects great

D. J. Dyson, President N.W.C.T. Association.

credit on the management of the association in recent years and the careful husbanding of resources by the astute and watchful treasurer who for ten years has been the custodian of the strong box. With the resources on hand the association are now planning to extend the field of their activities and as a result of the discussion at the annual meeting in Winnipeg on Saturday, December 16, it seems likely that the long discussed project of building a commercial travelers' club will be pushed to conclusion.

Officers Elected.

On Saturday, November 25, officers were nominated at a general meeting of the association held for the purpose in the board room of the Winnipeg Grain Exchange building. The president and treasurer were elected by acclamation, but as a result of the nominations there was a keen contest for the vice-presidency and for positions on the board of directors. Ballots were mailed to all the association members and a fairly heavy vote was polled. The elections resulted as follows :

President—D. J. Dyson (acclamation).
Vice-president—J. E. McRobie.
Treasurer—L. C. MacIntyre (accl.).
Directors—John Horne (retiring president), A. S. Lock, F. H. Nesbitt, Geo. Wilson, Thos. Montgomery, F. M. Morgan, W. C. McLean, G. F. Bryan, F. W. Drewry.

British Columbia officers and directors :

Vice-president for Vancouver — E. F. Gerster.
Vice-president for Victoria — W. W. Duncan (accl.).
Directors for Vancouver—C. P. Egan, F. A. Richardson.
Director for Victoria—J. C. Devlin (accl.).
Director for New Westminster — Fred Lynch (accl.).
Director for Kootenay—Geo. Nunn (accl.).

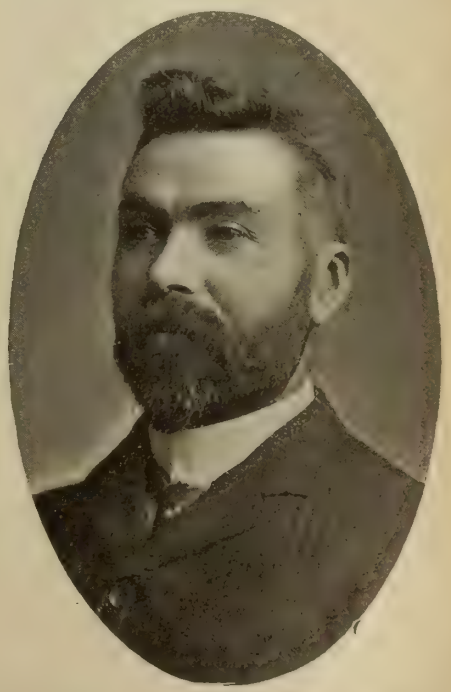
President Dyson.

In their newly elected president the active Northwest travelers have a man who is one of themselves. The duties of the office are such that it is absolutely necessary to elect as president a man who is not an active traveler. It is desirable, however, that he should be a

J. E. McRobie, Vice-President N.W.C.T. Association.

man who is closely in touch with the boys on the road.

Mr. Dyson complies with these requirements. As head of the Dyson Co. his business duties keep him in Winnipeg most of the time, but it is only some eighteen months or more since he was an active traveler, and hence he is in touch with the sentiments of the man who carries the sample grip and has not had time to forget his point of view. Mr. Dyson is justly popular among the travelers for his frank, straightforward character and his kindliness of disposition. The travelers have the utmost confidence in him and they know that the affairs of the association are in safe hands.



Mr. Dyson came west in 1891, severing his connection then with Gorman, Dyson & Co., of London—now Gorman, Eckert & Co. He founded in Winnipeg the Dyson-Gibson Co., which is now known as the Dyson Co. In building up his present extensive pickle and spice trade Mr. Dyson has traveled the territory from Winnipeg to the coast many times and many retailers will be glad to learn in these columns of the honor conferred upon him.

Vice-President McRobie.

Vice-President J. E. McRobie is an active traveler whose good qualities have made him popular in all parts of the west. He is at present secretary-treasurer of the Western Retail Hardware and Stove Dealers' Association and in that capacity spends most of his time on the road . For a number of years he represented the James Robertson Co., Limited, in the west. He was a faithful member of the board of directors last year and there is no doubt that in him the association will have a capable vice-president. His election is very popular among the boys.

Treasurer MacIntyre.

For ten years L. C. MacIntyre has been custodian of the association funds and he has been again elected by acclamation for his eleventh term. Ten years ago, as he mentioned in the course of a speech at the annual meeting, the membership was only 369 ; it is now 1,843. Mr. MacIntyre has therefore seen the association make great strides

John Horne, Retiring President N.W.C.T. Association.

during his term of office. His re-election by acclamation is sufficient testimony of the high esteem in which he is held by his fellow members.

Among themselves commercial men are plain speakers and their criticisms are frank. The only criticism of Mr. MacIntyre's administration has been that he is over zealous in his protection of association funds, and surely that criticism is about the highest compliment that could be paid to a treasurer. Even his failings seem to "lean to virtue's side."

Mr. MacIntyre came to Winnipeg from Victoria county, Ontario, in 1882. For 10 years he was a traveler for Turner, McKeand & Co., wholesale grocers, of Winnipeg, and for the last 13 years he has been manager of the Paulin-Cham-

President's Report.

The president's report, which was adopted unanimously, showed a very satisfactory condition of affairs.

The total membership is now 1,843, showing an increase for the year of 16 per cent., being a total of 293 new members. The membership is apportioned as follows: Winnipeg, active, 1,429; Winnipeg, honorary, 30; life members, 2; British Columbia, active, 382.

The directors have held fifteen meetings during the year, with an average attendance of eight members.

The association has to mourn the loss of ten members, namely: Messrs. C. Jacobs, J. E. Code, W. W. Hicks, J. A. Webber, W. C. Hourston, W. T. Johnstone, S. C. Burton, J. M. Laver, K. P. Wollaston, and R. J. Whitla. The total claims on the mortuary fund this year amount to $1,450, some $600 less than last year.

The British Columbia branch of the association cootinues to flourish and increase in members, the total this year being 382 as against 306 in 1904.

The association's liability under the mortuary benefit by-law now amounts to $350,420, an increase for the year of $63,795.

A branch has now been opened for the issue of certificates in Calgary, with Mr. Chas. J. Packham as assistant secretary in charge. Any members of the association making their headquarters in Alberta will apply to Calgary office for certificate for 1906.

The board have this year made two grants to hospitals, namely: $250 to furnish a ward in the new Vancouver hospital; this is at the urgent request of the British Columbia members, this ward to be always at the service of commercial travelers. At the Winnipeg General Hospital the ward which was equipped by the association some years ago was found in need of new furniture, etc., and was therefore refurnished throughout at a cost of $218.

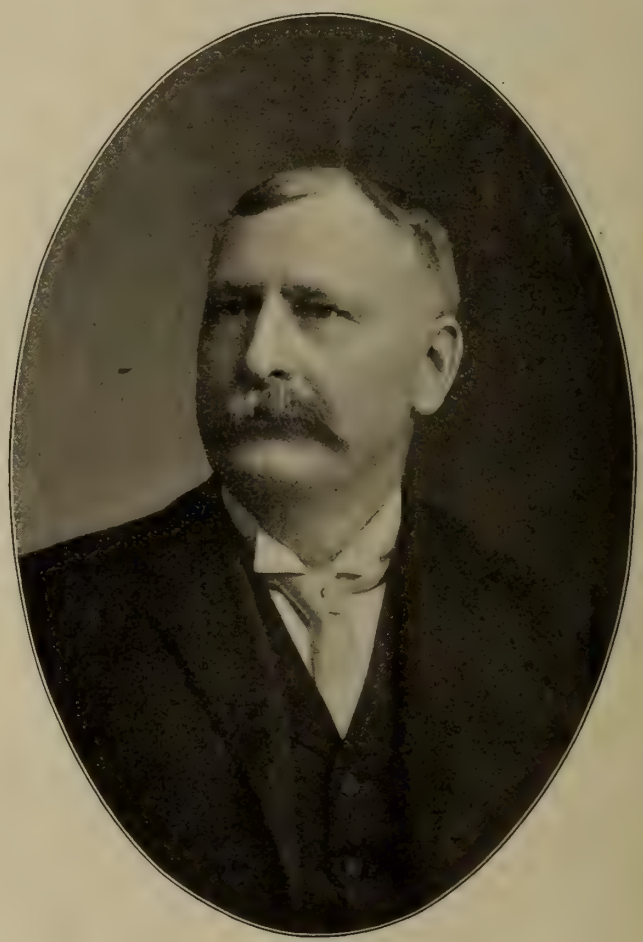
The board have made every effort in conjunction with the other associations, boards of trade, and other representative bodies to have disallowed by the Dominion Government the obnoxious tax on travelers recently put in force both in British Columbia and Quebec, so far without avail.

At the invitation of the Eastern Canadian Passenger Association the board authorized the president and secretary to attend a meeting in Montreal of the presidents and secretaries of all the associations of commercial travelers in Canada and the Eastern Canadian Passenger Association, to discuss the present method of granting rebates by the issuing of certificates by each association. The railway companies have for some time been desirous of securing greater uniformity and no duplication of numbers, and suggested that all certificates should be supplied by the passenger association to each commercial travelers' association in consecutive numbers and absolutely uniform. This proposition did not commend itself to the delegates, as in the first place it would be likely to cause the several associations to lose their identity, and being, secondly, likely to cause some complication in connection with the association insurance. There are many other points of importance which should be considered before definite action is taken. The delegates therefore asked that action be deferred until next year, and it was so decided, and there will be another meeting of delegates called early in the new year by the secretary of the Eastern Passenger Association, of which all delegates will have thirty days' notice.

The delegates were unanimous in condemning the travelers' tax, and passed a resolution in Montreal which was forwarded to the Dominion Government, copies being sent to the premier and other ministers.

The accident and disease insurance of $1,000 on each member has again been renewed with the Ocean Accident and Guarantee Corporation, tenders having been taken and theirs being the most advantageous.

In conclusion, the association is congratulated on its splendid showing this year, and there is no doubt that it will continue to grow and prosper under the management of the new board.



(Signed) FRED. J. C. COX,
Secretary.
JOHN HORNE,
President.

In Flourishing Conditions.

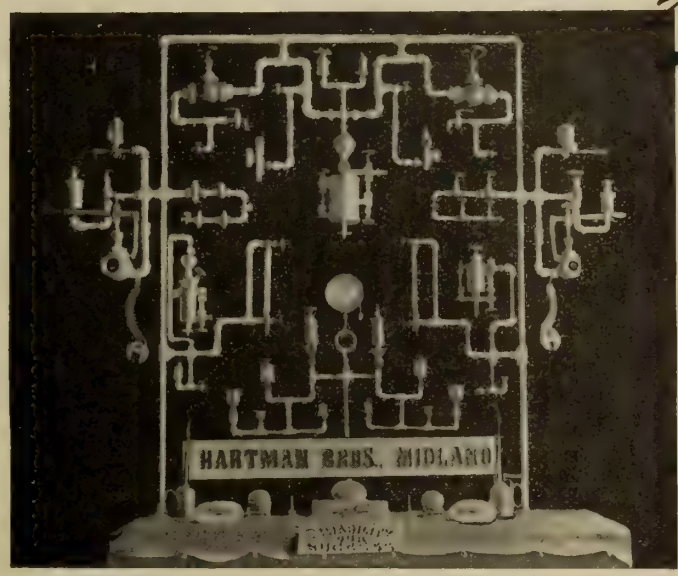
Mr. MacIntyre's report showed the finances of the association to be in a flourishing condition. Owing to the sale of the Lombard street property the assets increased during the year by $35,421.51. The normal increase was more than $3,000 larger than in any previous year. The net surplus is $97,709.73.

Club Room Proposal.

At the general meeting in November a committee was appointed to inquire into the practicability of renting recrea-

L. C. MacIntyre, Treasurer N.W.C.T.

tion or club rooms in Winnipeg for the members. A. L. Johnson, chairman of the committee, presented a report showing the cost of rental of two or three suites of rooms in Winnipeg. The members thought the rental excessive and after long discussion it was decided, on motion of L. C. MacIntyre and A. S. Lock, to authorize the executive to purchase a lot and proceed to build a club house.



Glace Bay's new $30,000 electric lighting plant was put into operation last week. When the old plant was established four years ago 400 lights were in use. Now there are 6,000, and this is expected to increase to 10,000 in two years. The population of Glace Bay is about 15,000.

Displaying Plumbing and Steamfitters' Goods

SOME plumbers are content with little or no display, relying either upon their ability to talk or on the value of the work executed by them in the community in which they live. Others, however, take special interest in preparing an attractive showroom, displaying new features and keeping their establishment up-to-date in all particulars. One way to bring to the public notice new fixtures and to demonstrate the application of old ones, is to set closets, basins, tubs, etc., both under water pressure and with sewer connections. This allows the prospective purchaser to see the working of all fixtures in a much better way than if water pressure and sewer connection were not at hand. It is also a good idea to rough in the entire plumbing for a bathroom, leaving the floor open so that the soil pipe may be inspected, showing how the lead bends are connected up, and in all respects to bring to the view of prospective customers the actual working and uses of various fixtures, traps, back vents, air chambers, etc. This affords the plumber an opportunity to explain at some length the superiority of his work over that of others, to show why back vents are used, and in a general way to bring out the mechanical features of a plan. A wrinkle which is sure to bring trade is to inclose a small room, about the size of an ordinary bathroom, have it nicely papered with a varnish paper and set up the fixtures in the way they would be used in the room. This affords an opportunity to display to advantage various nickel plated fixtures, such as towel racks, clothes hooks, soap boxes, etc., used in bathrooms, and which are a profitable line for the plumber to carry. This method of displaying fixtures has the advantage of showing off the goods in their true size; goods on the floor being apt to be dwarfed by the large dimensions of the room, and the size of the other goods near them. If space is available and business warrants, two or three bathrooms should be fitted up with different priced fixtures to explain quickly and forcibly to customers how certain priced goods will look when installed in their homes. Another feature which has been found to be of advantage is to have neat photographs of important pieces of work either kept in a book in the office or framed to hang on the walls, showing customers different arrangements, expensive fixtures and general conditions in up-to-date houses, regarding plumbing fixtures. A plumber in a small Pennsylvania town, says a traveling salesman in the Metal Worker, has a neat showroom, and the expense connected with fitting it up was not more than is ordinarily incurred by plumbers. The first space of 15 feet was devoted to the display of tubs and other fixtures, which were arranged tastefully so that people could walk around all sides of them and view the fittings. On the walls, which were free from shelves, were arranged either photographs of the buildings or architects' wash drawings where this firm had installed the plumbing work. The rear of the room, instead of having the usual rough counter with showcase on top, found in so many stores, had neat glass show counters about 12 feet in length, of the same kind as those ordinarily used by cigar dealers and which cost very little more than the ordinary wooden counter with glass showcase on top. In these were placed nickel plated fittings of all kinds, which not only displayed themselves to the best advantage but were kept free from dust. Back of these counters were desks for the proprietors and the bookkeeper, and still further back in the room was a door leading into the shop. The shop, however, had an entrance to the street through another part of the building, so that workmen never came through the showroom. This is very desirable, as careless workmen often rub up against a prospective customer with a piece of soil pipe.

NOVEL METHOD OF DISPLAY.

HARTLAND BROS., Midland, have a novel and effective method of displaying stationary and marine engineers' supplies, as is shown in the accompanying illustration. On a nickel plated brass pipe frame they have executed a well-balanced and fancy design exhibiting much ingenuity and excellent workmanship in assembling the numerous parts contained in the display. They state that this is one of their most popular selling lines, and the exhibit has proved a good advertisement to their business. The following articles were used in the design: Oil cans, oil cups, grease cups, S. F. oil cups, cylinder lubricators, auto S. F., lubricators, steam whistles, steam gauges, water gauges, pet cocks and cylinder cocks, inspirators and injectors; globe, angle, and check valves; peet valves and gate valves, steam cocks, relief valves and throttle valves, brass fittings, including tees, Ls, unions, nipples, crosses, bushing and plug; also full line engine packing and engineers' tools.

Novel Display of Engineers' Supplies.

KEEP THE WINDOWS CLEAN.

The old problem of keeping the windows free from frost is now a live one. Many methods that have been devised from time to time are well known to the trade, but there are some trimmers who do not take advantage of them. If the windows are well ventilated they will not coat with moisture, or become covered with frost nearly so much as unventilated windows. One of the simplest and quickest methods of removing ice from windows is to place common coarse salt on a dry cloth and rub the frost. You will be surprised to see how rapidly the frost is removed, and the glass will not coat again for a day or two, even in very cold weather.

A properly dressed window is a valuable advertising asset; not only is it a forceful advertisement, but it is invariably taken as an indication of the store and the stock.

Ernst Stevens, Cradley Heath, Eng.

GET AFTER FARMERS' TRADE.

THE days of January slackness are not far away, now, but the aggressive hardwaremen will not be content to sit on a stool with his feet on the stove and a pipe in his mouth waiting for somebody to come in and buy a pound of nails. No, he will rather begin right now to plan for work during that slack month which will increase his business in the future.

What class of trade pays you best? Unless you are doing business in the heart of a large city, the answer must, almost of necessity, be that it is the farmers' trade which you most value. And, as you cannot get too much good business to suit you, your endeavors should be along the line of developing the farmers' trade. And, in doing this, do not forget to estimate carefully the value of the personal element in business. A prominent retailer to whom the writer was speaking, not long since, declared that he attributed his success to the personal interest he always took in his customers. He makes it a point to be in the store throughout the business hours of the day. He personally attends to the wants of as many customers as possible and, even when his clerks are waiting upon them, he takes the trouble to greet them with a cheerful "Good day." That man began business in a small Quebec village. He moved into Montreal and opened up on a little side street, but soon found it advisable to change to his present quarters on one of the busiest retail streets in the city.

Taking a lesson from the experience of this hardwareman, see that you throw yourself heartily into a January campaign among the farmers of your vicinity. If you have a horse (and there are few hardware dealers who have not) drive around among them making friendly calls on those you know, and getting acquainted with those who are strangers to you. In this way you will greatly interest them in your business, perhaps without even mentioning it. And a few things you hear incidentally will be of immense value to you. Is your host going to build a new barn? Get after his order for builders' hardwares. Does his wife need a new kitchen range? That is your chance. Perhaps, too, he has been thinking of buying a cream separator, and you ought to be loaded up on the points of the line you carry so as to set things going your way.

These are but a few hints of the good that can be done by well-timed personal calls. An aggressive, but, at the same time persuasive man, will gain many new customers and get a firmer hold on old ones by adopting this plan.

TORONTO'S ADVERTISING SCHEME.

TORONTONIANS are awakening to the commercial possibilities of their city. This is good. But what is better, they are discussing practical advertising methods, and a few days ago a conference was held under the auspices of the Board of Trade with this end in view.

Toronto has great possibilities and great attractions, but its weak spot is its municipal corporation. Business common sense is as necessary to the government of a city as it is to the management of a commercial enterprise, but the average member of the Toronto city council is poor in business common sense. When commercial problems are up for solution the governing body seems incapable of grappling with them, and they either kill or maim them by their stupidity or apathy.

Fortunately the Board of Trade is interesting itself in this publicity proposition. Otherwise we fear it would afford another opportunity for an exhibition of municipal blundering. A business council is necessary to deal with business problems.

THE WHEAT DISTRIBUTION.

ACCORDING to figures compiled in Winnipeg by Warehouse Commissioner C. C. Castle, the bulk of the western wheat crop has now been marketed. On November 30 51,784,980 bushels had already been marketed and he estimated that there were left in the possession of the farmers 36,633,000 bushels. His total estimate of the season's "bumper" crop is therefore 88,418,000 bushels, not quite so large as some enthusiasts predicted earlier in the season but nevertheless the largest crop on record. Moreover, the bulk of the season's wheat crop has graded high, a very important consideration when the grower counts the season's gains.

Not all of the wheat still in the farmers' hands will be shipped out of the west; it is estimated that 14,091,000 bushels will be required for seed and for consumption by country mills, leaving about 22,542,020 bushels still to be shipped. Adding the amount of wheat in store at country points waiting for cars it is probable that more than 40,000,000 bushels have still to come forward. The following table shows in detail the distribution of the crop:

Estimated yield ...		88,418,000
Inspected to date, 30,525 cars 30,525,000		
In store, country elevators, C.P.R..13,229,052		
In store, country elevators, C.N.R.. 2,165,890		
In transit, C.P.R.... 2,129,038		
In transit, C.N.R.... 577,000		
Milled west of Winnipeg to date 3,159,000		
	51,784,980	
In farmers' hands....36,633,020		88,418,000
Less required for country mills 5,591,000		
Less required for seed 8,500,000		
	14,091,000	
Balance to market..		22,542,020
Add amt. in store, in transit		18,100,980
Balance available to move by railways		43,643,000

From these figures it is evident that while much has already been accomplished by the railways, there is still a large proportion of the crop for which the growers have not yet received their money. A very large amount of money is still to be put in circulation. The effect of the wheat money in relieving financial stringency has already been very noticeable; bills have been paid and the load of credit has been very considerably lightened. A further improvement will be experienced as the balance of the crop is marketed. The prosperity of the west was never on a more solid basis.

KEEPING CLERKS' TIME

A COUPLE of weeks ago Mr. W. H. Wiggs, head of the Mechanics' Supply Co., Quebec, raised an interesting question in a letter published in these columns. The matter of keeping of clerks' time, the payment for overtime and the payment for lost time through sickness or for holidays, is one of interest to all business men whether wholesalers or retailers.

The questions asked have brought a prompt response, and the two replies published this week deal with the subject in an interesting manner. Other articles touching upon various phases of the question will appear in future issues of Hardware and Metal. So far, however, the discussion has been participated in chiefly by jobbers and as retailers will have more time to take up correspondence after the holiday rush, we may expect to hear from them shortly.

Mr. Fred Lariviere, president of the well-known hardware plumbing supply house of Amiot, Lecours & Lariviere, Montreal, writes instructively as follows:

"Editor Hardware and Metal:—

"Agreeable with your invitation, I take pleasure in expressing my views on this interesting and very important question.

"I admit that properly managed factories must necessarily have a record of time of all employes, with fines imposed on those coming late and paying extra hours; a time clock is the best record I know of and same should be used in stores, but with no fines, different rules and regulations, especially for hardware clerks. Everybody knows the great variety of articles comprised in hardware. This business not being divided in departments confined to special clerks, it becomes necessary. for the employes to be able to fulfill their duties, to have a good knowledge of all the lines, and this, therefore, becomes brain work which in my opinion should not be treated as manual labor, for the success of a house depends largely on the ability of the employes. Moreover, the hardware clerks are not paid extra for overtime given to customers at meal time, closing hours and during stocktaking.

"To old employes I have always paid salary during time of sickness, and have also given leave of absence for funerals and other similar circumstances, besides a week's vacation with pay to all employes having over a year's service.

"I treat every employe, from the small office boy to the superintendent in a fatherly way, taking care not to reprimand him before customers or fellow-workers, and I find that I get much better service with this principle. A clerk will readily admit his wrong doings (if he be truthful) alone with you, but will always find an excuse if reprimanded in presence of others and he appreciates the deference you have for him, which will naturally please him, and as a result he will take more interest in his work, will be satisfied with his position, will feel at home in the establishment and will not only come on time, but will work well while at business whether the superintendent is there or not.

"In my experience I have found the young clerks were those generally late; the old hands being always on time. In looking over the time sheets I can easily detect those coming late accidentally or customary; it must not be forgotten that any clerk who knows that he may be called at any moment to account for his lost time, will try to be punctual, provided he is not bold enough to have his time registered by a friend, or come in himself, register his time and then leave the store by the side or back door for a quarter or half an hour: and when he does re-appear, tell you he was in another departemnt, or in the lavatory. If this happens often I simply discharge such employe.

"The above are the best results of many experiences made during my 25 years in the hardware business.

"Yours very truly,

"FRED LARIVIERE."

Another letter containing several valuable suggestions is given below, the writer being Mr. John T. Fisher, representative of Messrs. Lockerby & McComb, manufacturers of building papers, etc., Montreal. Mr. Fisher writes:—

"Editor Hardware and Metal:—

"In answer to Mr. Wiggs' inquiry of Dec. 9th, in regard to keeping of clerks' time, it gives me very much pleasure to give a few ideas on the subject. In every large factory, warehouse, departmental store, you will find the clock system installed, and will find that it also saves a great deal of time, to say nothing of the trouble that used to be with the old brass check system in factories.

"In regard to fines or rewards, I would suggest for a large warehouse that no fines should be charged to an employe, but the clock record should be watched closely, and if an employe has been late more frequently than thought necessary he should be spoken to and brought to bear that he is to be on duty at 8 o'clock, not 8.15 or 8.30, such as the clock record shows. Should this continue, it would be better and cheaper to have the person dismissed, as it will be found the best employe will make it not only to his employer's interest, but to his own, to be on time.

"In the matter of extra time made after hours in busy seasons, it would not be necessary to pay extra wages to an employe whatever. Of course, it will be understood in this case, that every man is paid for two weeks' vacation in the Summer, and close every Saturday afternoon at 1 o'clock sharp. It makes the employe feel happy and that you appreciate his work.

"If an employe is sick. This is a matter better left to the head of the department with whom the person is working. For an old employe it would only be right that he should be paid for his absence in case of sickness, but sometimes we will find fickle employes, who will stay away for little cause whatever, and would rather suggest that they be not paid.

"In regard to absence on account of funerals, in case of relatives, every employe should be granted the absence, and his time marked O.K. for the day or days he is away

"Yours very truly,

"JOHN T. FISHER."

Other readers are invited to express their opinions on this subject. Let the clerks who read Hardware and Metal (and there are many intelligent ones capable of discussing such a question) also be heard from. It is not necessary that names be published and any clerk or other correspondent who has something to say and prefers to use his initials or a non de plume, can do so.

A MERRY CHRISTMAS.

CHRISTMAS comes but once a year —and most people, after the rush of Christmas trade, present buying, giving and receiving is over, are glad that the joyous day is not more than an annual event. And when another year rolls by, how young and old count the weeks to the coming anniversary of the birth of Christ!

The giving of presents, the family reunions, the turkey, plum pudding and Christmas cake which have become associated with the day, all tend to make the day a merry one. But to thoroughly enjoy the holiday one must give as well as receive; one must wish others a "Merry Christmas"—and endeavor to make the wish a reality—rather than, sponge-like, absorbing what others give without making a return.

It is a good thing to observe Christmas Day. The mere marking of times and seasons when men agree to stop work and make merry together is a wise and wholesome custom. It helps one to feel the supremacy of the common life over the individual life. It reminds a man to set his own little watch, now and then, by the great clock of humanity.

Hardware and Metal extends its best wishes to all its readers at this season. May the day be a pleasant one in the lives of all—one that can be looked back upon in future years as one of the happiest of a long lifetime. Again we say: "A Merry Christmas."

CANADIANS OUTWIT YANKEES.

IN the recently published report of Special Agent Charles M. Peppar, who made a trip through Canada investigating the industrial conditions and possibilities of this country on behalf of the United States Government, an interesting reference is made to how Canadian manufacturers outwitted their American—can we say competitors? In referring to how the Canadian trade is being developed by home manufacturers Mr. Peppar says, "The American shovel manufacturers also lost a permanent Canadian trade by agreeing several years ago to accept a cash bonus and stay out of the Dominion market. The result was that when they wanted their share in this field they found the Canadians had it well under control."

Readers of Hardware and Metal are well aware of the existence of the arrangement referred to, and will be interested in how the slow-witted Canadians, as "smart Americans" are wont to consider the people of this country, got ahead of the American shovel manufacturers. For a certain consideration the latter agreed to keep out of our market, and they thought they were getting "easy money." But the Canadians, having the field to themselves, went ahead improving their plants, extending their business connection and generally strengthening themselves. When too late the Americans found they had been gold bricked.

The entry into the Canadian field of the two new shovel factories at Hamilton and Peterborough may have a far-reaching influence on this branch of industry. While large stocks will be required for the extensive railway building to be done during the next few years it is likely that keen competition will take the place of the quietude existing in this trade for several years past. No one is more interested in the situation than the hardware merchant, and he will watch future developments with keen interest.

SUPPLY MEN COMMITTED.

On page 53 a resume of the progress of the conspiracy trials this week is given, the result being that 120 members of the Master Plumbers and Central Supply Associations were committed for trial. After this case was concluded the one against Messrs. A. A. McMichael, W. H. Carrick and H. T. Bush, supply men, and Fred Armstrong, K. J. Allison and C. H. Beavis, master plumbers, was taken up, the result being that the three latter were released because of previous convictions. The three supply men were, however, committed for trial.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 11.

THE travellers who have been successful on the road are numerous, but when the superlative degree is applied, the number dwindles greatly. This small and select body of most successful salesmen includes Mr. Joseph E. Auger, who is the subject of our sketch this week.

Mr. Auger learned the hardware business with James Walker & Co., Montreal, where he was employed for ten years. Being seized with the "Western fever," he then accepted a position with the J. H. Ashdown Co., of Winnipeg. Mr. Auger had great success in repre-

J. E. Auger,
Representing the Sherwin-Williams Company in Montreal.

senting this firm on the road, covering the Northwest between Winnipeg and Vancouver. Later on he went with Sample Benjamin & Co., a United States firm, whom he represented in Wisconsin. Coming east again Mr. Auger joined the traveling staff of the Canada Hardware Co., of Montreal, and for three and a half years he sold their goods from Montreal to Halifax.

He then accepted a position with the Sherwin-Williams Co., whom he has represented in the City of Montreal for the past four years. Although it has been uphill work, Mr. Auger has met with phenomenal success in introducing "S. W. P," and now has over three hundred of the best accounts in the Royal City. This business has grown so rapidly that at the Salesmen's Convention held in Chicago last year, he was granted the top notch button for the best increase in sales, and first prize for varnish sales. Not content to rest after this recognition, he applied himself even more strenuously to his work, with the result that, at the convention recently held in Montreal, he was awarded the top notch fob for the Canadian division.

Mr. Auger is of French and German descent, his father, the late J. C. Auger, having been registrar of Montreal East. However, he speaks English perfectly and his knowledge of both languages is of immense assistance to him in working the cosmopolitan City of Montreal.

"Joe," as he is familiarly known, is a strong believer in the policy of winning a dealer's confidence, even though that involves a considerable amount of time and trouble on his part. Don't promise too much, is his maxim, but always keep your promises. By paying prompt attention to his customers' slightest requests and by his never-failing courtesy and politeness, even under discouraging circumstances, Mr. Auger has gained a warm place in the hearts of the Montreal trade. He makes it a point to keep well posted in his line, and being convinced that his goods are right, he manages to communicate his own enthusiasm to his customers.

PRIZES FOR XMAS DISPLAYS.

HARDWARE AND METAL, for the encouragement of good window displays, has decided to open a competition for its subscribers. Prizes will be awarded for photos or drawings of window displays of Christmas goods and accompanying descriptions of the same. The prizes will consist of:

First Prize	**$5.00**
Second Prize	**3.00**

and $2 for every picture and description which is considered worthy of publication.

The competition, which closes on January 15, 1906, will admit of photographs, pen and ink or wash drawings, with good ideas counting more than the pictures, although, of course, all pictures, in order to receive a prize, must be of sufficient distinctness and good workmanship to admit of their publication.

Mark all manuscripts and photographs intended for this department with the words "Window Dressing Competition."

Care should be taken to avoid reflection in the photograph. The best photos are often taken at night.

PERSONAL MENTION

Quebec.

Mr. Albert Pontbriand, of South Roxton, was in Montreal a few days ago.

Mr. Aime Lemieux, general merchant, of Henryville, visited Montreal during the week.

Mr. Owens, of Owens Bros., general merchants, Montebello, paid a visit to Montreal recently.

Mr. J. E. Seale, general merchant, of Morin Flats, visited Montreal on a buying expedition last Wednesday.

Mr. S. Henry, general merchant, of Maxville, Ont., visited Canada's commercial metropolis a few days ago.

Mr. Thos. McQuillan, of Toronto, president of the Commercial Travelers' Association of Canada, was in Montreal last week.

Mr. J. R. Marlow, manager of the transportation department of the Canadian Manufacturers' Association, was in Montreal recently.

Mr. J. A. Jackson, of the sales department, Lewis Bros., Limited, is spending the Christmas vacation in Brantford, Ontario.

Mr. Sydney T. Hackett, Canadian representative of Ironsides, London, England, left Montreal on a trip to the Old Country a few days ago.

Mr. Henthorn, of Marsh & Henthorn, founders and machinists, Belleville, Ont. was in Montreal a few days ago, and visited some of the supply houses there.

Mr. C. M. Strange, director of Lewis Bros., Limited, is taking his first holiday in nineteen months this week, and is enjoying himself in Kingston, Ontario.

Mr. J. N. Walker, of Caverhill, Learmont & Co.'s city staff, Montreal, has quite recovered from his recent severe and painful illness. Mr. Walker had been for some time laid up with a poisoned hand.

The 51st annual dinner of the Caverhill, Learmont & Co. boys took place at Peloquin's Hotel on the Back River on Friday night of last week. A good number went out by trolley and enjoyed themselves immensely.

Among the travelers of Caverhill, Learmant & Co.'s staff who are at present in Montreal are: Mr. J. H. Brent, of Toronto, Mr. J. A. Laporte, of the Quebec province staff, and Mr. Wm. Leslie, who has been covering Eastern Ontario.

A very effective window is being shown by L. J. A. Surveyor, St. Lawrence street, Montreal, this week. In the background is a firearms advertisement, while the window proper displays such seasonable goods as silver-mounted heaters, patent coils, tea kettles and skates.

A fire on Tuesday morning did $700 damage in the premises of Hector McKenzie, plumbers' supplies, and agent for Beaver oils, Craig street, Montreal. The blaze, which originated in the basement, climbed up an elevator shaft and got in between the flooring, but as there was not much oil in the place, the firemen soon put it out.

Mr. J. Harry Roper, who recently took over the agency in Canada of J. Shaw & Son, Wolverhampton, Eng., has just returned from a trip to the headquarters of his firm. Mr. Roper was for years with Mr. Alex. Gibb, of Montreal, where he acquired a connection that cannot fail to be a great asset to him in his new work on his own account.

Mr. Fred. W. Doty, of the Doty Engine Works, Goderich, visited Toronto this week on a business trip. Mr. Doty has a wide reputation as a manufacturer of marine engines, and his growing business has required the extension of the Goderich works.

Ontario.

Mr. Eager, manager of the Toronto branch of Wood, Vallance & Co., visited Hamilton last Saturday.

Major Allan, hardware merchant, Newmarket, was a visitor in Toronto during the past week.

Mr. W. W. Near, of the Page-Hersey Co., Guelph, made a business trip to Toronto this week.

Mr. H. J. Morden, who has been with the Standard Ideal Company at Port Hope, has left for Colborne, where he has purchased Roblin's hardware store.

The store of James Rolston, Dunnville, was recently broken into by thieves and considerable damage done to the windows and vaults in addition to smashing the safe and making off with a quantity of deeds and other private papers, cutlery, guns, etc., and nearly $100 in cash.

Mr. David Humphrey, superintendent of the plumbing department for Hon. Frank Cochrane, Sudbury, has been in the general hospital, Toronto, for a few weeks, undergoing an operation for appendicitis. His many friends will be pleased to hear that he is recovering and will soon be around again.

Messrs. Maxie Morrell, manager of Lewis Bros.' Toronto branch; J. R. McMillan, W. R. Tait, W. R. Dunn and N. A. Wylie, traveling representatives in Ontario for this fiem, left Toronto on Wednesday to attend the annual banquet and conference of Messrs. Lewis Bros.' travelers, held in Montreal on Thursday night.

Mr. H. Clucas, manager of the Toronto branch of the Canada Paint Co., has returned from the annual convention of this company's travelers at Montreal last week. When Hardware and Metal called on him this week the scribe was presented with a beautiful watch fob of solid silver in the form of a miniature elephant, this being emblematic of their well-known elephant brand of paints.

Rice Lewis & Son exhibited a timely window last week, when the snow was on the ground, the window being made up of toboggans, snowshoes, skis, skates, and other Winter goods. A feature of the display was a card giving the regulations governing the four toboggan slides which the park commissioners have established at High Park. This sport has become very popular in Toronto during the past couple of Winters.

Practically all the traveling representatives of the various Toronto jobbing houses were taken off the road in the early part of the week, and will remain at headquarters until after New Years, facilitating the closing up of the year's business and commencing stock-taking. Amongst those from a distance who are in Toronto are Messrs. J. P. Fluker, Pembroke, and H. Hocking, Fort William, both representatives of H. S. Howland, Sons & Co.

Mr. Anderson, one of the traveling representatives of the Winnipeg branch of the McClary Mfg. Co., passed through Toronto this week on his way home to Hastings, where he will spend the Christmas holidays. Mr. Anderson reports that so popular have been McClary goods in the Northwest that their stock was practically sold out and the travelers had to be taken off the road about the middle of November. The sales in this district for the year show an increase of between $25,000 to $50,000.

Western Canada.

Mr. Fred. Sermon, of the Miller-Morse Hardware Co., Winnipeg, is in Montreal.

The Winnipeg Paint & Glass Co. are building a large warehouse in Calgary, having purchased for the purpose a large site in the wholesale centre from E. F. Hutchings.

Mr. C. D. Waldon, salesmanager of the Pease-Waldon Co., Winnipeg, left for the east during the week, traveling via Chicago. Mr. Waldon will spend about three weeks in Toronto.

Mr. H. V. Lawlor, of Henderson, Potts Co., Limited, will return to Winnipeg in a few days from an extended western trip. Mr. Lawlor was the first commercial traveler to go to Edmonton over the C.N.R.

Mr. Hyman Miller, president of the Miller-Morse Hardware Co., Winnipeg, has postponed indefinitely an intended trip to England. The sudden death of the late Mr. Morse has interfered with his plans in this matter.

Mr. A. J. Falconer, Deloraine, intends spending the Winter in California and he leaves shortly for the land of Winter sunshine and flowers. Mr. Falconer is a prominent member of the Western Retail Hardware Association, and he will be much missed at the semi-annual meeting in February.

Mr. G. F. Stephens, of Winnipeg, expressed mild surprise to Hardware and Metal this week when asked about the report in the daily papers that his firm are about to start up in Calgary. G. F. Stephens & Co. have, of course, been established in Calgary for several years. They are now building a large new warehouse.

His friends are congratulating Mr. J. E. McRobie, of Winnipeg, on his election to the vice-presidency of the Northwest Commercial Travelers' Association. Every hardwareman in the west knows the genial Retail Hardware Association secretary, and all will be glad to learn of the new honor conferred on him. His election is deservedly popular among commercial travelers and retailers.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Linseed Oil has advanced one cent.
Floor Hinges are quoted lower.
Bommer Hinges 33⅓ off list.
Chicago Hinges 45 off list.
Shot has advanced to net list.
Canadian Pig Lead has declined to $4.55 and $4.65.
Ingot Copper has advanced to 20½c.

TORONTO.

Linseed Oil has been advanced by some dealers.
Shot is now quoted at net list.
Sheet Copper has advanced to 25c. per pound.

WINNIPEG.

Pig Lead has advanced 25c.
Shot has advanced 25c.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Dec. 22, 1905.

ALTHOUGH there are still a few travelers on the road sending in a fair quantity of orders, the majority of them are now resting up for next year's campaign, and stock-taking has begun in earnest.

Only a few price changes of any importance have been made this week, and, in nearly all cases, they show an upward tendency. The only exception to this tendency, in strictly hardware lines, is the decline in floor hinges, due to an open market in the United States. Discounts on Bommer hinges are now 33 1-3 per cent., while Chicago goods are selling at 45 off list.

Shot has once more advanced, as the primary market shows little or no break in strength. Quotations are now at net list.

Local firms are constantly in receipt of letters from American hardware manufacturers, withdrawing prices on their respective goods. The high prices now commanded by all metals has rendered this step imperative. It is almost certain that retailers will have to pay more for their stocks next year, and it would be well for them to pave the way now for advancing their own prices.

Axes—Normal conditions prevail. We quote: Chopping axes, unhandled, $6.00 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—We quote: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Hay Wire—Last week's advance is strongly maintained. We quote: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b., Montreal.

Sewing Machines—Fair sales are being made. Our quotations are as follows: Hand-sewing machines, $11 each, net; complete machines, with stand, $18.00 and up, according to quality.

Lanterns—Our prices remain as follows: Cold blast, $4.50; No. 0 Safety, $5.00.

Rivets and Burrs—No further changes have taken place in these lines, last week's advance still holding good. Our quotations are as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 40 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—Business keeps brisk. We quote: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—Turnover is fair at the same prices as last week. We quote: 3-8 and smaller, 60 to 10; 7-16 and larger 55 and 5.

Horse Nails—Demand keeps up surprisingly well for the season. Prices are unchanged. Following prices rule: C brand, 40, 10 and 7 1-2 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent

Wire Nails—The increased price reported last week has held steadily. We quote: $2.15 per keg, f.o.b. Montreal.

Cut Nails—A sluggish market is reported. We quote: $2.20 per keg, f.o.b. Montreal.

Horseshoes — Shipments are still fairly heavy. Our prices are as follows: P.B. New Pattern, base price, $3.50 per 100 lbs., M.R.M Co. latest improved pattern iron shoes, light and medium pattern No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $4, No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60 Toeweight, all sizes, No. 1 to 4, $6.85 Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes, 25c.

Sporting Goods—We are quoting as follows: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.. American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred pounds; chilled, $7.00 per hundred pounds; buck and steel, $7.50 per hundred pounds; ball, $8.00 per hundred pounds. We quote discounts 10 per cent. on shot, f.o.b., Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper— The trade is very quiet at present. Prices are stationary at the quotations given in the back of this issue.

Cement and Firebrick—The market in cement is almost stagnant now. Firebrick, however, is selling in fair quantities. Our prices are as follows: $1.80 to $1.90; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2.00 to $2.10 ex-cars; Canadian Portland, $2.00 to $2.05. Firebrick, English and Scotch, $17.00 to $21.00; American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags, $2.05 in barrels in round lots.

Coil Chain—Our prices are as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3.00; 1 inch, $2.95.

Shot—Following the progress of pig lead, shot has been advancing right along, and is now quoted at net list.

Skates—The demand for skates, and especially the higher-priced grades, is abnormally large this year. Our prices are from 25c. to $2.50, according to quality.

Sleigh Bells—We quote: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape, $1.15 to $2.00; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2.00; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—Our prices are: Jute, unlined, $4.50; 3-4 lined, $9.50; full lined, $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snowshoes — It is practically impossible to secure deliveries on most lines. We quote from $15 to $35 per dozen pairs, according to quality.

When you build or remodel, figure to have plenty of room for tables. Shelves are necessary, but tables help out in the displaying of lines which you want brought to the attention of your trade immediately.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Dec. 22, 1905.

SHOT has advanced again and is now quoted at the net discount rather than the 5 per cent. discount which was quoted by us last week. The high price of lead recently has been the cause of the three advances which have been made during the past six weeks. With this exception there have been no changes.

Travelers are taking their Christmas holidays and are helping in the work of stock-taking, which will commence in most wholesales next week. They all report business to have been very satisfactory although the mild weather during the Fall has handicapped the retail trade considerable.

Considering that this has been the week before Christmas trade has kept up very lively and shipments from the jobbing houses have been quite large. Now that the holiday trade is over, however, a falling off is expected.

Axes and Handles— Shipments are fairly large.

Cutlery and Silverware—Demand has kept up well, the volume of the season's business having been very large.

Sporting Goods—Shotguns and ammunition are having a fair sale.

Washing Machines—Trade is reported to be falling off.

Chain — We are still quoting prices as follows: 1 inch, $6.50; 5-6 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Quotations continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire—Quotations continue unchanged and business seasonable. We still quote: $2.42 1-2 f.o.b. Cleveland. In barb and coil spring wire a seasonable trade is being transacted.

Wire Nails—A good trade is reported at the advanced prices. We are quoting $2.25 with the usual 10c. rebate.

Cut Nails — A satisfactory volume of business is reported. Quotations are: $2.40 per keg f.o.b. Toronto.

Horse Nails—Orders are satisfactory and shipments large.

Horseshoes— Trade continues brisk; prices firm. We quote: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7.00. If shipped from factory 15c. less.

Horse Blankets—Business in halters, girths, horse blankets and similar goods is active.

Skates and Sleigh Bells—The coming of snow and ice has created many sorting orders and shipments are large.

Screws—Advancing prices in metals make the market very firm, but prices are unchanged.

Rivets and Burrs—Copper rivets and burrs have advanced, but iron goods are unchanged.

Bolts and Nuts— Demand is active and prices very stiff.

Cordage—Sorting orders are plentiful. We still quote: Manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 9c.

Cement—Prices are unchanged and trade is seasonable. Our prices are: For carload orders f.o.b. Toronto, Canadian Portland, $1.90 to $2.00; American Portland, $1.90 to $2.00. For small orders ex warehouse, Canadian Portland, $2.10, American Portland, $2.10.

Firebrick—Prices continue as before: English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c.; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—Prices continue unchanged and a fair trade is being done.

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Dec. 22, 1905.

BOOKINGS are naturally very light during this, the Christmas, week, but the firm tone of the market has been well maintained, the only disposition for lower prices being seen in Canadian pig lead, which has declined slightly. Otherwise, the market is very strong, some further advances being in evidence.

Antimony has now recovered strength and is quoted considerably higher in the Old Country. The prospects are that Canadian dealers will have to advance their prices before long.

Conditions in ingot tin are just about the same as last week, though there is now more of a scarcity apparent. Copper has shown still further strength and has been advanced to 20 1-2c. for ingots. It is extremely difficult to get deliveries of this metal. The prices in New York at time of writing are extremely high and would allow but a very small profit to Canadian dealers on the quotations we give. No reduction is to be looked for in either tin or copper.

We are giving a decline in pig lead this week, although the market in foreign pig is just as strong as ever and indeed even stronger than before. Both in New York and in the Old Country prices are very high.

In sheet metals the strength which has been manifest for several months has by no means abated, and no concessions can be obtained even for large quantities. Canadian importers have been refused good offers on large shipments from the Old Country, thus showing the tendency of the market. Business generally is keeping up remarkably well and is giving the local jobbers no time to take stock.

Canada Plates—We are still quoting the following prices: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75; galvanized, 52's, $4.10; 60's, $4.35.

Copper—Another jump in price has occurred during the past week leaving the market decidedly strong, so that no reduction may be expected for some time yet. Our prices now are: Ingot copper, 20 1-2c.; sheet copper, base sizes 25c.

Ingot Tin—Whether market manipulators are gaining their end in striving for a corner, or not, it is hard to say, but at any rate there seems to be a scarcity of this metal and the tone is very firm at present time. We cannot now quote under 40c. a pound even for large quantities.

Pig Lead— Although the Canadian product has declined somewhat, foreign pig is still quoted as high as ever. The domestic article is now selling at from $4.55 to $4.65 per 100 lbs.

Boiler Tubes—Slight advances have been made on both Scotch and American tubes and importers are now paying from 1-4c. to 3-8c. more than last week. The mills are very busy and deliveries on fair sized quantities cannot be obtained under six or eight weeks. Small quantities can, of course, be shipped immediately ex-store. Jobbers are still quoting as follows: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—Last week's advances are being held firm and will likely remain so until the Spring. Of course most of the Canadian consumers are well stocked for the Winter, but there are occasional small lots being shipped. We quote:

"Dom.," No. 1, $19.50 to $20.00 delivered Montreal.
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal.
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	23.00	"	"
" (special)	22.00	"	"
Summerlee No. 1	23.50	"	"
Clarence No. 1	20.00	"	"
" No. 3	19 50	"	"

Tool Steel— We quote: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Haradening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed Steel, 60c.

Merchant Steel—Last week's prices are unchanged. We still quote as follows: Sleigh shoe, $2.17 1-2; tire, $2.27 1-2; spring, $2.75; toecalk, $2.82 1-2: machinery iron finish, $2.27 1-2; ruled machinery steel, $2.75; mild, $2.17 1-2 and

upwards; square harrow tooth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

Cold Rolled Shafting—We quote: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch. $3.50 per 100 lbs.

Galvanized Iron—Prices given last week are firmly held with a tendency for advances in the near future. Our quotations are as follows: Queen's Head, 28 gauge, $4.25; 26 gauge, $4.00; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge. $3.40; Fleur-de-Lis, 28 gauge, $4.00; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.25; Comet, 28 gauge, $3.85; 26 gauge, $3.60; 22 and 24 gauge. $3.35; 16 to 20 gauge, $3.10; Bell brand, 28 gauge, $4.20 to $4.25; Gorbal's "Best Best," 28 gauge, $4.10. "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots 25c. extra.

Black Sheets—We are still quoting. 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

Antimony—The Old Country market is much higher this week, and it is thought that Canadian dealers will soon be forced to advance their prices again. Meantime we quote: 14c. to 14 1-2c. for Cooksons.

Tin Plates—Our prices are as follows: Cokes, base size, 1C, 14 x 20, $4.00; charcoal, base size, 1C, 14 x 20, $4.25.

Terne Plates— We are still quoting $6.85.

Ingot Zinc—Prices remain the same as before, that is 7c. to 7 1-4c.

Sheet Zinc—We still quote 8c. in casks and 8 1-4c. in less than casks.

Sheet Lead—We are quoting: 2 1-2 lbs., 5 1-2c. by the roll; 3 lbs. and heavier, 5 1-4c. by the roll; large quantities, 25c. per hundred pounds.

Bar Iron—Local price remains at $1.97 1-2, f.o.b., Montreal.

Old Material—Metals generally are in remarkably good demand and the tone this week is a shade higher than last, although we have not changed our quotations. The rubber market is very quiet and sales are small. It looks as if the price would weaken somewhat, but much doubt is expressed as to the prospects in this branch. Our quotations are as follows: Copper wire, 14 3-4c.; light copper, 13 3-4c.; heavy red brass, 12 1-2c.; yellow brass, 9 3-4c.; light brass, 7c.; lead, 3c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $11; mixed rags, 75c. to 90c. per 100 lbs.; old rubbers, 7 1-4c. to 7 1-2c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Dec. 22, 1905.

ANOTHER advance of 1c. per pound has been made on sheet copper, this now being quoted at 25c., the highest price it has reached since 1899, and about double the lower figures quoted in 1902. Other metals remain at the same figures quoted last week with the exception of antimony which has advanced from 14 1-2c. to 15c. Londonderry pig iron is not held as firmly as quoted by us last week and in large quantities the price can be shaded considerably.

A good business is being done, although the holidays have affected business somewhat. All metals are strong, however, and the market is very firm.

Prices of both anthracite and soft coal have been advanced considerably of late, the mine owners and railways taking advantage of the necessity of the public and of the probability of a strike in the Spring. The figures we quote this week are held to quite firmly and with the strike scare hanging over the market there is little probability of lower prices for some time.

Pig Iron—Large buyers can buy Londonderry at $21.50, so we are shading our quotations to that figure. Prices of other lines are very stiff. We quote:

Middlesboro, f.o.b., Toronto	$22 50
Hamilton, No. 1, at furnace	20 00
" No. 2, "	19 50
Midland, No. 1, "	20 00
" No. 2, "	19 50
Radnor, at furnace	31 50
Londonderry, f.o.b. Toronto	21 50

Bar Iron—A good trade is being done at unchanged prices. We still quote: $2.00 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

Ingot Tin—The market is very active and stock scarce. We quote 40c.

Tin Plates—Demand continues strong and prices stiff.

Galvanized Sheets—Conditions are unchanged, the demand being heavy at the same quotations.

Brass—Business is satisfactory, discounts continuing at 10 per cent.

Lead—Last week's advance is being held to locally. We quote as follows: Pig lead, $4.60 per 100 lbs., and bar lead, $5.00 per 100 lbs.

Zinc Spelter—Business is reported active with prices unchanged. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—Sheet copper has been advanced again. We quote as follows: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

Antimony—An advance from 14 1-2c. has been made and 15c. is now quoted.

Old Material—The amount of goods being received is very large for this season. Dealers' buying prices are as follows: Heavy copper and wire, 14c. per lb.; light copper, 13c. per lb.; heavy red brass, 12 1-2c. per lb.; heavy yellow brass, 10c. per lb.; light brass, 8 1-2c. per lb.; tea lead, $3.00 per 100 lbs.; heavy lead, $3.25 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $10.50, No. 2 wrought $3 to $5; machinery cast scrap, $15; stove plate, $10; malleable and steel, $5; old rubbers, 7c. to 7 1-4c. per lb.; country mixed rags, 75c. per 100 lbs.

Coal—Recent advances are attributed to a scarcity caused by the railroads and mine-owners taking advantage of the possibility of a strike to make a good margin on this Winter's sales. We quote: Anthracite in cars at bridges, grate, $5.50 per gross ton; egg, stove and nut, $5.75 per gross ton; pea, $3.75 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.70; 3-4 inch, $1.60, run of mine, $1.40; nut, $1.25; N.P. and S., $1.00; slack, 75c.; box cars 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.80; 3-4 inch, $2.70; mine run, $2.60; slack, $2.35.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, December 21, 1905.

THE report in one of the leading daily newspapers that the United States Steel Corporation has on its books orders aggregating over 7,300,000 tons is true. No one fact could better serve to show the condition of the steel works and rolling mills of the country, since it is well known that the other large companies are similarly committed for their full capacity for a long period to come.

A shortage of basic pig has again developed in the eastern markets. One steel works took 5,000 tons at $17.90, delivered; another took a like quantity, while a third purchased 15,000 tons in addition to purchases of 10,000 tons made a short time ago. A fourth eastern steel company is now in the market for 18,000 to 20,000 tons for delivery during the second half of 1906.

The scarcity of steel is indicated by the fact that the Ohio works of the Carnegie Steel Company will be taken off from rails and put on sheet and tin plate bars in January. Only about 75 per cent. of the sheet mill capacity of the corporation can now be operated on account of the scarcity of steel, while 92 per cent. of the tin mills are running when more capacity ought to be employed. It was hoped that the wire trade would slacken this month so that steel could be diverted, but the pressure on the wire mills is too great.

There is a heavy export movement in progress, and a very much larger tonnage could be taken were it not for the pressure of requirements from the home markets. Among recent inquiries is an aggregate of 20,000 tons of rails for New South Wales and Mexico. The large Canadian business has not yet been placed.

The cast iron pipe industry continues to flourish. It is stated that never before so far in advance of the season had so much business for Spring delivery been booked. Philadelphia gas interests have just placed heavy contracts, but as they were distributed among several foundries the total tonnage is not known. The Philadelphia water department will shortly call for bids on a large quantity of 48-inch pipe, and it is expected that the New York department of water supply will ask bids on a large lot of the same size. Bids will again be opened Friday on 30,000 tons of pipe by the latter, and it is expected that they will be somewhat more numerous than before.

LONDON METAL MARKETS.

From Metal Market Report, December 15, 1905.

Pig Iron— Cleveland warrants are quoted at 52s. 9d and Glasgow Standard warrants at 51s. 9d, making prices as compared with last week 6d lower for Cleveland warrants and 5d lower for Standard warrants.

Tin—Spot tin opened easy at £165, futures at £164, and after sales of 170 tons of spot and 220 tons of futures, closed firm at £165 2s. 6d for spot and £164 2s. 6d for futures, making price as compared with last week £1 7s. 6d higher on futures.

Copper—Spot copper opened easy at £79, futures £78 15s., and after sales of 200 tons of spot and 700 tons of futures closed firm at £79 5s. for spot and £78 17s. 6d for futures, making price as compared with last week £1 lower on spot and 7s. 6d lower on futures.

Lead—The market closed at £17 making price as compared with last week 6s. 3d lower.

Spelter—The market closed at £28 12s. 6d, making price as compared with last week 2s. 6d lower.

"Eastlake" shingles

"Eastlake" Metallic Shingles are veritable trade bringers to the dealer in Sheet Metal specialties. Their economic advantages over wood or cheap metal shingles are so evident to every buyer that the comment and discussion of their merits bring other customers and more trade.

They have no raw, ungalvanized edges and, when put on with the patent "Eastlake" cleat, make a neater job on any roof than is possible with other makes.

Wind, rain and fireproof, "Eastlake" Steel Shingles make the most useful and durable roofing for any building.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto and Winnipeg

We also manufacture:
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts
"Metallic" Siding, (Stone, Brick, etc.)
"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Metallic" Eavetrough and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

416

Nova Scotia Trade News.

Halifax, N.S., Dec. 20, 1905.

TRADE is now falling off in the hardware business, and some of the firms have this week started to take stock. Jobbers report a general advance in shelf and heavy goods.

* * *

Metals attract the most attention. Galvanized iron is quoted at $4 to $4.25 per hundred pounds, and black sheet iron at $2.25. Jobbers say that the cost of the latter is higher, but they have not as yet increased the price. All lead goods show a big advance. Shot may be taken as an example of how the price has advanced. One month ago it was selling at $1.38 per bag of 25 pounds. To-day it is quoted at $1.63. Lead pipe has advanced from $4.55 to $5.50 per one hundred pounds, an advance of about one cent. per pound. Bar iron is quoted at $2.10, and ingot tin at 38c. White lead has gone up 25c. per 100 pounds right through on all brands.

* * *

The blacksmith's business is good at present, and jobbers have been kept busy supplying the trade with toe caulks and horseshoes. Some days the orders came in so fast that the jobbers could not fill them. The price of glass still keeps very high, and no immediate relief is looked for. The stocks held here are very small.

* * *

The Strathcona Coal Co., Limited, have declared a dividend of 4 per cent. on both the preferred and ordinary stock for the year ending Sept. 30 last. The dividend is payable on January 1. The mines of this company are at River Hebert, N.S., but stockholders are largely in Moncton and Sackville. The capital stock is $120,000, of which $50,000 is preferred and $70,000 ordinary. The company are to install a coal cleaning and loading apparatus, with operating engine, at their mine, and the order is being taken by A. Matheson & Co., of New Glasgow. The Atlantic Grindstone, Coal & Railway Co., Limited, of Providence, who have a coal mine near Lower Cove, Cumberland county, N.S., are also putting in a complete bankhead equipment, including tipples, screens, picking tables, etc., the order for which has been placed with the same firm.

New Brunswick Trade News

St. John, N.B., Dec. 18, 1905.

THE noteworthy feature of the hardware market here is the continued firmness, and in some cases the further advances of metal prices. The general tendency so far as metals are concerned, is decidedly bullish. Some dealers believed that advances previously alluded to were the last for some little time, but this idea has proved to have been erroneous. Since the last letter to Hardware and Metal there have been further advances in lead pipe, in sheet iron, bar iron, etc., and it may be said that, generally speaking, the local metal market has rarely been firmer in years. One dealer speaking of the matter pointed out that whereas sheet iron sold for about $1.95 per hundred a few months ago, it is now quoted at approximately $2.40.

* * *

Copper ware is also figuring in the upward movement. A few days back an advance of about ten per cent. on this line of goods came into force. It has not yet, however, and probably will not affect the sale of the goods at all. The demand for copper goods has been showing a steady increase of late, an increase which will continue. Copper kettles are now much more widely used here than formerly and are apparently driving out those of iron.

* * *

Plumbers' supplies have not been behind in respect to advancing prices. As stated above, lead pipe prices have risen recently and solder has followed suit. This news will not be received with equanimity by the householder, who can imagine the effect of the advance on plumber's bills, but such an event will not be surprising to the trade.

* * *

The hardware merchants here have been doing a good bsuiness since the beginning of the Christmas rush. The trade outlook is bright. Collections are fairly good and the indications point to brisk Winter's business, though a lull will follow the Christmas time. The demand for Winter sporting goods is strong, though skate sales were a bit slow in opening up. There is a yearly growth in the interest taken in athletic sports in St. John and this, of course, makes itself felt among the dealers in sporting goods.

* * *

The intimation given in this column of the resignation of Mr. Ebe Perkins as manager of the Maritime Nail Works, proved well founded. Mr. Perkins' resignation has been accepted by the new management of the company. His place has been taken by Mr. Stanley Elkin, who is now the secretary-treasurer of the company. Mr. Elkin is a St. John bred young man who has lately been in commercial life across the border.

* * *

Turpentine now shows an upward tendency. Linseed is also firmer in price.

IN THE LEAD!

In the **prompt** shipping of

Plate Glass

it is a well-established fact that we have constantly been in advance. The demand for our Plate is evidence that our efforts have been appreciated and has been such that to-day we have the **largest stock** and **plant** for handling same in Western Canada

Quotations for Plate delivery sound at your station by wire or mail on receipt of specification.

G. F. STEPHENS & CO.
LIMITED
WINNIPEG, CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Dec. 22, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

FOR the week before Christmas there is an unusually active trade, but of course business is confined at present to sorting orders. There are only two changes of importance this week and both are advances. Shot and pig lead have each been advanced 25 cents per cwt.

Game Traps—A few game traps are still selling. Prices are unchanged. We quote:

H. & N., discount	50 and 5 p.c.
Victor, "	66⅔ p.c.
Newhouse, "	35 p.c.
Bear	$7 each

Lanterns—The market is "open" and it is hard to quote with anything approaching to exactitude. The average prices are about as follows:

Cold blast lanterns	$5 25 per doz.
Coppered cold blast lanterns	7 25 "
Cold blast dash "	7 75 "
Lift Lanterns	4 25 "

Bluestone—Price for 1906 delivery is $5.75 per cwt.

Wire—Prices are steady. We quote:

Barbed wire, 100 lb					$3 00
Plain galvanized, 6 to 8	$3 39	9	$2 50		2 90
" " 10	3 50	12			3 10
" " 13	3 20	14			3 90
" " 15	4 45	16			4 60
Plain twist					3 00
Staples					3 50
Oiled annealed wire, 10	$2 96	11			$3 02
" " 12	3 10	13			3 20
" " 14	3 30	15			3 45

Annealed wires (unoiled) 10c. less

Horseshoes—Prices have been steady since the recent advance in steel shoes. Quotations are as follows:

Horseshoes, iron, No. 0 to No 1	$4 65
No. 2 and larger	4 40
Snow shoes, No. 0 to No. 1	4 90
No. 2 and larger	4 65
Steel, No. 0 to No. 1	5 00
No. 2 and larger	4 75

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—The price has been steady since the recent decline to $2.60 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Pressed Spikes—Prices are firmly held at following quotations:

Pressed spikes, ⅝ x 5 and 6	$4 60
" " 5-6 x 5, 6 and 7	4 25
" " ⅝ x 6, 7 and 8	4 10
" " 7-16 x 7 and 9	4 00
" " ½ x 8, 9, 10 and 12	3 90
" " ⅜ x 10 and 12	3 75

Screws—No change in price. Demand continues brisk at following unchanged discounts:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged and continue as follows:

Bolts, carriage, ⅝ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅝ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—Unchanged in price. We quote:

Coil chain—

3-16 inch	$3 25	¼ inch	$7 20
5-16 inch	5 20	⅜ inch	4 60
7-16 inch	4 45	½ inch	4 30
⅝ inch	4 10	¾ inch	4 00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discounts are now 60 and 5 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g.hickory, doz			$3 15
No. 1	1 90	No. 2	1 60
Octagon extra	2 30	No. 1	1 60

Axes—Prices are quoted as follows:

Bench axes, discount off list	40 p.c.
Broad " " "	25 p.c.
Royal Oak, per doz	$ 6.25
Maple Leaf, "	8.25
Model "	8.50
Black Prince "	7.25
Black Diamond "	9.25
Standard Flint Edge, per doz	8.75
Copper King, per doz.	9.00
Columbian, "	10.75
Handled axes, North Star, per doz	7.75
" " Black Prince, per doz	9.25
" " Standard Flint Edge, per doz	10.50
" " Copper King, per doz	11.00

Butts—The discount on wrought iron butts is 70 per cent.

Churns—The discounts from list prices are 45 and 5 per cent.

Chisels—Quoted at 70 per cent. off list prices.

Auger Bits— Discount on common auger bits is 65 per cent.

Blocks—Discount on steel blocks is 35 per cent. off list prices; on wood, 55 per cent.

Fittings—Discounts are quoted as follows:

Wrought Couplings	60 p.c.
Nipples	65 and 10 p.c.
T and elbows	10 p.c.
Malleable bushings	50 p.c.
Malleable unions	60 p.c.

Grindstones—The price is now 1 3-4c. per lb.

Fork Handles—The discount is 40 per cent. from list prices.

Hinges— The discount in light "T" and strap hinges is 65 per cent. off list prices.

Hooks—Prices are quoted as follows:

Brush hooks, heavy, per doz	$8.75
Grass " per doz.	1.70

Draw Knives—The discount is 70 per cent. from list prices.

Rules—Discounts are 50 and 10 per cent.

Washers—On small quantities the discount is 35 per cent.; on full boxes it is 40 per cent.

Wringers— No change to report. Prices are as follows:

Royal Canadian, per doz	$30.00
R. B., per doz	34.75

Files—Discounts are quoted as follows:

"Arcade"	75 p.c.
"Black Diamond"	60 p.c.
"Nicholson's"	62½ p.c.

Building Paper—The big rush is of course over, but there is still a steady sale at unchanged prices. We quote:

Joliette, plain	40c.
" tarred	65c.
Cyclone, plain	55c.
" tarred	80c.
Anchor, plain	55c.
" tarred	65c.
Pure fibre, plain	60c.
" " tarred	80c.

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—The price is steady since the recent advance. We quote as follows.

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 75
Lathyarn	11 25

Solder—Quoted now at 21c. per lb. with concessions for large quantities.

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.
(Lengths 3, 4, 5 and 8 ft.)

	Painted	Galvanized
28 gauge	$2 85	$3 90
26 "	3 10	4 15
24 "	3 80	5 40

(Any lengths under 4 ft. 10c. per square additional.)

	Painted	Galvanized
28 gauge pressed seam	$3 00	$4 20
28 " "V" crimp	2 95	4 15

SIDINGS.
(Plain brick, rock face brick or stone 17¼ x 23.)

	Painted	Galvanized
No. 1 78 to the square	$3 00	$4 30
" 2 69 " "	2 75	3 90
" 3 55 " "	2 40	3 60

(Large sheets 28 in. x 60 in.)

	Painted	Galvanized
28 gauge	$3 00	$4 05

BEADED CEILING.

28 gauge, painted red	3 10

Vises—Prices are quoted as follows:

"Peter Wright," 30 to 34	14½c. per lb.
" " 35 to 39	14c. "
" " 40 and larger	13½c. "

Anvils—"Peter Wright" anvils are selling at 11c. per lb.

Power Horse Clippers—The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6. The "1904" sheep shearing machines are sold at $13.60.

Ammunition, Etc.—Shot has been advanced 25 cents per cwt. Other prices and discounts are unchanged. We quote:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	20 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.

Loaded shells:

Dominion Eley's and Kynoch's soft, 12 gauge. black	16 50
chilled, 12 gauge	17 50
soft, 10 gauge	19 50
chilled, 10 gauge	20 50
Shot, Ordinary, per 100 lb	6 75
Chilled	7 25
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

Iron and Steel—Prices are quoted as follows:

Bar iron (basis)	2 60
Swedish iron (basis)	4 75
Sleigh shoe steel	2 75
Spring steel	3 25
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	13 00

Black Sheets—No change in price. We quote as before:

Black Sheets, 10 to 16 gauge, 100 lb	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Iron—The market is steady at the recent advance. We quote:

Apollo, 16 gauge	3 90
18 and 20 gauge	4 10
22 and 24 gauge,	4 45
26 gauge	4 40
28 gauge	4 65
30 gauge or 10¾ oz	4 95
Queen's Head, 24 gauge	4 60
26 gauge	4 65
28 "	4 90

Tin Plates—XXI plates have been advanced 50 cents. We now quote as follows:

Tinplate, IC charcoal, 20 x 28, box	9 50
" IX "	11 50
" XXI "	13 50

Terne Plates—Quoted at $9.00.

British Columbia Trade News

Vancouver, Dec. 15, 1905.

THIS week the Vancouver Board of Trade filed its reply to the C. P. R. Company's statement in answer to charges laid by the Board of Trade before the Railway Commission on discriminative rates to Alberta from British Columbia wholesale centres. The reply of the coast merchants is a practical contradiction of the assertions contained in the answer of the C. P. R. Comparisons of rates as between similarly situated points in the United States are made, to show that the comparisons instituted by the C.P.R. in the figures submitted are not conclusive.

Among the strong points made by the shippers is that in connection with the assertion that they cannot expect a rate which will permit them to bring goods here from the east and ship them back to Alberta and still hope to compete with eastern direct shipments. This the merchants say they do not ask for nor expect. But they certainly do ask that goods shipped from the coast to points east shall not be given a rate across the mountains and back less than Vancouver merchants have to pay for shipping direct.

The only development yesterday was the receipt of a request by Chairman McLennan, of the merchants' committee, from Mr. Bowles, assistant to General Freight Agent Greer, to call the boycott off pending the decision of the Railway Commission. Mr. McLennan asked if Mr. Bowles would agree that the C.P.R. would abide by the decision of the Railway Commission, but he was not free to make that arrangement. In that case, Mr. McLennan for the committee considered that it would not be wise to call the boycott off until some agreement was reached with the railway. It is thought the merchants of Victoria are being subjected to strong pressure not to co-operate with the Vancouver merchants in the boycott, which is being vigorously pushed.

* * *

Vancouver City Council proposes submitting money by-laws to the ratepayers at the coming civic elections, for works and improvements totalling nearly a million dollars. The chief item is that providing for waterworks extension, including the establishment of a high level service, which means practically a new system. This will cost $750,000, and construction will cover three years. The other by-laws are for schools, sewers and streets. In 1905 money by-laws totalling some $600,000 were voted on and carried.

* * *

By the success of A. J. McMillan, formerly managing director of the Le Roi mine at Rossland, in being returned to office after having been voted out at a previous meeting of the directors in London, marked changes are to take place at the mining city. The Le Roi is to be deepened and the ore which has been of late going to the big C. P. R. smelter at Trail is to be shipped to the Le Roi's smelter at Northport, Wash., which has of late been shut down. This smelter is owned by the Le Roi Company, and is located just across the international boundary in the State of Washington.

* * *

Following the annual meeting of the Pacific Coast Lumbermen's Association, held at Tacoma on Tuesday, 12th inst., it is announced that a decision had been reached to raise the price of lumber to a $13 base, to go into effect at once, and to prepare a list on a base of $15, to be effective February 1. This will chiefly affect export cargo trade, but it is noticeable that in local circles the rumor is current that a meeting of the local association is likely to be called ere long to discuss prices for local consumption as well as for export east. The shortage of logs at this season is having some effect on lumber conditions. Another point is brought up, that the continuation of the boycott by local merchants will have the effect of making a car shortage which will adversely reflect on the lumber trade.

* * *

New Westminster is not satisfied with merely recovering her long lost prestige as a deep-sea port, which was effected this month by the arrival of the British ship Wethersfield to load lumber at the Fraser River Saw Mills, some miles above the city. The Royal City now seeks to establish a ship-building industry, the object being to secure Dominion aid by way of bonus per ton on all steel ships constructed there. The appeal of the Halifax Board of Trade for endorsation of their petition to the same effect, set the Royal citizens thinking.

* * *

The British Columbia Telephone Co., operating plants in all the chief cities of the province, announce the immediate construction of a fine three-storey brick block in this city, to be used as a central office. In this a modern switchboard of large capacity is to be installed, the cost being estimated at over $100,000 for the switchboard alone. The first installation will be for 4,000 pairs of direct wires, while with addition of sections the capacity can be raised to accommodate from 13,000 to 14,000 subscribers.

* * *

The C.P.R. has announced its plans for railway construction on Vancouver Island for next year. The extension of the E. & N. Railway, now owned by the C.P.R., through Comox to Campbell River, near the north end of the island, is proposed, and a branch from Duncan's via the Cowichan Valley to Alberni on the west coast of the island is another extension for which power to construct will be sought.

* * *

The Great Northern Railway has issued a new lumber tariff effective on the new branch line to Fernie and on the Nelson-Waneta branch to Winnipeg and and a number of other Manitoba towns. The new rate is 33 cents per hundred, a saving of between 60c and $1 per foot over the old rates. Formerly the trade from the Nelson branch paid a 5-cent local rate to Nelson, and the C.P.R. carried the lumber east from that point at its regular tariff.

* * *

Across the inlet from Vancouver a new city is soon to be born. The North Vancouver rural district is to be divided, and the portion on the waterfront, already being developed as a townsite, is to secure civic life. The expected advent of a railway will give impulse to the city now in process of organization. An agreement has been made with the municipality as it now exists for the installation of street car lines. Some six miles are to be constructed early in the Spring, plans for the work having beens approved by both the municipality and the B. C. Electric Railway Company.

The annual output of the mines of Ontario has practically doubled in value during the past year. For the period of nine months, ending with the 30th September, 1905, the total value of the products was $9,000,000, as compared with $5,061,677 for the whole of 1904. The Sudbury nickel mines are now producing the world's largest supply of this mineral, the value of the output for the last nine months being over $2,531,000. Gold was mined to the value of $67,259; silver, $1,300,000; cobalt, $75,000; copper, $522,764; pig iron, $2,907,864, and steel, $2,421,549.

FOUNDRY AND METAL INDUSTRIES

A shipment of mica valued at $700 was made by J. Adams, Perth, recently.

The total sales of the Dominion Coal Company this year will be about 3,300,000 tons, of which 1,118,000 went to the St. Lawrence market.

An explosion in the engine room at the Deseronto Iron Works injured two men last Friday and has caused the closing down of the works.

The Geological Survey Department has issued a report regarding the great coal fields said to exist near Nicola and Quilchena, about 50 miles from Kamloops, B.C.

An effort is being made to interest British capitalists in Nova Scotia gold mines. J. O. James, a Nova Scotia mining engineer, is now in England working to this end.

The output of mineral in the mining district of British Columbia was the largest on record during the first week in December. Over twenty mines shipped ore to smelters, etc.

The steel rail mill of the Lake Superior Corporation at the Soo is said to have sufficient orders booked to keep the plant running to its full capacity for the first half of 1906.

The Boundary Falls smelter was blown in last week. The one furnace now in commission will reduce about three hundred and fifty tons daily from the company's mines. The second furnace is to be blown in later.

The British Columbia Copper Co. have contracted for the enlargement of their reduction works. Three new blast furnaces, each having a capacity of over 500 tons per day, will be installed.

Dr. Haanel, Superintendent of Mines, has received a sample of the first pig iron turned out at the Government experimental electric smelter at Sault Ste. Marie. It is of very superior quality.

Work on the new foundry to be erected at Glace Bay, N.S., for the Dominion Coal Co., has been commenced. The foundry will be built of brick and steel, 90 by 100 feet in size and will cost $25,000.

A Toronto syndicate is said to have secured the right to use a secret German process for the treatment of Cobalt ores. A company with a capitalization of $1,000,000 is to be formed and a smelter established in the Cobalt district.

The Seattle Iron & Steel Co. has purchased considerable iron property near Renfrew, on the west coast of Vancouver Island, and propose to establish pig iron works there to supply material for their steel mill at Seattle.

In the work of establishing a central power plant for all its mines the Dominion Coal Co., Sydney, has purchased three electrical machines of 650 horse power each. The longest distance at present over which power will be transmitted will be No. 6, a distance of about eight miles from the proposed central station at Dominion No. 2.

NETHERY FLUSH VALVE.

A FLUSH valve of exceedingly simple construction, on the contra-hydraulic system, has been making great progress on the Canadian market for the past two or three years. This valve, which is known as the Nethery Flush Valve, does not introduce any absolutely new principle, but has been tested with highly satisfactory results. both in Canada and the United States. The illustrations produced on this page, will serve to make clear the explanation of this valve, which is now controlled in Canada exclusively by the Robert Mitchell Co., Limited, of Montreal, and manufactured also by the James Morrison Brass Manufacturing Co., Toronto.

The Nethery Flush Valve is by no means complicated in design, and its advantages are numerous. The feature which especially appeals to every one interested in the trade, is the fact that it is absolutely noiseless in operation—an advantage which is unique. The simplicity of the valve is such that it cannot get out of order, except when obstructions come through the water pipe. It may be easily adapted to any modern closet, and does not cost more than an ordinary first class fixture. Furthermore, where there are a number of closets in a building, the water may be easily shut off from any one of them without interfering whatever with any other. Its worth has been shown in the satisfaction experienced from the installations in the C.P.R. Hotel, Winnipeg, the Inglis Block, Montreal, the Boniface Hospital, Manitoba, the new Notre Dame Hospital, Montreal, and other large structures.

Of our illustrations, figure 1 shows the general external appearance of the valve, fig. 2 gives a sectional view of the valve connected to an ordinary closet, and fig. 3 is another sectional view, showing the mechanism of the valve. By referring to fig. 3, the contra-hydraulic principle of the valve will be more easily understood.

Fig. 1—Exterior of Nethery Valve.

The valve chamber "B" is filled with water, the pressure of which, acting on the upper surface of the piston "A" is almost twice that of the water acting on its lower surface. Consequently, the normal position of the piston is resting on its seat "V." But, when the button "M" is pushed, the water contained in the valve chamber escapes through the cap "O" and down the by-pass "H," in the valve casing, into the discharge pipe "X." This releases the downward pressure on the piston, which then yields to the upward pressure. Upon the rising of the piston "A" to the top of the valve chamber, the pin "C" closes the valve "N," whereupon the upper valve chamber begins to refill, through the opening in the piston head. The rapidity of the filling of the upper valve chamber, and therefore the rapidity of the descent of the piston, and the quantity of water discharged at each operation of the valve, is controlled by the disc "D." By this regulating disc, practically any desired quantity of water up to fifteen or twenty gallons, can be drawn at each operation of the valve. In the descent of the piston, the closet flush is obtained while the piston is between piston ring "P" and the piston ring "R," passing the supply opening, and the refill is accomplished while the piston is passing the opening from piston ring "R" to piston ring "T," at which point of its descent the base of the piston has reached its seat "V," and the flow ceases.

From an economic standpoint, the most important advantage possessed by this valve, where a water meter is used, lies in the fact that no manipulation of the push-button will obtain a continuous flow and consequent waste of water. It will work perfectly, on any pressure, from five pounds up. The Nethery Flush valve may be seen in operation at the St. Catherine Street branch of the Robert Mitchell Co., Limited, Montreal.

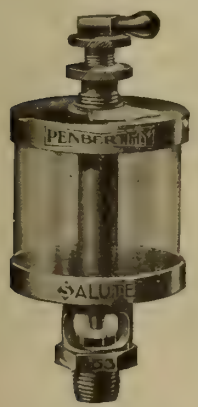
PENBERTHY BRASS SPECIALTIES.

SULTAN gas engine cylinder oilers, illustrated herewith, are manufactured by the Penberthy Injector Co., Windsor, who make a specialty of brass fittings such as back pressure oilers, stationary oilers, plain grease cups, automatic grease cups, unions, air cocks, etc.

The "Sultan" is made in sizes varying from 2 to 3 1-2 inches in diameter. One of the best features of this cup is the simple method employed in regulating the ball valve in the sight feed shank. All gas engine manufacturers know that the piston action in gas engine cylinders differs very materially. In small motor engines the piston moves very rapidly, where in large stationary machines the stroke is slow, and this variation occurs as the innumerable styles and sizes of gas engines increase.

After the female end of the shank has been threaded its whole length, a steel ball is dropped in and a regulating plug

screwed from the bottom, thus holding the ball in the chamber. The play that the ball has depends on the rapidity of the piston. The faster the explosions occur the smaller space should the ball occupy, and this regulating is simply done by taking a screw driver and giving



Silex Automatic Grease Cup.

the plug, which is slotted for that purpose, a turn or more as the case may be, thus lessening the play of the ball.

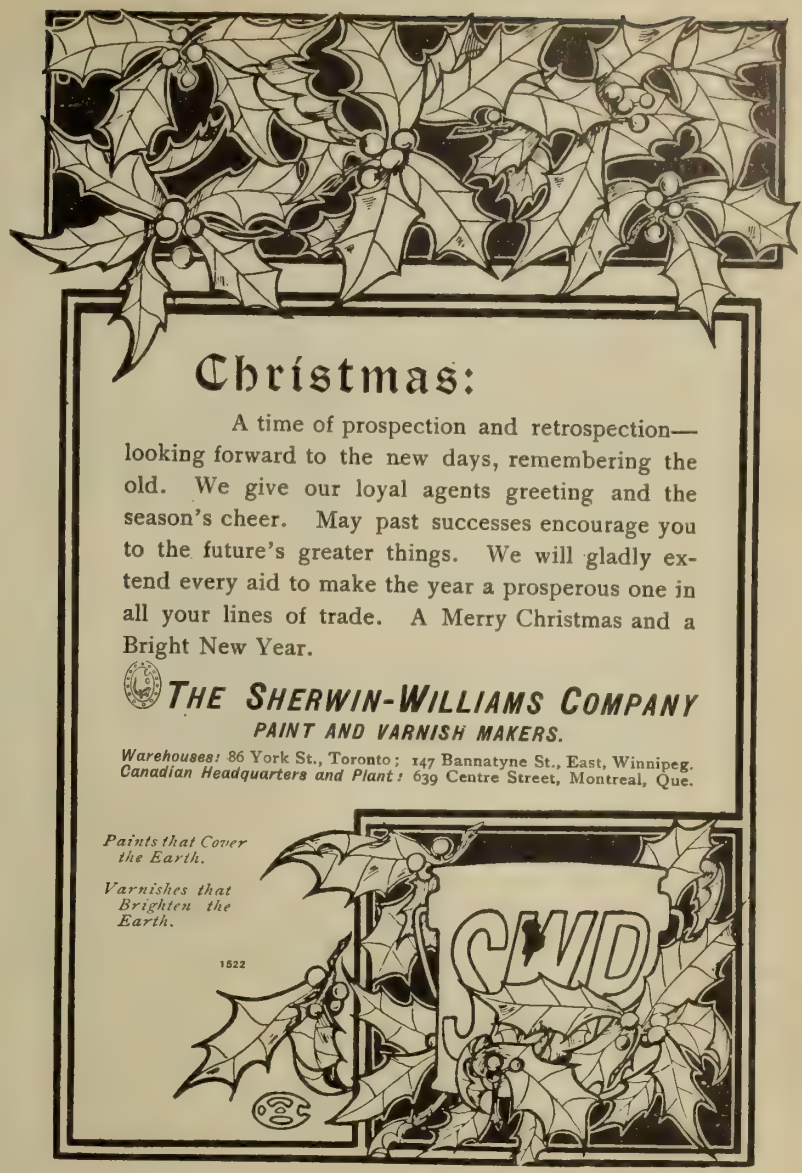
The top of the regulating plug is slotted in four sections so that when the ball drops on it there is ample space around for the oil to pass down. The sight feed glass is packed both top and bottom, and when the shank is screwed on the cup the glass is held secure, thus avoiding any possible chance of leakage.

From the body of the cup a pressure tube passes down along the centre through the base of the cup and directly into the sight feed chamber. This tube is so arranged as to take up any gas that may have escaped through the oil passage, and conveys it to the top of the cup thus creating more or less pressure, for unlike most other oiling devices this chamber must be perfectly tight. In the case of the "Sultan" the filler plug is fitted with a leather washer which absolutely prevents any leakage of oil

Salute Stationary Oiler.

Sultan Cylinder Oiler.

when properly screwed down. Another good feature in connection with the filler plug is the means taken to prevent its getting lost. A small wire, a couple of inches long, is looped at the one end, the other passing through the oil hole in the cover from the under side where it is fastened to the filler plug. Instead of fumbling with a loose plug and nine times out of ten losing it, one simply unscrews this and lets it hang suspended by the wire until the cup is filled, when it is put back without any delay whatever. The "Sultan" is fitted with a snap lever top which tells by its position in an instant if the cup is feeding or not. As it stands vertically it shows the oil feeding, and when turned horizontally the feed is shut off.



The metal used in making these oilers is the best red brass that can be made. It is claimed that the workmanship and finish is not surpassed by any other makers, and the careful engineer will find that the outcome of his experience with a Penberthy "Sultan" cup will be a perfect cylinder oiler.

Their "Salute" or stationary oiler is made exactly after the pattern of the "Sultan" excepting that it has no ball valve or pressure tube. It is so constructed that by putting the snap lever at an angle of 45 degrees the cup flushes, thus enabling the engineer to give a bearing an extra amount of oil at any time without disturbing the regular feed.

Their "Silex" automatic grease cup will be found to give less trouble and better satisfaction than other cups of its kind on the market. Made of red metal, highly finished, and the working parts carefully formed and assembled, the "Silex" grease cup will be found to be most economical and satisfactory for use by engine builders.

In making the particular styles of air cocks used by different gas engine builders, special care is taken in the grinding of those that are to be used for gasoline connection. These air cocks are also made from the best red metal and finished either brass or nickel-plated.

Readers of Hardware and Metal interested in these goods and manufacturers of gas engines and automobiles can secure copies of the Penberthy catalogue, describing these lines at greater length by mentioning this paper. A post-card will bring the book.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

CONDUCTOR PIPE ELBOWS.

A CATALOGUE devoted exclusively to conductor pipe elbows has been issued by Ferdinand Dieckmann, Cincinnati, Ohio. These elbows are manufactured under patents obtained in 1893, 1895, 1898 and 1901. They are made of six different materials, in many angles and sizes, and comprise 1,225 different varieties. These are manufactured in immense quantities, and the manufacturer certainly has an advantage in the purchase of materials in such large quantities. If you want to learn all about conductor pipe elbows, do not fail to ask for this catalogue, mentioning Hardware and Metal.

Cycle Skates.

Automobile cycle skates are illustrated in several styles in a small booklet issued by the Cycle Skate & Sporting Goods Co., 37 Park street, New York. The cover shows a skater defeating an automobile, the illustration being in two colors. This line should be a good seller in many districts, particularly in Pacific Coast cities. Mention Hardware and Metal when sending for one of the books.

The Fairbanks Standard.

The second issue of the "Fairbanks Standard" has been issued. It contains much interesting matter, and any dealer who desires to keep in touch with the Canadian Fairbanks Company should forward their name for a copy of the "Standard" to the Montreal office of the above company. Mention Hardware and Metal.

Electrical Supplies.

John Forman, manufacturer of electrical supplies, 708-710 Craig street, Montreal, has issued several illustrated catalogues descriptive of some of the goods he handles. Empire miniature lamps, for decorative purposes, are illustrated in all sizes, shapes, styles, etc., plain, frosted, and in all colors. A very handsome and convenient device is shown for obtaining the candle effect on fixtures fitted with standard sockets, by simply screwing it into the socket of the ordinary 16-candle power lamp. Any of the many styles of colored silk shades made for candles can be used. Illuminated signs and other lines are also fully described. Mention Hardware and Metal when sending for any of the catalogues.

Handsome Calendars.

Mackie & Ryan, hardware merchants, plumbers, etc., Pembroke, Ont., and T. McOuat, founders, machinists, hardware merchants, etc., Lachute, Que., have gotten out neat calendars of the hanging type, about twenty-four inches by twelve in size. On the calendars are reproductions of paintings by well-known artists. The designs are taking ones, and should secure for the calendars a prominent position on the walls of every customer's home.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any o the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

1161. A London firm in the oil trade has requested to be placed in touch with reliable firms connected with oil wells and refineries in Canada.

1162. A Bradford firm wishes to develop trade in Canada in woollen and other yarns and also in tops, and is prepared to appoint suitable Canadian resident agent to handle their goods.

1163. A Midlands manufacturer of varnishes, paints, colors, dryers and greases is prepared to appoint resident Canadian agent.

1164. The manufacturer of a new patented post card album wishes to arrange with a Canadian firm to undertake the sale of this article.

1165. A gentleman is desirous of acting as agent for any Canadian firms exporting to Great Britain.

1170. A Japanese firm wishes to be put in communication with Canadian merchants with a view of importing Japanese wall paper into Canada.

1178. A London firm is prepared to represent Canadian manufacturers of office furniture, cabinets, files and also of wall papers suitable for the United Kingdom trade.

1180. A Birmingham firm wishes to buy sheet and pig lead.

1181. A Birmingham firm wishes to get in touch with Canadian firms open to sell pick handles.

1182. A Cradley firm wishes to buy clothes pins and broom handles.

1185. A Birmingham firm wishes to appoint an agent in Canada for the sale of electroplated wares.

1186. A large firm in Birmingham wishes to appoint an agent in Canada for the sale of their trowels, augers and bits.

1188. A Birmingham firm wishes to appoint an agent in Canada for the sale of their brass fenders, fire-irons, etc.

1189. A Birmingham firm wishes to find an opening in Canada for the sale of incandescent gas mantles.

1190. A large Walsall firm wishes to find a market in Canada for all kinds of saddlery goods.

The Canadian Niagara Power Company has applied to Washington and Ottawa for permission to string cables across the Niagara River for the transmission of electrical energy from Fort Erie to Buffalo. The request is now under consideration by the Canadian section of the International Waterways Commission, but will not be ruled on by this body until the commissioners have consulted the Minister of Public Works. It is for the Government to say whether there is any objection to the idea of exporting power to the States that has been generated on our side of Niagara.

PAINT, OIL AND BRUSH TRADES

THE LIFE OF PAINT.

PAINT-MAKING is not a mere mixture of solids and liquids, but a scientific process involving technical knowledge, skilled labor and expensive and powerful machinery, says Paintographs. Herein we hope to make plain why linseed oil is used as the principal vehicle or thinner in paints, and point out briefly how its value may be lessened or destroyed.

Good paint is made chiefly of linseed oil, in which solid coloring matter or pigments are ground—not simply mixed. The pigments serve a triple purpose—they thicken the paint (oil alone would run off); they beautify surfaces, and protect the oil from the sun and rain. Turpentine, driers and some other materials are added to paint for specific purposes, but they have little or no value as paint.

Linseed oil is so important a part of paint, that it is often called "the life of the paint." It may well be so regarded for just as long as the oil lasts the paint has life. When the oil from chemical action or long exposure is no longer present, the paint is dead. Dead paint—a lustreless, dry, chalky coating—has no protective qualities, and disintegrates rapidly, the pigments having no cohesive attraction, after the departure of the oil.

The property which gives linseed oil its peculiar paint value is that it absorbs oxygen from the air when it is exposed in thin films, as in painting. This film, from oxidation, begets the valuable properties of being practically neutral in its reactions, more or less transparent, and quite elastic. The property of absorbing oxygen is increased by heating linseed oil, and is still further increased by adding to the oil, while it is being heated, certain bodies known as driers. While boiled oil dries more quickly than raw oil, and leaves a more lustrous surface, the film is less elastic, and liable to crack.

Anything added to the paint to unduly hasten its drying, will destroy the elasticity and toughness of the oil film. Therefore, all driers should be used sparingly and with caution.

Furthermore any pigment, chemically active, will not make an enduring paint. If used at all, it should be in combination with more stable or inert pigments, to neutralize as far as possible its chemical activity.

It is chemical activity that lessens to a marked degree the value of white lead as a paint pigment. Strictly pure white lead carries but little oil, and the little it does carry soon ceases to be linseed oil, by reason of the chemical change that takes place when the lead and oil are united and exposed to the elements. To correct this serious defect in the lead and oil mixture, modern paint-makers have added various pigments in varying formulae, and years of experience have proven that of these combinations, those carrying the greater amount of oil make the better paint, when they have good opacity or covering qualities.

CANADA PAINT CO.'S BANQUET.

ON Thursday evening of last week the St. Lawrence Hotel was the scene of a jolly informal banquet, given by the travelers and officials of the Canada Paint Co., Montreal.

Promptly at 6 o'clock seats were taken at the tables and after the hungry looks had disappeared from all the faces at the table, Mr. H. W. Aird, treasurer of the company, who acted as toast master, in the absence of Mr. Robt. Munro, the managing director, proposed the health of the King, which was drunk with enthusiasm. Mr. Craig astonished his friends by the ability he displayed in leading "God Save the King." Mr. W. H. Evans then proposed a toast to the Canada Paint Co., which, he said, was a kind of alma mater to those present. Response was made by Mr. Aird and Mr. Allan Munro, the former of whom announced that 1905 had been the record year in the company's business, reading figures which spoke volumes for the management of the company and for the prosperity of the country. Mr. Allan Munro, who spoke on behalf of his absent father, was very warmly received. He told "the boys" that his father's health had greatly improved during his stay in the Old Country.

These were the only toasts of the evening, but before adjourning the emblem of the Mystic Order of the Elephant was presented to the representative of Hardware and Metal, who, in reply, thanked the gentlemen especially for their kindness in providing him with a trunk which he would use on his Christmas vacation.

Hutchinson Bros., Victoria, B.C., have installed an electric plant at the whaling station at Sechart, on Vancouver Island.

This Journal has three classes of readers. First, those who are already customers of ours; second, those who are not our customers but should be; third, the few left over from the above.

To you all we extend a hearty Christmas Greeting, and may the year 1906 be the most successful that has ever been.

The Imperial Varnish & Color Company Limited

TORONTO, Ontario, Canada

Straith's Decorative Enamel

A genuine enamel. Imparts a hard, lustrous, non-absorbent surface that remains bright and attractive. It is admirable from a sanitary standpoint. Adapted to Woodwork, Furniture and Earthen and Metal Ware of all varieties. The colors of this enamel harmonize nicely with draperies, etc.

To be had in nineteen colors, every one a salable line. Have you a copy of our Catalogue?

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, December 22, 1905.

STOCK-TAKING is the order of the day in the local paint houses. Travelers are all off the road, and shipments are, naturally, few and far between. The manufacturers generally are well satisfied with their year's business and are making plans to branch out more widely in 1906.

But one change in price has been recorded, this showing an advance of 1c. on linseed oil. All other lines are strong and at the same prices as before.

Linseed Oil—We are quoting this week an advance of 1c. Price is now: Raw, one to four barrels, 47c.; five to nine barrels, 46c.; boiled, one to four barrels, 50c.; five to nine barrels, 49c., f.o.b. Montreal, net 30 days.

Turpentine—Conditions are this week the same as last, no further decline having taken place. We are still quoting: Single barrel, 93c. per gallon. Two barrels or over, 92c. For smaller quantities than barrel, 5c. extra per gallon is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Ground White Lead—Our quotations are as follows: Best brand Government standards, $5.65 to $5.80; No. 1, $5.40 to $5.55; No. 2, $5.05 to $5.30; No. 3, $4.80 to $5.05; all f.o.b. Montreal.

Dry White Lead—Prices are: Barrels, $5.40; 100 lb. packages, $5.65; 6 to 10 lb. tins, $6.65.

Dry White Zinc—We quote as follows: Pure dry in casks, 7 1-2c.; in 100 lb. kegs, 8c.; No. 1 zinc in casks, 6 1-2c.; in 100 lb. kegs, 7c.

White Zinc (ground in oil)—We quote: 25-lb. irons, 8c. to 10 1-2c.; No. 1, 6 3-4c.; No. 2, 5 3-4c.

Putty—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—The local market remains steady, with prices unchanged, in spite of advances to importers. We are quoting as follows: Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—We quote: Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75; and smaller quantities, $5.50.

Gum Shellac — We still quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

Shellac Varnish——The demand is fair for the season and prices are well maintained. We quote prices as follows: $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

Mixed Paints—Our prices are from $1.20 to $1.40 per gallon.

Castor Oil—Recent advices from India state that as the result of a drought there, the crop will probably be short and this article is likely to be considerably higher in the near future. In the meantime we are quoting: 7 1-2c. to 8 1-2c., according to lots.

Refined Petroleum—We still quote: American water white, 16 1-2c. and 17 1-2c.; Canadian prime white, 14 1-2c. and 15 1-2c.; 18 1-2c. and 19 1-2c. ex warehouse.

Window Glass—Bookings have commenced in the east and are about of normal volume. The probability is that the existing prices will remain unchanged until next Spring. The market is at present very firm at the following prices: First break, 50 feet, $2.10; second break, $2.20; first break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6,50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24.00, and twelfth do., $28.50.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Dec. 22, 1905.

LINSEED oil is advancing in all markets owing to firmer conditions in England and the higher prices asked for seed in India. As frost is said to have injured the seed in Argentina there does not appear to be much prospect of cheaper oil being on the market during the Winter. This will benefit the Canadian crushers as well as the farmers who have seed to sell. Quotations range from 49 to 52 cents for raw in single barrels and 52 to 55 cents for boiled in the same quantities.

Turpentine is still quoted at last week's figures, but a rise of 4 cents is reported from the south where the "Big Four" are said to have bought up all opposition and now control the whole present output. This development of the past week is likely to hold up prices

for rosin and turpentine until new stock can be procured next Spring. Rosin will likely revert to its former high figures if any credence can be given this report.

Business for the week before Christmas has been quite satisfactory.

White Lead—Ex Toronto, pure white, $5.80; No. 1, $5.37 1-2; No. 2, $5.00; No. 3, $4.25; No. 4, $4.50 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 1-2 lb. packages; genuine dry white lead, in casks, $5.25.

Red Lead—Genuine in casks of 560 lbs., $4.75; ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V.. M., in casks, $6.50: in 25 lbs., $7.50; in 12 1-2 lbs., $8.00; Lehigh, in casks, $5.50; in 25 lbs., $6.00; in 12 1-2 lbs., $6.50.

Shingle Stain—In 5-gallon lots, 57 to 90c. per gallon.

Paris White—90c. to $1.00 per 100 lbs.

Whiting—60c. to 65c. per 100 lbs.; Gilders' whiting, 75c.

Paris Green (for 1906)—We quote as follows: Barrels, 600 lbs., 15 1-4c. for Canadian Government standard, to 15 3-4c. for Berger's English; kegs, 250 lbs., 15 12c. to 16c.; drums, 25 lbs., 16 1-2c. to 17c.; drums, 50 and 100 lbs., 16c. to 16 1-2c.; 1 lb. packets, 17c. to 17 1-2c.; 1 lb. tins, 18c. to 18 1-2c.; 1-2 lb. packages, 19c. to 20 1-2c. per pound. Terms, 2 per cent. off on Berger's English.

Shellac Varnish — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 49c. to 52c.; boiled, 52c. to 55c.; 5 to 9 barrels, raw, 48c. to 51c.; boiled, 51c. to 54c. Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine—Single barrel lots, 95c. f.o.b., point of shipment, net thirty days. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c., and 10-gallon packages 80c. will be charged.

Glues—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels, $1.65 to $1.75; pure linseed oil, $2.00 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2.00; 100-lb. kegs, 25c. extra.

Plaster Paris—New Brunswick, $2.00 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.00.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

Crude Petroleum—Prices continue unchanged. We quote: Canadian, $1.36; Pennsylvania, $1.61; Ohio, 94c.

THE LEAD SITUATION.

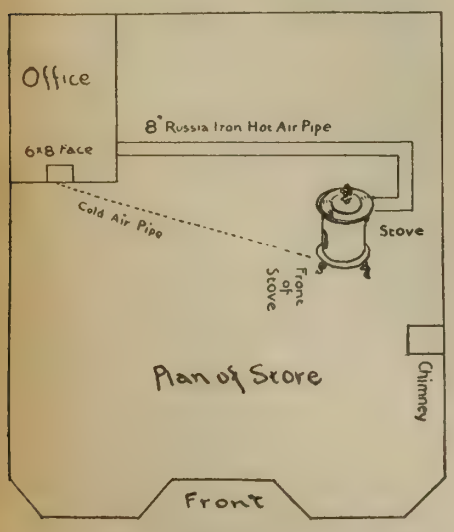
SEVERAL adverse circumstances have combined of late to bring about the recent advance in pig lead and to put lead consumers in a position of great uncertainty as to the future of the market. As the new year approaches, it becomes of the utmost importance to know what supply of lead may be relied upon and about what prices are to prevail, so that the cost and the selling price of lead products may be determined in advance for as much of the new year as possible.

The present uncertainty on this point is the occasion of no little inconvenience to the white lead trade, among others, and especially to large users of the lead pigments. The trade has been accustomed to a fairly steady lead market, but at the rate of change that has prevailed of late there is no telling what 1906 may bring forth in this important staple. The cause of the advance is the falling off in production as compared with increased demand. In other words, as stated by a contemporary, lead consumption has overtaken the production of the metal, and the causes are various, says the Paint, Oil and Drug Review, which goes on to discuss the difficulty in securing sufficient lead in the Western States and Mexico and the likelihood of western smelters securing lead ores in British Columbia now that the Canadian lead bounty has been withdrawn. The article concludes: From this outline of the lead situation it is evident that there is more behind the present lead market than appears at first glance. It is not a matter of manipulation or control, primarily, but is the result of many circumstances, of which not the least important is the mining of the precious metals, as well as the lead ores. The present prospect seems favorable to continued firm and advancing prices for pig lead.

LARGE SHIPMENT OF PAINT.

Carter Brothers, hardware merchants, Picton, have forwarded Hardware and Metal a clipping from a recent issue of the Picton Gazette, showing that they are both large and shrewd buyers in view of the almost certain advance in mixed paints after the New Year. Carter Brothers read Hardware and Metal closely and state that they "do not know how they would get along without it." The item referred to, follows:

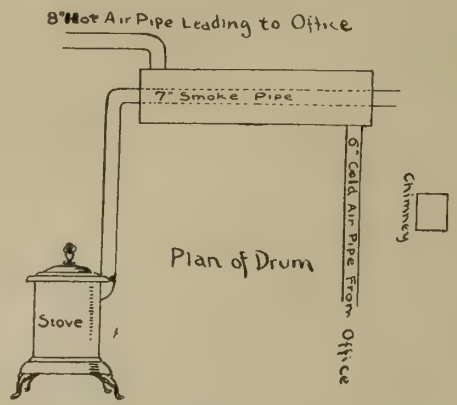
"Carter Bros. received per Str. Alexandria, on her last trip, one of the largest shipments of ready-mixed paints ever brought to Picton. It consisted of over 7 3-4 tons of Sherwin-Williams paints. Their first shipment last Spring by the same steamer, was 1 3-4 tons, and their shipments between times have amounted to two thousand three hundred and fifty-four cans, which all goes to show the wonderful popularity of this great paint.



STOVES AND TINWARE

HEATING A STORE.

STOVE and furnace men often encounter some interesting problems as to how best to properly heat stores and offices with stoves. Where to locate the stove and pipe in order to secure proper draft and comfortably heat the large area contained in the four walls of the store building oftimes requires close study.



The accompanying illustrations show a store in a Montana city sent to the American Artizan by a Butte stove merchant who asked for advice on how to improve the heating as shown in the plans and described as follows :

"The store is at present heated by a large Round Oak stove, which is ample to heat the building in cold weather with the exception of the office. The office is located in the extreme northwest corner of the building, being 7x10 feet in size, and enclosed by a glass casing, which only runs up 7 feet. There is an opening for a door but no door ; consequently some heat gets into the office, but in real cold weather it gets uncomfortable. The stove being a direct draft stove much of the heat goes up the flue. In order to save some of this heat we intend to enclose part of the horizontal pipe with a drum, bring the cold air from the office through a 6x8-inch register face and 6-inch pipe under the floor until we get the drum, connect with collar on one end by bringing 6-inch pipe through the floor ; on the opposite end will take an 8-inch hot air pipe and lead to centre of office. All the pipe will be of planished iron on account of tin pipe being colored from the heat. From floor to ceiling is 11 feet,

from top of smoke pipe entering chimney to ceiling is 2 feet, from centre of office to stove is 17 feet. We are in doubt as the glass casing surrounding the office does not run to the ceiling."

A correspondent in replying to the request for advice said the Butte merchant was trying to do the impossible, as the partition does not extend to ceiling and the warm air cannot be induced to descend to floor unless the room has a door, and partitions extend to ceiling. Neither will cold air be removed from floor of office, unless the space between base of stove and floor is

made almost airtight. This must be done and a 12-inch draw used, or it will be a failure. The better way would be to place a hot water radiator in office of sufficient size to heat it, and use a water attachment in stove, run the supply overhead and bring return pipe back under floor. The floor of office will then be heated instead of ceiling. This is on the supposition that the stove is at least 18 inches in diameter.

Has any Canadian heating man any similar problems to offer ?

THE WORLD'S RICHEST TIN MINE.

Mount Bischoff, the great tin mine of Tasmania, has by its last-declared dividend reached the $10,000,000 point in the distribution of profits. No other tin mine in the world can show even approximate results. In the Malay Peninsula there are enormously valuable deposits of the metal, but there is no Malay "mountain of tin," as Bischoff may be truly described. The mine was discovered about thirty years ago by a prospector known as "Philosopher" Smith. He sold it in Launceston, the principal town in the north of the island and there the stock is mostly owned to this day.

WESTERN HEATING CONTRACTS.

Thos. Poole, hardware dealer in Baldur, has recently installed a Pease Economy furnace in a new four-room school in Baldur, plans of which were prepared by W. A. Elliott, architect, Brandon.

E. H. Johnson & Co., of Brandon, are installing Pease Economy furnaces in the Indian school near Brandon.

Cotter Bros., of Winnipeg, are busy installing the heating and plumbing in the new premises of the Bank of Hamilton in Moose Jaw. Specifications call for a Florence boiler.

A CINDER SIFTER SHOVEL.

A combined ash, cinder and coal sifter, and ash, coal and snow shovel is the latest invention to be put on the Canadian market. It is named the "Bonanza," the framework of the shovel being made of 18-gauge expanded metal while the bottom is a strong wire screen, enabling the operator to sift the ashes from the cinders inside the furnace pit. The Collins Manufacturing Company, 18 Adelaide street, Toronto, are the manufacturers. Write them for discounts and descriptive matter and mention Hardware and Metal.

NEW STOVE FOUNDRY.

Mantel coal grates and cast iron cook stoves are to be the two specialties put on the market during the coming season by the Whittaker Stove Works, Windsor, a young concern under enterprising management. Grey iron casting will also be made for the custom trade. In the past a large percentage of the mantel coal grates sold in Canada have been imported from the United States. The new Whittaker line, made in Canada, should, therefore, meet with a strong demand. Dealers in these goods are invited to write for particulars, mentioning this paper.

AGENCIES WANTED

We wish to represent manufacturers and provision dealers in Manitoba, Saskatchewan and Alberta. We have well established sales agents in every important town. At Winnipeg we have first-class warehouse accommodation. Interested parties are referred to The Eastern Townships Bank of Canada.

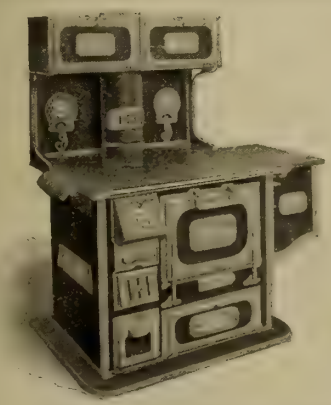
MONTREAL

A Convincing Opinion

Hartman Bros, Hardware Merchants, Midland, Ont., have this to say of

THE EMPIRE QUEEN RANGE



"In handling The Empire Queen Range, this last year, we find it a very quick stove to sell. It is giving good satisfaction to all whom we have sold to, and the demand for them is rapidly growing. Although we handle other different makes, we find **The Empire Queen** is taking the lead."

The merchants who sell **The Empire Queen Range** should be the best judges of whether or not it is the favorite range.

Think over the testimony here given. It's worth your consideration. **We have a Booklet.**

The Canadian Heating & Ventilating Co.
OWEN SOUND, Ontario Limited

THE CHRISTIE BROS. CO., Limited, 238 King St., Winnipeg, Man., Western Agents.
THE CANADA STOVE AND FURNITURE CO., 126 West Craig St., Montreal, Que., Agents for the Province of Quebec.

HAVING SHOWN THAT THE BODY OF

THE JOY MALLEABLE AND STEEL RANGE

is made of the best material for such work in existence, we now want to draw your attention to the **FIRE BOX** which next to the body is of first importance.

The **FIRE BOX** is long, narrow, deep and straight; lined with sectional iron linings and having **DUPLEX GRATES**, reversible for either coal or wood with the cogs on the outside of the body. Grate bars may be removed without disturbing the water front or linings.

Ashes will not adhere to the sides of the fire box—a turn of the grate gives a clean, bright fire.

Opportunities for securing the agency are growing less daily. Be wise.

THE JOY MANUFACTURING CO.
32 William Ave., - - TORONTO

AN IDEA THAT MADE A HIT.

IN Providence there were two rival department stores that made a valiant struggle for the business. They were located in the centre of the city on opposite corners at the junction of two busy thoroughfares. New advertising schemes were constantly devised by each. One day one of them put into operation a good thing. Beautiful and artistic moving pictures were displayed in the windows. The performance was given every evening and the street was thronged with people, who, after the display, crowded into the store of the merchant giving it. During the show they stood against the great windows of the store across the street, which was deserted all evening. The proprietor thereof suffered much uneasiness. He consulted the subordinates.

"I must do something. Blank is getting all the custom," he said.

"I have an idea I think might help us," an ingenious clerk responded. "The view of their place from our windows is admirable. Why not—"

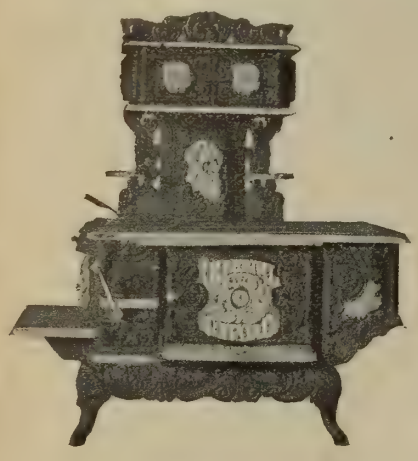
And an enthusiastic discussion among the proprietor and subordinates followed in which the clerks all participated. At its conclusion there was much chuckling and "Mr. Jones," the bright clerk, was patted on the back until he felt four inches taller.

Then there followed a great activity among the force and a ringing of telephone bells and summoning of mechanics. The next morning the raised curtains disclosed rows and rows of circus-like seats in the great show windows, from which all the goods had been removed, and the morning papers contained a big display advertisement reading:

"The beautiful art display given nightly in Blank's department store can best be enjoyed from our great show windows. We have arranged seats for you free. All are welcome. Come and see a truly meritorious performance."

And thereafter while the show across the street lasted the rival department store was busier evenings than a beehive.—New York Commercial.

The Breton Coal Company are preparing to develop their property at Port Malcolm, N.S. Their areas are extensive, embracing between twenty-five and thirty square miles.



PERMANENT SUCCESS

is the goal all business men make for. Various methods are employed to reach that goal—all more or less ingenious—but there is only one sure, reliable way of getting there.

The hardware dealer who handles ordinary, second-rate wares starts on the journey with a **no-through** ticket.

If you want permanent success in the hardware business, you must handle quality wares.

The Oxford lines are Quality lines. You can secure and keep the high-class range trade of your town by placing the

Imperial Oxford Range

on your floor.

The Imperial Oxford is the highest class cooking apparatus ever manufactured at any price, and our price places it within the reach of every housekeeper.

It has many advantages and improvements not found in any other range, and the commoner features of capacity and efficiency are more in evidence.

The Draw-Out Duplex Grate and Frame prolongs the life of the fire-box, because repairs can be easily effected without disturbing the linings.

The Diffusive Oven Flue, exclusive to this range, delivers a column of super-heated air into the oven and maintains an even temperature very pleasing to the most particular cook. The economy produced by this flue is readily apparent to all practical men.

The oven is full-sized and square.

The Fire-box is accurately proportioned, deep and straight.

The Imperial Oxford on your floor will do more to achieve permanent success for your establishment than any other article.

Send for Catalogue 61

WE also manufacture Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges, Warm Air Furnaces and all kinds of cooking and heating apparatus, Plumbers' Supplies.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

A FREIGHT special of 28 cars took the machinery and stock of the Henry K. Wampole Co., manufacturing chemists, from Toronto to Perth last Friday. Nearly 200 men will be employed in the new works at Perth.

The Canada Glue Co. has changed its headquarters from Toronto to Brantford.

A winding-up order has been made regarding the Carleton Foundry Co., of New Brunswick.

Stonehouse & Schuman have began the manufacture of broom handles at Collingwood Corners, N.S.

McGregor, Gourlay & Co., Galt, are advertising their factory building for sale, and may locate in another city.

Owing to a large increase in business the Canadian General Electric Co. are to erect a large warehouse at Montreal.

The Patent Roofing Company is being organized at Brantford, to establish a factory to manufacture roofing materials.

The Massey-Harris Co. have closed their branch at Stratford, and will remove the plant to Toronto, in order to centralize their business.

The new Banwell-Hoxie Wire Fence Co. have installed their plant on Princess street, Hamilton. The new company is capitalized at $100,000.

The B. C. Electric Railway Co. are to spend $36,000 for new rolling stock. All of the cars are being made at the company's shops at Vancouver.

An electrical transmission line is to be constructed from Copper Cliff to the new Craighton mine, and a power house is to be erected for the electrical machinery.

Portage la Prairie is to vote on the question of granting inducement to the London Wire Fence & Machine Co., who propose to erect a $30,000 factory in the west end of the city.

W. K. Vanderbilt inspected the Ontario Power Company's plant at Niagara Falls this week. the New York Central having decided to electrify their railway lines in Western New York.

Two by-laws have been carried at Winnipeg, one being to grant $150,000 to the hospital and the other authorizing the expenditure of $650,000 in building and equiping a municipal gas plant.

The Coal Creek coal mines, below Dawson City, will produce 4,000 tons of coal this Winter. The output will be hauled by the trains from the interior to the river and placed in the bunkers ready for shipment to Dawson early in the Spring.

The Eastern Coal Company, at Amherst, N.S., are to equip the mine with the most up-to-date machinery capable of turning out at least three to five hundred tons per day. There had already been upwards of 40,000 tons of coal taken out when the old slope was worked.

The Maritime Gasoline Engine & Supply Co. has been organized at Halifax, with a capital of $50,000, to deal in gasoline engines and power machinery. Agencies will be established in Newfoundland and the West Indies, as well as various places in the Maritime Provinces. Chas. Darlington, Halifax, is to be manager.

The Atlantic Grind Stone, Coal and Railway Co's. properties near Amherst, N.S., are to be still further developed. A new reef of superior grind stone has been uncovered and additional machinery is being installed. New buildings and machinery have also been erected in order to increase the output of the coal mine.

A few days ago water appeared in the Dominion Coal Co's. empty pit at the reserve mines, and now three pumps are engaged in reducing the quantity. About eight hundred gallons per minute are being taken out, and the water is now said to be under control, but it may be some days before normal conditions are restored.

An alliance of great benefit to the "Soo" industries has been formed between the Lake Superior Corporation and the Canadian Pacific Railway. The big railway is now getting over $100,000 a month for hauling the business of the different subsidiary companies of the Lake Superior Corporation. In return, the Canadian Pacific has become the largest and one of the most profitable customers of the steel rail mill of the Algoma Steel Company.

Eighty miles of track has been graded and forty miles of rails laid on the new Temiscaming and Northern Ontario Railway. Twenty miles more will be completed in the Spring, and the whole division in operation next Summer.

Twenty carloads of machinery for a 400 h.p. compresser plant has been shipped to Atikokan Iron Co., by the Canadian Rand Drill Co.; of Sherbrooke, Que. The plant is expected to be installed within three months, and active mining commenced.

There is talk of the starting of a steel rail mill in the Kootenay district of British Columbia. It is said that the iron mines, owned by G. B. McMillan and R. Robinson, of Nelson, on Crawford Creek, have been sold to a syndicate of Cleveland and St. Paul capitalists, headed by Matthias Horsling of Cleveland. The purchase price is in the neighborhood of $75,000, and the new owners will begin active opera-

tions on June 1 next. Their plans include the construction of a mono-rail line from the mines to Crawford Bay. The new properties will be operated in connection with steel works already in existence, either at the coast or in the east. The company propose to expend $150,000 next Summer in putting in rolls, and providing transportation facilities between the mines and the lake shore.

The machinery for the Atikokan Iron Co., Fort Frances, has arrived there, the outfit making a whole train itself, there being twenty cars in all. The four hundred h.p. compressor plant is being installed by the Canadian Rand Drill Co., of Sherbrooke, Quebec, and it is intended that active mining will have commenced within three months time.

The C.P.R. have decided to relay with new steel next year the entire Crow's Nest Pass line from Lethbridge to Kootenay Landing, a distance of 211 miles. The total contemplated improvements will cost $1,250,000. Each mile will take about 125 tons of rails, or say 26,375 tons for the entire distance. Each ton of rails will cost (exclusive of freight) $33, or $869,275. Labor will cost about $120,000, and the ballasting of the road for the new rails will mean an outlay of $211,000. Extra expenses of one kind or another will exhaust the appropriation of $1,250,000.

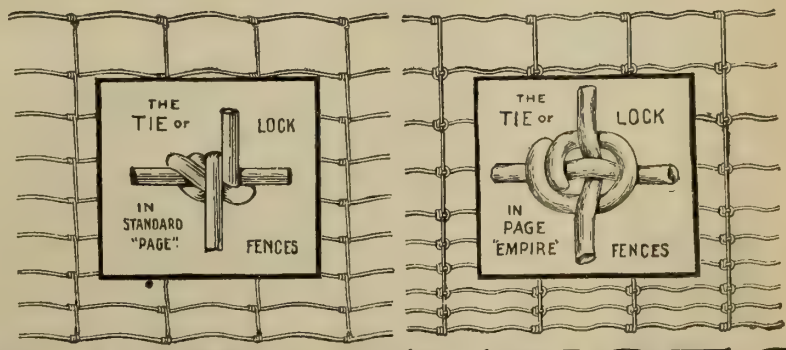
Conditions which are rapidly driving large manufacturing interests from the United States to Canada are to be considered within a few days by the Illinois Manufacturers' Association. Reports just gathered show that 132 of the leading concerns of the country have been obliged, chiefly on account to tariff restriction, to establish branch plants in Canada. The resulting loss financially is estimated at upwards of $50,000,000. The agitation which the Illinois manufacturers are about to start is expected to assume the form of a national appeal to Congress. The remedy most in favor locally and throughout the country provides for reciprocity legislation which will permit of a freer exchange of American and Canadian manufactured products. It is likely that Congress will be asked during the present Session to take some steps in this direction.

Vancouver's record of bank clearings has been for some time past a most encouraging one, and reflects the great expansion of trade in that western city. Not only is Vancouver showing great industrial expansion, but other British Columbia cities are having almost unprecedented prosperity. Mining, lumbering, timbering, fishing, fruit, dairy, general farming, and many other lines of production and manufacture are enjoying the greatest of activity. Vancouver as a shipping point is naturally growing in importance with the rapidly increasing trade with the Orient. This trade will give an impulse to every city on the Pacific Coast, and also to those a considerable distance inland. The increase in bank clearings of Vancouver is enormous, and for the past few weeks gives an average increase of almost fifty per cent. over the same period of a year ago. The last record published showed a thirty-five per cent. increase, the previous week was thirty-

SIMPLICITY

That's it. That's what characterizes

MODEL No. 23



THE HAMILTON RIFLE

Designed for ready use. No intricate contrivances to get out of order. No superfluous parts. Just a rifle made correctly, without a flaw, without one drawback. The price **Model No. 23** sells at is $3.50. Cheap enough—the cheapest rifle of the kind to be had. And yet for that $3.50 the buyer receives a rifle that is guaranteed against any imperfection of material or workmanship, a rifle for regular service, sure aim, constant satisfaction.

And have you let your jobber go by without asking him about **The Hamilton Rifle, Model No. 23?**

six per cent. in excess of the same week a year ago, and the four weeks before that time the increases were, respectively, twenty-six per cent, fifty-five per cent., sixteen per cent., and fifty-five per cent. There is a fair prospect—in fact, it is now assured—that Vancouver will at no distant date be a considerable factor in the flour-milling business. Already there are numerous projects in hand to look after the flour trade with Japan and China. The recent successful experiment in the cultivation of Fall wheat in Alberta has opened up several outlooks for profit to the more western province, all of which will reflect favorably on the business of Vancouver.

Companies Incorporated.

Economical Mfg. & Supply Co., Toronto; share capital $40,000; purpose, to manufacture and deal in engineers' and steam users' supplies. The directors are H. L. Brown, W. J. Boland, Samuel Behan and T. J. Walsh, all of Toronto, and W. H. Crow, of Welland.

Stinson-Reeb Builders' Supply Co., Montreal, share capital $20,000; purpose, to engage in the manufacture, etc., of cement, lime, bricks, sand etc. The incorporators are J. K. Stinson, E. H. Stinson, and F. J. Curran, of Montreal; J. A. Reeb, of Port Colborne, and H. W. Macoomb, of Welland.

Canadian Forty Mile Gold Dredging Co., Toronto, share capital $600,000; purpose, to carry on the business of a mining, milling, reduction and development company. The incorporators are J. S. Lowell, W. Bain, R. Gowans, E. W. McNeil, S. G. Crowell, W. F. Ralph, all of Toronto.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Metallic fittings for Post Office Department, Ottawa, Ont.," will be received at this office until Wednesday, January 3, 1906, inclusively, for the construction of metallic fittings for Savings Bank Branch, Ottawa, Ont., Post Office.

Plans and specifications can be seen and forms of tender obtained at this Department.

Persons tendering are notified that tenders will not be considered unless made on the printed form supplied and signed with their actual signatures.

Each tender must be accompanied by an accepted cheque on a chartered bank, made payable to the order of the Honourable the Minister of Public Works, equal to ten per cent. (10 p.c.) of the amount of the tender, which will be forfeited if the party tendering decline to enter into a contract when called upon to do so, or if he fail to complete the work contracted for. If the tender be not accepted the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

By order,

FRED. GELINAS,
Secretary.

Department of Public Works,
Ottawa, December 21, 1905.

Newspapers inserting this advertisement without authority from the Department will not be paid for it. (52)

WANTED—To buy a small established hardware business, Ontario preferred. Write Box 80, HARDWARE AND METAL. [52]

STOVE MANUFACTURERS

IF you intend opening up a branch in Canada for the manufacture of stoves, it will be to your interest to communicate with A. B., Room C, Confederation Life Building, Toronto. [52-2]

BUILDING NOTES.

J. K. Fleming, Hartland, N.B., is fitting up a lathe manufacturing plant.

E. J. Lepatroul, Hamilton, is erecting a brick dwelling to cost $1,900.

The Morris Implement Co., Winnipeg, are to establish a branch and build a warehouse at Regina.

The Newville Lumber Co. are rebuilding near Parrsboro, N.S., which was recently destroyed by fire.

The Maple Leaf Milling Co. contemplate building a mill between Keewatin and Kenora next Summer.

In addition to a new depot at London the Grand Trunk are intending to build new freight sheds next Summer.

W. W. Lachance, Regina, is preparing plans for a new four-storey hotel building to be erected at Regina.

The Galt Wagon Works Co. are to enlarge their plant. A site has been secured and new buildings are being planned.

Mr. Hannah, a farmer at Griswold, Man., has purchased a site at Brandon and will erect a large hotel there next Summer.

The J. D. Duncan Milk Co. has purchased a site in Montreal, and will erect a three-storey brick and stone building, to cost $50,000.

Plans are being prepared for two business blocks to be erected at Fort William next year, to be erected by Messrs. Hitchcock & McGregor.

P. McCulloch, Hamilton, is to build two brick houses to cost $2,600; John Slater two more to cost $3,000, and Roy Isbestor one to cost $3,000.

The Canada Cycle and Motor Company have started work on the erection of a brick building for manufacturing automobiles at Toronto Junction.

F. B. Robins, has purchased 140 acres of land at Hamilton and proposes to dispose of part of it for manufacturing sites, and build residences on the remainder.

New Hampshire and Massachusetts capitalists have secured 30 square miles of timber lands in British Columbia, and will construct a large saw mill near Vancouver.

A $50,000 steel and concrete bridge will be erected over the Bow River at Calgary, by the Alberta Government. A Normal School, to cost $60,000, will also be erected at Calgary.

The Grand Trunk Railway Co. have announced that they intend to spend $6,000,000 on a new station, to be erected in Montreal. The tracks are to be elevated and other improvements made.

Heintzman & Co., Toronto, have purchased a site on Yonge street, where McDonald & Willson's stove store now stands, and will erect a ten-storey building, which they will use as piano warerooms. The site cost $120,000, being at the rate of $3,000 per foot. McDonald & Willson have the right to remain in their present store for three years longer.

THERE IS NO FEATURE

In the sale of an article that inspires the dealer to recommend, and induces the customer to buy, equal to the merit of the article itself. As one knows a true friend from long acquaintance and association, so it is that stock in trade that has stood the test of time is recognized as something safe to invest in.

CHURCH'S

ALABASTINE

Is a **PERMANENT** and **SANITARY WALL-COATING**, that **hardens with age.** Has been on the Canadian market and made in Canada for more than twenty years. Is extensively sold and persistently advertised. Sells without effort and affords a good margin of profit. The country is full of cheap kalsomines, foreign made; but what does it profit a dealer to sell them and lose his reputation for dealing in only first-class articles?

ALABASTINE is **NOT A KALSOMINE.** We make **JELLSTONE, which is a Kalsomine,** and in point of merit as such has no competitor, If you **must have a temporary coating,** stock **JELLSTONE** which is Canadian-made goods. **ALABASTINE** satisfies the customer, and a satisfied customer is a splendid advertiser. **PUSH ALABASTINE.**

Look up your **ALABASTINE** stock. Do it this fall. Order now, from jobber or manufacturer. Spring dating.

THE ALABASTINE CO., Limited, - - Paris, Ont.

"Made-in-Canada"

We are making cylinder locks right here in Canada—stable, salable, reliable, fully-guaranteed locks.

You are perhaps selling American locks, because you think there is a greater call for them. Make no mistake! The call is for "Made-in-Canada" goods.

Gurney Cylinder Locks

have nothing in common with the shoddy American locks. They are honest-made, honest-price locks.

The building trade round about you is something worth catering to. If you will write for **Catalogue No. 7** and **Supplements**, you will see why other Hardwaremen believe that **Gurney Cylinder Locks** are the locks builders want.

PLUMBING AND STEAMFITTING

THE CONSPIRACY TRIALS.

ON Tuesday the conspiracy trials of members of the various plumbers' organization were continued, the joint charges against 156 individuals being proceeded with after the case against Mr. James Hardy, secretary of the various hardware associations, was enlarged to the 28th instant. Secretary Meredith was in the witness box all Tuesday and Wednesday morning, Crown Attorney Curry taking up the membership roll of the Master Plumbers' Association from A to Z, and proving through the secretary the activity and knowledge of each individual as to the workings of the association.

* * *

"Was John Jones a member of the association in June, 1905?" "Did he take the obligation in October, 1904?" and "Had he a general knowledge of the workings of the association?" were questions asked by the Crown Attorney as each name was considered, and if a person was shown to have been a member and to have had an opportunity of attending the meetings and making himself conversant with the doings of the organization the charge against him was pressed. In some cases, however, names of plumbers already fined, who had acted as witnesses in previous cases, or for other reasons, were considered as not being deserving of punishment, and the charges against these were withdrawn. Of the original 156 about 40 were fortunate enough to go free, a list of these including Messrs. Fred. Armstrong, Robert Ross, James H. Wilson, J. J. McKitrick, and Geo. H. Cooper, already fined; S. J. Greer and J. M. Haydon, witnesses in the Assize Court trial: Alex. Fiddes, dead; J. E. Gray, who was expelled from the association; A. J. Hutchinson, who was only a short time a member and resigned to take a Government position; Alfred Richards, Jas. V. Fullerton, Jas. T. Power, Chas. Robertson, F. Gates, W. J. McGuire, W. J. Macnamara, Herbert Johnston, F. J. Nixon, J. W. Oran (deceased), W. Parmenter, Alex. Purdy, P. Mansell, Wm. Bush, Henry Drummond, W. B. Malcolm, Jacob Raine, J. H. Thorn, W. M. McConnell, H. Tweedy, and James Westwood.

* * *

The most interesting feature of the proceeding was the cross-examining of Secretary Meredith by John J. Power, of Power Bros., who said he had difficulty with the association in June, 1904, and decided to withdraw. Finding, however, that he would have difficulty in securing supplies, he allowed his name to continue on the list without taking any part in the workings of the association. Mr. Power said he had resigned and had endeavored to defeat the association in any possible manner. This came as a surprise to association members, but it failed to secure the withdrawal of the charge against him.

Another point brought out was the statement of Secretary Meredith that the association was still in existence, although no meetings were being held, no moneys being received or contracts being tendered upon.

* * *

On Wednesday afternoon Secretary Morris, of the Central Supply Association, was put in the box, and the various supply men charged with conspiracy had their cases considered individually, the charges against Messrs. W. C. Gurney, L. L. Anthes, J. M. Taylor, and A. Saunders being withdrawn, the court adopting the rule throughout the trial that where two members of one firm were charged only one would be proceeded against, unless both were equally active. Messrs. A. W. Mann and T. A. Stevens, of London, were also relieved because of giving evidence in previous cases.

* * *

One effect of the trials for conspiracy is that master plumbers are finding it difficult to collect outstanding accounts. One firm in Toronto, Messrs. Harrison & Robertson, who have about $10,000 on their books, state that since Mr. Harrison's conviction, customers are refusing to pay their bills and fully $1,000 is already considered uncollectable unless legal action is taken. This will be done and every customer disputing his account will be sued. In this firm's case the situation is peculiar, as in August last Hardware and Metal announced that Mr. Harrison had resigned his offices in the association. After endeavoring to have an internal investigation and the methods used by the larger concerns in taking business away from their smaller competitors, Mr. Harrison sent in his resignation as a member of the association and paid no further commissions into the organization. Had he desired he could have freed himself from prosecution as others have done, but in the general interest of the trade he allowed himself to be convicted for wrong doings which he had fought inside the association. It is unfortunate, therefore, that his collections should be stopped and the necessity of suing customers forced upon his firm. Other master plumbers heard from are not so firm in their position, cases where customers having come in and offered to pay $8 for a receipt in full for a $10 account having been heard of, the master plumber being unwise enough to accept the offer, thus practically acknowledging his guilt.

* * *

The life of the association does not seem nearly so secure also, as it is now the general opinion that the trade will revert back to the disorganized condition of cut-throat competition of a few years ago. Members of the trade are accepting this view with little thought of what it means, and with no apparent intention of trying to avert the calamity. And a calamity it will be to allow the organization to disband altogether. Before the association came into existence nearly every master plumber in Toronto, outside half a dozen large firms, was rated nil in commercial reports, each owing from $100 to $10,000 to the supply houses, according to the amount of business done. Business was often taken for less than the cost of material and labor, and few bosses earned as much as the journeymen they employed. Surely another such era is not a pleasant prospect to look forward to! A few men talk of retiring from business rather than wear their lives out in such a struggle. Even under the conditions brought about by the association, the smaller firms found it difficult to exist in the fierce competition of their stronger competitors. The thing to do, if after the trials are completed there are any left with stomach enough to tackle the job, is to re-organize the association on a basis which will meet every requirement of the law. But what will be done is a matter to be decided when the cases are concluded. The trade throughout the province will watch future developments with interest.

The Tack "Combine."

Informations have been sworn out charging "that James Hardy and Thomas Jenkins, both of Toronto; E. J. Fry, J. Mowat, J. C. Robertson, W. Bruckoff and E. Perkins, of the Portland Rolling Mills Co., St. John; H. M. Blacklock, W. H. Woodall, J. R. Kinghorn, A. H. Huff, W. McMaster and A. F. McPherson, Montreal Rolling Mills Co., Limited, Montreal; F. W. Knowlton, United Shoe Machinery Co., Montreal; F. H. Whitton, the Ontario Tack Co., Hamilton; Jas. H. Peck, T. Edmund Peck, W. T. Cumming, E. T. Sinclair and M. A. Irwin, of Peck-Benny Co., Montreal; Jas. Pender, St. John; W. W. Near, the Pillow Hersey Co., Guelph; G. Boyd, G. A. MacAgy and R. Hersey, Pillow Hersey Co., Montreal; in the years of our Lord, 1892, 1893, 1894, 1895, 1896, 1897, 1898, 1900, 1901, 1902, 1903, 1904 and 1905, at the city of Toronto, did conspire, combine, agree and arrange, the one with the other, and others of them, and with the Portland Rolling Mills Co., Peck Benny Co., Pillow Hersey Co., Montreal Rolling Mills Co., the Ontario Tack Co., the United Shoe Machinery Co., Jas. Pender & Co., and W. T. Woodall, and other persons and corporations to the complainant unknown, to unduly limit the facilities for producing, manufacturing, supplying and dealing in tacks."

The trial will not commence until the 28th, as so many of the witnesses will have to come from a distance.

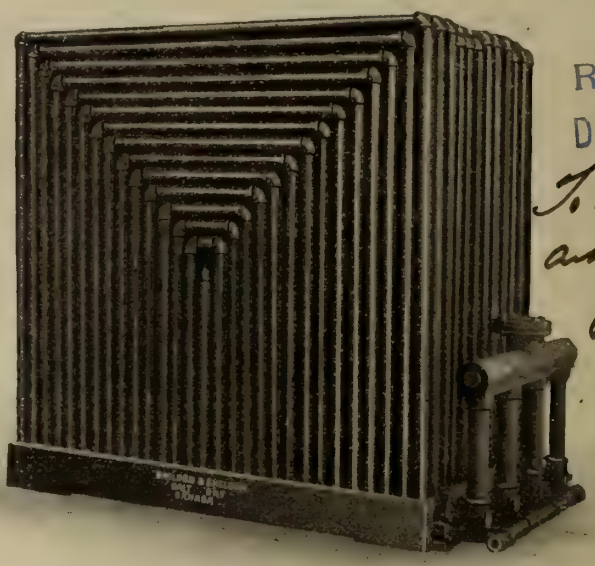
FACTORY HEATING.

By S. R. Sheldon, of Sheldon & Sheldon, Galt, Ontario.

AMONG the many marked improvements in manufacturing methods which have been called to the minds of the public, one of the most striking advances has been made in the heating and ventilation of factories, mills, and other large buildings. More attention is continually being devoted to obtaining the best means of maintaining a healthy atmosphere in the factory, and naturally the problem becomes more difficult in many instances, owing to overcrowding and the increase in vitiation due to the process of manufacture.

Evolution of Systems.

The old wood stove of our grandfathers was superseded by the hot air furnace, the furnace by direct radiation with either hot water or steam, and now direct radiation is discarded for a combined system of heating and ventilation obtained by a forced circulation of warm air. This system is what is known as the "Fan or Blower System," and comprises a fan, or blower, usually of the centrifugal type, a heater, and a system of distributing ducts or pipes more or less extended according to the conditions of each individual installation. In ordinary practice the fan wheel is enclosed in a steel plate case, or "housing," as it is usually called, and is arranged to draw air through a steam heating coil constructed with closely spaced pipes. From the fan the air is discharged into the distributing ducts, which deliver the air to the desired points within the building.



When a building is heated by direct

RETURNED DEC 27 1905

Fig. 1

radiation with steam pipes strung along the walls, the wall itself close to the heating surface is maintained at a comparatively high temperature, so that the temperature difference between it and the external air is great, and a rapid loss of heat is the result. With the direct radiation suspended from the ceiling the loss is somewhat less, but still of considerable magnitude. With the low air velocities resulting from the natural circulation of the air across such direct heating surfaces, the hourly condensation per square foot of surface with low pressure steam is only about .3 (3-10) of a pound of steam. As the velocity of the air across the heating surface increases, so does the rate of condensation of the steam and of the heat transmission. It is, therefore, evident that the heating surface required to transmit a given quantity of heat may be decreased in proportion as the velocity, and consequent volume, of air passing across the surface are increased.

Fig. 2

Fan and Blower System.

In the hot blast system the heating surface is massed in one location, a decided contrast to the almost unlimited extent of pipe required for a system of heating by direct radiation. This massed surface is usually made up in sections, each consisting of a cast iron base with suitable partitions or diaphragms, so arranged that the steam, admitted at one end, passes up, over, and down a series of steam pipes (as shown in Fig. 1), and finally escapes in the form of water of condensation from an outlet immediately below the point

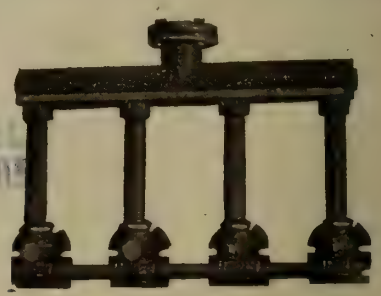

Fig. 3

where the steam enters. These sections are put together in groups (Fig. 2) and the inlets and drips of several sections are connected together by means of cast iron headers (Fig. 3), the heating effect with constant air velocity being proportionate to the depth of the heater. The more rows of pipe across which the air must pass, the higher is the resultant temperature. This massing together of the heating surface eliminates the constant danger of the pipes freezing and of damage from leakage as well as from fire where high pressure steam without

proper insulation is employed. Insurance rates may thus be reduced and convenience secured in the control of the temperature throughout the building.

The design of the fan must depend largely upon the conditions of each installation. As usually constructed, it can be arranged to discharge in any given direction, and may be built either with a full casing or with a portion of the scroll formed in the brick foundation. This latter is known as the three-quarter housing type. The fan wheel is constructed as shown in Fig. 4. The hub of the wheel is of cast iron, cast around steel tee arms, to which are firmly rivetted the blades, to the edges of the blades are rivetted the side plates which stiffen the construction of the wheel. The shaft is of steel, carefully turned and polished, and the bearings are of the self-oiling, self-aligning type, capable of running an almost indefinite time without attention.

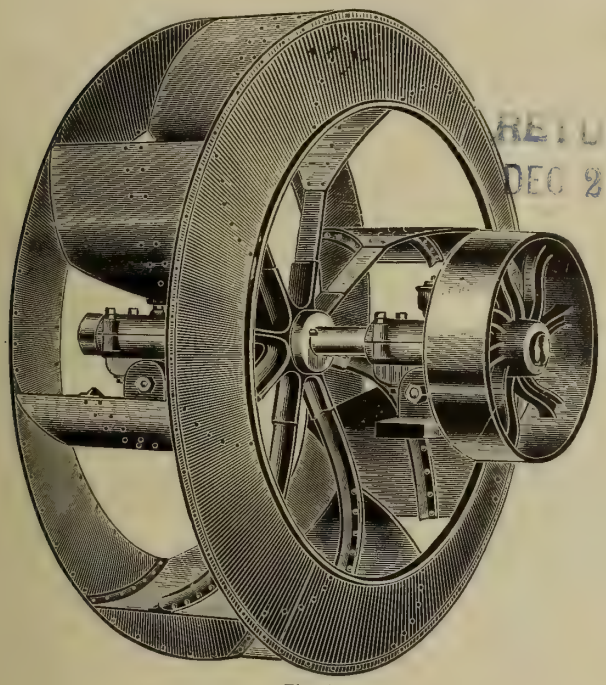

Fig. 4

Fig. 5

In Fig. 5 is illustrated a full housed steel plate fan, up discharge, as used for this system of heating, and in Fig. 6 is shown a three-quarter housing fan with direct connected engine, the inlet of fan being connected to the heater. This engine-driven fan makes the most convenient arrangement, as the heating system is thus rendered entirely independent of any other source of power and may be started up at any time. This is particularly desirable in the matter of heating up in the morning, or for continuous operation during the night.

From the fan outlet the air is conducted by galvanized iron pipes or underground brick ducts to its proper destination. In the ordinary type of factory heating, such as a foundry, boiler shop, or machine shop, the usual and most efficient arrangement is secured by extending the galvanized iron pipes overhead and almost entirely round the interior of the building, outlets being provided at regular intervals so that the air is discharged outward toward the walls and slightly downward. A barrier of warm air is thus maintained along the outer walls of the buildings, which prevents any bad effects from the cold walls, and provides ample circulation and ventilation. The usual inward leakage of cold air through cracks and crevices is prevented by the fan keeping a constant pressure in the building. All the outlets from the galvanized iron or underground hot air ducts should be arranged with dampers or blast gates (Fig. 7) so that any or all of them can be shut off at will.

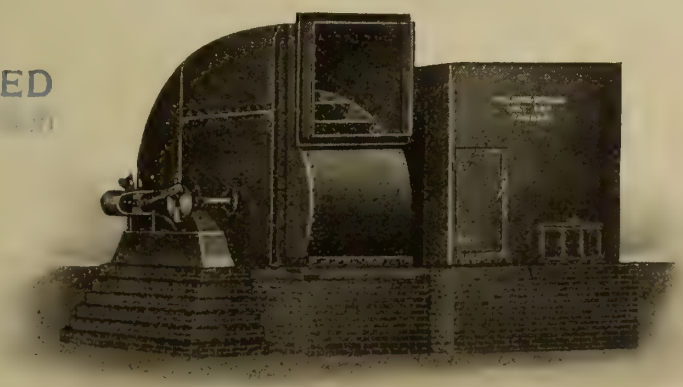

Fig. 6

The ordinary type of heater uses exhaust steam, but it can be so arranged that if necessary in very cold weather additional heating power may be secured by admitting comparatively high-pressure steam to one or more sections across which the air of highest temperature passes. This can be arranged by inserting valves in the connections shown in Fig. 3.

The actual cost of operation of an engine-driven fan is very slight, for the exhaust steam can be utilized in the heater, the steam by passing through the engine only losing about 10 per cent. or 15 per cent. of its heat efficiency.

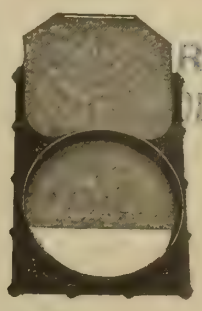

Fig. 7

In the ordinary hot blast piping system allowance must be made at all turns and branches for the resistance these offer to the air. As a rule the total area of the outlets should range from 25 per rent. to 40 per cent. in excess of the area of the outlet of the fan. The entire air supply can be taken

from outside, or during the coldest weather, the air may be returned from the building itself in any desired proportion, and can, in this way, be continuously re-heated.

In ordinary factory heating a complete change of air every 15 or 20 minutes would be ample, but for schools, hospitals, etc., the air should be changed much more frequently, usually in from 8 to 12 minutes, but in this class of building the air supply is calculated from the number of occupants in the rooms.

Where Applied.

The blast system of heating has been applied successfully to schools, colleges, audience halls, textile mills, paper mills, machine shops, foundries, car sheds, and roundhouses. In paper mills and dye houses there is an excess of moisture which renders the atmosphere foggy and unbearable; by introducing this system large volumes of warm air discharged into the rooms will absorb the moisture and prevent the deposition of the moisture on the ceiling, and the consequent dripping which is annoying and causes, in many cases, considerable damage. In the foundry equipped with the fan or blast system, large volumes of air at moderate temperatures can be forced in while the iron is being run off, thereby clearing the atmosphere and rendering it more healthful and comfortable for the men. In other classes of buildings where more or less objectionable odors, vapors or gases, result from the process of manufacture, the admission of large volumes of air tends to materially reduce the inconvenience and possible danger. Numerous adaptations occur where the convenience of the massed heating surface or the effects of perfect ventilation have a considerable commercial value. Of course the individual conditions must control the method of application and installation, and for this reason each plant has to be carefully checked over, and the heating system should be designed by a competent engineer or manufacturer of these articles.

UNSCIENTIFIC HEATING APPLIANCES.

THE elementary principles of such branches of physical science as sound, light, and heat, have been so universally taught during the last half century, especially since the revival in technical education of the last few years, that one might reasonably imagine it would be impossible now to find up-to-date specialties, of domestic or public utility, which are constructed in flagrant violation of the elementary laws on which the efficiency of such articles depends.

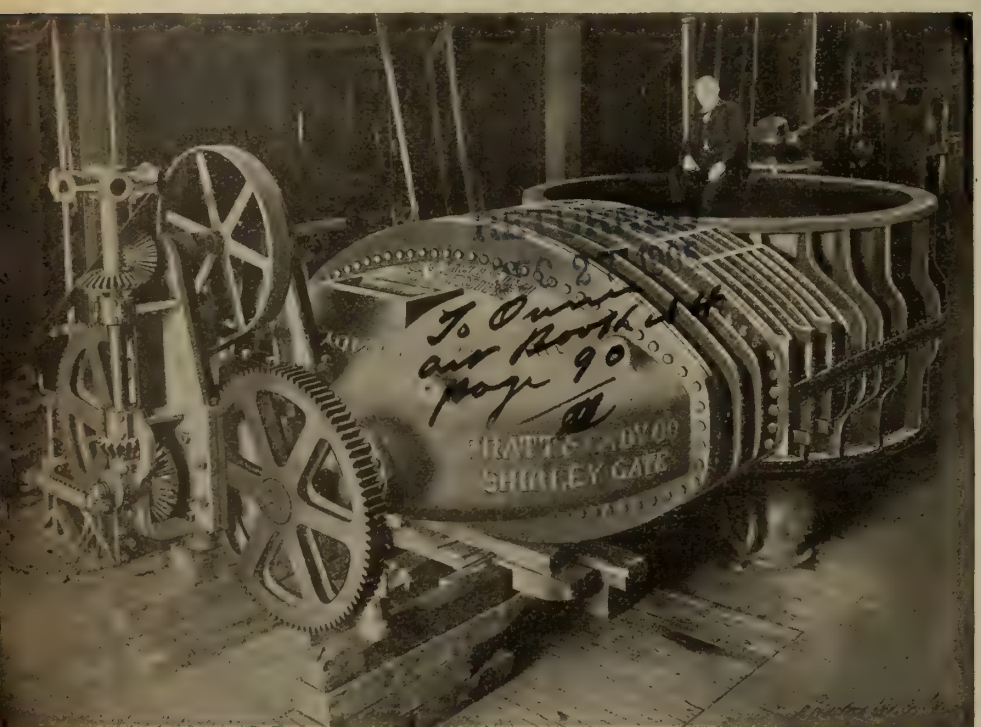
I recently saw a window full of beautiful specimens of the metalworker's art, in copper, brass, and iron. All were highly finished in various styles and generally, no doubt, in harmony with the purpose in view; but among them were beautifully polished and nickel-plated radiators. Absurd as it may seem, there they were sure enough in various styles of polish.

So flagrant a breach of the laws of radiation might pass with a smile were it an isolated case, but judging from the number exhibited in certain quarters the glitter seems to have caught on and the growing anomaly calls for correction.

The use of radiators in various forms is extending so rapidly that it is important for both maker and dealer to understand the elementary laws which tend towards efficiency. Makers and fitters alike will be forwarding their own best interests by leading clients in this matter. Clients look to the trade for efficient service from the apparatus supplied.

Let them know that radiation and polish are antagonistic; that a rough, unpolished surface is the best radiator, and that a smooth, bright surface is the very worst. Every stroke of labor put upon a radiator in the direction of polish is money spent in destroying its heating power.

A polished, plated surface will not give one-third the radiant heat which is given from the same radiator in the rough, thinly coated with a flatted color.



A simple way of testing this is to place a thermometer at a given distance from an urn full of boiling water. Take the temperature first from the polished side, and afterwards from the other, which should be coated with whiting or lampblack: the difference will convince the sceptic.

How often has one touched a hot polished surface and got burnt because it gave no warning by radiation.

An instance of misuse of the science of heat on the opposite extreme of application is seen in the cheap, single-cased gas cookers now so extensively used. Here the object should be to conserve the heat within the cooker, allowing none to escape by radiation, instead of which the outer sides of the cooker are specially adapted for efficient radiation, thus throwing away heat which should be helping the cooking, and causing discomfort by heating a room which is required to be as cool as possible.

The only reason why such anomalies as these remain so long uncorrected seems to be that we get our fuel so easily and cheaply, and that—in the latter instance—we look at economy in first cost of the appliance for "misusing" the fuel and ignore the far greater economy which a more efficient appliance would effect by its saving of fuel every time it is used.

Attention to details such as these—which should be persistently exposed until corrected—will in the future, as in the past, be the surest "protection" possible for home industries.—W. H. Sherburn, in the Ironmonger.

The Largest Valve in the World, Installed in Ontario Power Company's Plant at Niagara Falls by the Canadian Fairbanks Company.

LARGEST VALVE IN THE WORLD.

WE present on this page an illustration of the largest valve in the world, which has just been installed in the plant of the Ontario Power Co., at Niagara Falls, Ontario, by the Canadian Fairbanks Co., of Montreal and Toronto. This valve will control the water power generating approximately 10,000 horse power. This valve is 108 inches in diameter, and weighs 126,000 pounds. The largest valve formerly in operation had a diameter of six feet, and weighed 55,000 pounds.

The Canadian Fairbanks Co. have a contract to supply another valve of the same size to the same company.

Boring for natural gas will be commenced at Calgary shortly. Calgary is also to secure electrical power before long. The C. P. R. has arranged to develop power from falls in the Bow River, sixty miles west of Calgary.

——The pipe with the brand IN it——

We must be sure of our pipe's quality to brand a trade mark into the hot metal itself——
The point is to get you as sure of P-H pipe as we are—that's why we brand it where you can see the brand——
No dodging responsibility then, is there?
When you make up your mind that quality in pipe is worth paying for—and that nothing but quality is——then we will show you that absolute quality doesn't imply higher cost——
P-H pipe, even with the guarantee back of it and the trade mark on it, competes in price with the maybe-goods.
Will you read the book that tells why?
Your copy waits for your call.

Merrell Portable Hand Machines
Nos. 5, 6, 9 and 11

These machines do better and more rapid work, both in threading and cutting off than any other hand machine on the market. They have a greater range of work and make quicker changes from size to size of pipe. The vise is self-centering, is actuated by rack and pinion to feed the pipe into the chasers. The machines have our Standard Adjustable quick-opening and closing Die Head, and our Improved Cutting-off Knife. No. 5 cuts and threads pipe 1 to 4 inches, inclusive; No. 6 cuts and threads pipe 1 to 6 inches, inclusive.

GROWTH OF ACETYLENE LIGHTING.

A COMPARATIVELY new invention, when contrasted with other popular methods of lighting, acetylene gas continues to increase in popularity as an illuminant and is constantly being more generally employed. The German Acetylene Association, the leading organization of the kind in the world, has recently given out important statistics, gathered with great care, which fully establish the truth of this statement. These statistics show that there are about 75 places in Germany, 202 in the United States, 16 in the United Kingdom and 19 in the British colonies provided with public lighting supplies. In Germany alone there are 25,000 smaller installations. So new is this great industry that there is small uniformity in the employment of the gas in various countries. Incandescent mantles for acetylene are extensively, almost universally, employed in Germany, where they give great satisfaction, but are practically unknown in this country, and the practice of purifying the gas varies widely. There is no longer any doubt as to the decided success of acetylene lighting.

A CANADIAN INVENTION.

Emmerson Thompson, Gamebridge, and Thomas A. Brown, Toronto, have been granted a United States patent for the wrench pipe jaw shown in the accompanying illustration. The invention appears to have considerable practical value and should meet with a considerable demand on account of its simplicity and utility.

A New Wrench Pipe Jaw.

CLASS INTERESTS PLUMBERS.

The Master Plumbers' Association of Montreal, desiring to interest itself in the work pursued by the Council of Arts appointed a delegation composed of Messrs. H. Mundy and Joseph Thibault, to visit this class, held in the upper part of the St. Lawrence Market. The first visit was made last week, and the delegation found 100 pupils working under the charge of their instructors. It is the intention of the Master Plumbers' Association in order to encourage the pupils in their work, to offer prizes at the end of the season.

The Dominion Iron & Steel Co. are to lay a 36-in. pipe line from Sydney River to their works at Sydney. They will also install a Tribune pump, to be operated by electricity. The total cost of the work will be at least $100,000.

Premier Gouin of Quebec has announced that there is at present no intention of starting an investigation of combines in that province.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Dec. 22, 1905.

MONTREAL jobbing houses continue to feel gratified at the good volume of business which is keeping up very close to the Christmas season this year. Many travelers are still on the road and are sending in good sized orders in every mail. In fact, dealers here report that their staffs are being kept so busy shipping goods that it has not been possible, as yet, to do any stock-taking.

Prices in all lines keep very firm, and no changes have been made since our last report.

Range Boilers—Normal conditions prevail, the influence of the holiday season not being felt as yet. We quote: Iron clad, 30 gallon, $6.00, and 40 gallon, $7.50 net; copper, 30 gallon, $22.00; 35 gallon, $24.00; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—Last week's discounts hold good again, though a slight easing off has taken place in the primary markets. Our prices are: Discounts 25 per cent. f.o.b. Montreal, Toronto St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—The scarcity reported has been overcome to a certain extent, but it is still difficult to obtain deliveries. Our prices are: Discounts on all sizes of nipples up to 6 inch, 67 1-2 to 70 per cent.

Iron Pipe—The demand keeps very strong and prices are steadily maintained, which we quote as follows: Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $5.50 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.: 1-2 inch, 71 1-2 per cent.; 3-4 inch, and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15,000; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 71 per cent., and for galvanized 61 per cent.

Soil Pipe and Fittings—A trade that shows no let up, is most gratifying to the local supply houses. Our quotations are as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent off.

Solder — We still keep the following prices: Bar solder, half-and-half, guaranteed, 22c.; No. 2 (wiping solder), 18c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Dec. 22, 1905.

A MARKED falling off in trade has taken place, although the business being done is still ahead of this time a year ago. The supply houses are engaged in stock-taking and it is predicted that when all the jobbers have completed this work advances will be made in several lines. The continued advances in copper have not been followed by equal rises in brass goods as manufacturers have had large stocks of raw material bought on a low market. Unless an unexpected drop takes place, therefore, in copper, higher prices on brass goods can be expected. Prices continue the same as last week.

Lead Pipe—Trade is active and the recent advance firmly held to. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 20 per cent.

Soil Pipe and Fittings—No falling off is reported as yet. Prices continue firm. We quote as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe—Business is lively and the market is strong. We quote the following prices: Black, 1-4 inch, $2.09; 3-8, $2.09; 1-2 inch, $2.45; 3-4 inch, $3.05; 1 inch, $4.37; 1 1-4 inch, $5.96; 1 1-2 inch, $7.15; 2 inch, $9.54; 2 1-2 inch, $15.00; 3 inch, $19.35; galvanized, 1-4 inch, $2.91; 3-8 inch, $2.91; 1-2 inch, $3.27; 3-4 inch, $4.20; 1 inch, $6.02; 1 1-4 inch, $8.22; 1 1-2 inch, $9.86; 2 inch, $13.14; 2 1-2 inch, $21.45; 3 inch, $28.05.

Iron Pipe Fittings—Trade is quite active owing to the heavy demand for heating supplies. We quote: Cast iron, elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hookplates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Galvanized Iron Range Boilers—Prices continue unchanged with trade quite active. Our quotations are as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11.00; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

Solder—Business continues lively with prices well maintained. We quote as follows: Bar solder, half-and-half, guaranteed, 21 1-2c. and wiping at 20c.

Enameled Ware—Shortages are being relieved and many jobs are being completed. We quote as follows: Baths, rolled rim, 5 feet, 2 1-2 inch rim, first quality, $18.65; special, $16.65; 3 inch rim, first quality, $19.15; special, $18.15; 5 1-2 feet, 2 1-2 inch rim, first quality, $20.15; special, $18.15; 3 inch rim, first quality, $21.65; special, $19.65. Lavatories, discounts, first quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, first quality, $2.55; special, $2.40.

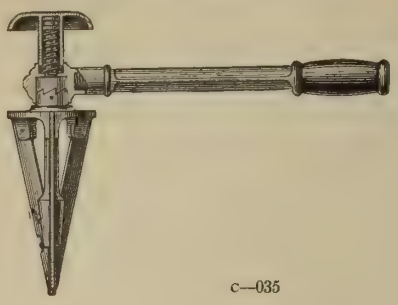
PLUMBING AND ELECTRICAL ITEMS.

A by-law to spend $150,000 for water works has been defeated in the town of Owen Sound.

The Stuart Machinery Co., Winnipeg, has installed an electric lighting plant at Swan Lake, and are canvassing Treherne, Man., with a view to installing a plant there.

The Acetylene Construction Co., of St. Catharines, have arranged to instal plants at Manitou and Yorkton. This company have already six plants in Western Canada.

All the connections have been made at Galt to admit of the Dominion Natural Gas Co. turning on their product. Gas will be supplied at a minimum of 35c., and a maximum of 55c., per thousand.



Messrs. Green & Lidster, of Winnipeg, have the contract for installing the steam heating and electric lighting plant in Harty & Smith's new hotel at Fort Frances. The cost of the heating plant and electric apparatus will exceed $3,500.

The new Western Canada Flour Mills, at Winnipeg, will be operated by electricity. A contract for the necessary equipment has been given to Allis-Chalmers-Bullock Co., Montreal. The order is one of the largest given for this class of work in America.

H. H. Dryden, Surrey, N.B., has secured the contract to install heating system in the new school building at Chipman, N.B. Two Kelsey hot air generators will be used. Mr. Dryden has also the contract to install a Cumberland furnace and bathroom in the new hotel being erected by Mrs. Darrah, Chipman, N.B.

MUELLER PIPE REAMERS

Ratchet Handle Pattern

c—035

While it requires steel of good quality to make good reamer blades, it also requires good tempering to utilize the quality of the steel.

Mueller Pipe Reamer Blades are made of steel of good quality and tempered in a manner to make the best use of its quality in the strength of the blade and the durability of its edge.

Mueller Pipe Reamers ream all sizes of pipe from ⅜ to 3 inch, and are made in plain handle and ratchet handle patterns. The reamer illustrated is the ratchet handle pattern.

Each reamer is given a working test as near like actual service use as possible, bears the Mueller trade mark, and is *unconditionally guaranteed.*

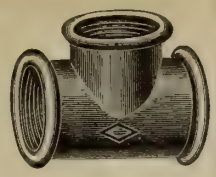
THE ERROR OF YOUR WEIGHS

continues as long as you have a cheap or poorly made scale around your store.

¶ A scale that is not extremely sensitive and accurate is a source of daily loss to you.

¶ No matter how small the loss is, at the end of a year it will surely amount to considerably more than the price of a new scale.

¶ Remember that Fairbanks Standard Scales have been the world's standard for over three quarters of a century.



¶ If your scales are giving you trouble, get a Fairbanks and you won't have to worry about any drain on your profits. A Fairbanks Scale will last a life time.

The Oxford Hot Water and Steam Heating System

means a difference to you—a big difference. When you figure on a heating system you allow a reasonable margin for profit. Your margin develops into actual profit when you instal the

OXFORD HEATING SYSTEM

because when the job is finished it is finished.

There are lots of new buildings going up in your town, and new heating systems are being installed all the time. The Oxford Heating System is so strong and convincing a proposition that if you say for it all you can truthfully say, you won't have to worry over slow business.

The Oxford ("B" Series) Boiler is the most modern, powerful and economical heat generator in existence. A glance at the cut will convince all practical men of its immense superiority.

The unparalleled success of this boiler is largely due to the scientific construction of the fire pot.

The fir pot is wider at the bottom than the top. This prevents the accumulation of dead fuel around the most active surface of the boiler. The upper walls of the fire-pot overhang the fire. This construction forces the heat to impinge and adds to the area efficiency of the heating surfaces and the power of the boiler.

The first water section is double the depth of the others and has bell-shaped flues, thus repeating this principle and still further increasing the power of the boiler.

A no-leak joint. The old method of making connections with gasket or washers was the source of much trouble. The Oxford tapered steel nipples pressed into smooth tapered holes makes a permanent iron-to-iron joint.

OXFORD STEAM AND HOT WATER RADIATORS

used with an Oxford Boiler assure economy and comfort to your customers and lots of good words for you.

Send for the Gurney Oxford Book of Steam and Hot Water Heating Apparatus.

WE also manufacture Cast Iron Stoves and Ranges, Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges and all kinds of Cooking and Heating Apparatus, Plumbers' Supplies.

CURRENT MARKET QUOTATIONS.

Dec. 22, 1905.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

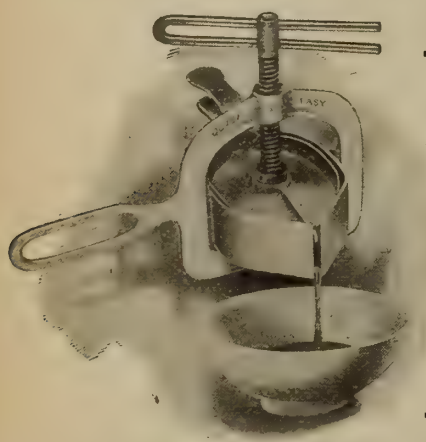
Frequent attempts have been made to imitate

Storm King Track

without success, and it stands to-day in a class by itself—**The most perfect Barn Door Track** made in Canada.



Every piece stamped "Genuine Storm King" with our name.

Insist on getting, **Storm King Brand.** You will find it pays.

Ask Your Jobber

MADE BY

SAFETY DOOR HANGER CO., - Hamilton, Canada

Walker's Quick and Easy Meat and Fruit Juice Press

Made to clamp to the table or hold in the hand. They are made in three sizes and three styles of each size; capacity, one-half pound of meat at a press full.

As all the juice is out as soon as screwed down, several pounds can be pressed in short space of time. The real capacity is equal to others of larger and more expensive prices.

Books for Plumbers, Steam Fitters, Etc.

Furnace Heating

By W. C. Snow.

The author has prepared a book of reference for the furnace man or the architect. There are tables which have been tested by years of practical use. They are of great value to the practical furnace man.

170 pages, 6 x 9 in.; 90 illustrations; cloth bound.

Price, post paid, - - $1.50

(This book has had a heavy sale in Canada.)

* * *

Kitchen Boiler Connections.

A selection of practical letters and articles relating to water backs and range boilers.

The work is divided into two parts, the first on water backs and boilers and their connections, and the second on heating rooms from range boilers, a topic that has much practical interest to the plumber. There are few lines of work where so many little difficulties arise, and therefore the discussion of different questions which have arisen should be of great interest as well as practical value to workers in this line.

Fifth enlarged edition; 194 pages; 6 x 9¼ inches; 113 illustrations.

Cloth, post paid, - - $1

* * *

Formulas and Tables for Heating.

Being German formulas and tables for heating and ventilating work, for those who plan or erect heating apparatus. By J. H. Kinealy, M.E.; 56 pages; 4½ x 7 inches; leather.

Price, post paid, - - $1

* * *

American Sanitary Plumbing

By J. J. Lawler.

For plumbers, steam fitters, architects, builders, apprentices, etc. Containing practical information of all the principles involved in the mechanics and science of modern plumbing, illustrating with original sketches the fundamental principles of everything the plumber should know. Everything explained in the most simple language, so that it will be impossible to misunderstand anything.

Large 12mo, cloth, post paid, - $2

Steam and Hot Water Fitters' Text Book.

A book prepared for the Steam and Hot Water Heating Course at the New York Trade School, with supplementary chapters on house heating, specifications and surface estimating; by Thos. E. McNeill.

This book will be appreciated by those who wish to master the principles of steam and hot water heating. The definitions in the beginning deal with the appliances, and little by little the reader is led on until at the close he is informed how to figure surfaces, lay out plans and install heating apparatus with the necessary piping.

140 pages; numerous illustrations and diagrams; 5 x 7 inches.

Cloth, post paid, - - $1

* * *

Plumbing and House Draining Problems

A selection of articles for practical plumbers.

This volume provides reliable and practical information for ready reference and assistance to plumbers who are confronted by problems with which they have had no previous experience. One-half of the edition is devoted to new problems and special articles. This book will prove a valuable reference in any plumber's library.

297 pages; 6 x 9 inches; 146 illustrations.

Cloth, post paid, - - $2

* * *

Practical Gas Fittings.

Describing how to run mains, lay pipes and put up gas fixtures. 116 pages; 54 illustrations; 5¾ x 8 inches.

Cloth, post paid, - - $1

* * *

Practical Hints on Joint Wiping.

A book containing articles on practical joint wiping for beginners in plumbing, with an appendix giving a selection of practical letters and articles.

66 pages; 5½ x 8; 41 illustrations.

Paper, post paid, - - 25c.

WHAT IT DOES

(Continued)

Daylight passing down a light shaft 105 feet high, gathered and diffused throughout a room 40 feet long ; 8,300 windows placed in buildings in the period of a few months, is pretty good evidence of the capability of **Maximum Light Glass** and the tangible way in which it is being endorsed.

"Complete Illumination" in a room, the windows of which were entirely below the pavement line and the area wall only 30 inches from the glass, shows that while there may be hopeless cases with "other" systems, none can baffle **Maximum Light Glass.**

No builder, etc., ever regrets installing

MAXIMUM LIGHT GLASS

It reduces artificial light bills 20 to 30 per cent.

Architects by specifying **Maximum Light Glass** for use in the sashes need never include a "dark" room in their plans.

Isn't this wonderful glass worth enquiring about ?

THE WESTERN HARDWARE ASSOCIATION.

AS 1905 draws to a close hardwaremen in all parts of the country are commencing to take stock or are planning to do so. The Western Retail Hardware Association has also been taking stock of the progress made during the year, and it is fitting that Hardware and Metal should present its readers with the results of that stock-taking. The best evidence of the actual strength of the Association is afforded by the membership list, and hence no apology is necessary in presenting the entire membership list to date. It is as follows:—

Winnipeg District.—The J. H. Ashdown Hardware Co., Ltd., Leon Abramovich, Anderson & Thomas, Allaire & Bleau, Baskerville & Co., A. E. Dykes & Co., E. G. Flook, Graham & Rolston, Gilmer & Co., Glenwright Bros., Macdonald & Fleming, McLean Bros., Lennox & Butt, N. Lightly, J. E. Riley, Jas. Sinclair, W. A. Templeton, R. Wyatt, Weir & Wilson, Watt & Gordon, C. A. B. Whiting, Wyatt & Clarke, Winnipeg Paint & Glass Co., Hudson's Bay Co.

Souris Line District.—Dean & Co. and J. Rinn, Elm Creek; Beuttner Bros., R. J. McConnell, and Walton & Clea, Carman; A. Forbes and Carswell Bros., Rathwell; L. F. Sherrin and D. Spear, Holland; C. A. Hamilton and Geo. Huston, Cypress River; Doig & Wilcox and E. C. Irving & Son, Glenboro; R. W. Middlemis, Nesbitt; J. W. Graham, Carrol; Currie & Mitchell, Souris Hardware Co., and W. McCrory & Co., Souris; Hamelin Bros. & Co., Lauder; Gaudin, DeWitt & Co., Napinka.

Morris, Brandon and Hartney District.—Phillips Bros. and A. E. Coade, Morris; D. Phillips, Dominion City; J. E. Birch & Son and Jas. Mawson, Roland; Leggitt Bros., Rosebank; Lawrence & Campbell, Miami; J. A. Decose, Somerset; A. E. Downey, Swan Lake; T. E. Poole, Baldur; F. F. Sparks and J. Smith, Belmont; R. J. Neithercut and C. E. Neads, Wawanesa; Jas. Martin, Rounthwaite; J. Yellowlease, Ninette; J. A. Dunlop, Dunrae; E. T. Johnson, Minto; D. Gibson, J. W. Maguire and Robertson Bros., Elgin; H. Hunter and Hartney Hardware Co, Hartney; C. D. Sparrow, Fairfax.

Estevan Line District—H. V. Morse, Hamelin Bros. & Co., Melita; J. F. Dandy, Pierson; F. G. Elliott and W. R. Burke, Gainsboro; Coade & Hughes and S. Shannon, Carievale; J. P. Shannon and R. J. Porteous, Carnduff; Hames, Wylie & Co., and E. Crossley, Oxbow; McKeen Bros. and Riddell & Co., Frobisher.

Deloraine Line District.—W. & J. Stewart, Plum Coulee; W. & J. Stewart, Winkler; A. P. Brown, Morden; Coleman Bros., Darlingford; R. J. Chalmers and D. Gunn, Manitou; M. Keating, La-Riviere; Chalmers & Watson and D. B. Graham, Pilot Mound; G. R. Taylor and McNamee & Argue, Crystal City; H. McLean and Moore & McIntyre, Mather; L. H. Phillips and Moore & Hills, Cartwright; Cairns Bros. and D. Bradley, Holmfield; J. McNaughton, Killarney; C. A. Landon and E. F. Johnson, Ninga; H. S. Price and Davis & Wilson, Boissevain; The McKay Co., Whitewater; A. J. Falconer Co., and Wm. Chalmers, Deloraine; W. H. Dandy, Medora; Campbell & Ferguson and G. R. McLean, Waskada; I. P. Cheney and M. A. Boyd, Lyleton.

Soo Line District.—Stockwell & Perry, F. J. Musgrave and Estevan Hardware Co., Estevan; Macoun Hardware & L. Co., Macoun; Weyburn Hardware Co. and Thompson & Axworthy, Weyburn; A. S. Baker and S. Taylor, Yellowgrass; W. H. Pain and A. E. Jones, Milestone.

Dauphin District—F. N. Smith, McCreary; J. Seve, Laurier; A. Douglas, Makinak; W. A. Oliver, Ochre River; A. J. McPherson, Dauphin; Sutherland & Stelck, Dauphin; C. F. Turner, Dauphin; C. C. ed. Ross Bros., Limited, J. Sommerville & Sons, J. Henderson, Edmonton.

Stonewall District—W. Montgomery, G. Brown, Stonewall.

Main Line East—E. A. Dugard, Beausejours.

* * *

From the above list readers may judge for themselves the scope and influence of the association. In the vast majority of towns included in the list every hardwareman is a member of the association. In almost every case where not all hardwaremen have joined, those familiar with the territory will bear unhesitating testimony to the fact that the association has the most substantial and most progressive dealers. The association, started in fear and trembling, perhaps, in the Summer of 1904, has grown to such proportions that it commands the respect of jobbers and manufacturers in all parts of Canada. Its rapid growth and the character and standing of its members have also silenced the scoffers who predicted the early discomfiture of the few enthusiasts responsible for the movement. He would be a rash man who would examine the membership list, note the names of the most substantial and most progressive hardwaremen of the west and then predict that a movement supported by these men would come to naught. The character of the membership ensures success.

* * *

With the close of 1905 the organization of the three provinces of Manitoba, Saskatchewan and Alberta is practically completed with the exception of the northern portion of the two new provinces. So many new stores are being started in that part of the country at the present time that Mr. McRobie has decided to postpone his trip there until Spring, as it will be necessary then to visit the trade in those towns in any event.

* * *

With the preliminary work of organization so well in hand, the executive now have an opportunity to outline a forward movement in many different directions. For that reason the approaching semi-annual meeting to be held during the Winnipeg bonspiel is of special importance. Western hardwaremen should make their arrangements to attend, for with the forces so well organized there is now opportunity for decisive action in several matters.

ONTARIO READY TO ORGANIZE.

FROM present indications the movement to organize a Hardware Dealers' Association in Ontario is likely to develop large proportions before the date of the proposed preliminary convention next Good Friday arrives. Many hardware retailers are discussing the necessity of the organization and advantages to be gained through association and after the holidays there should be some action taken towards forming a provisional committee to carry the work of organization to a successful conclusion. Dealers will then have more time also to put their ideas in shape in the form of letters to Hardware and Metal.

A most interesting letter has been received from a prominent hardware merchant in Western Ontario, he going into detail regarding the many points which could be discussed and acted upon to advantage by a hardware association. It is letters of this sort, discussing matters of vital interest to the trade, that we like to receive. Space, however, will be given to any correspondence on this subject and we trust our offer will meet with a prompt acceptance. The letter referred to follows:

* * *

"Editor Hardware and Metal,—Please notify us of any action taken toward the formation of a Provincial Retail Hardware Association. The writer, who for the past 10 years has been connected with a large manufacturing concern, has been in a position to get an insight into the workings of associations among manufacturers and wholesalers and we are surprised that a retail association has not long ago been formed.

There are many matters upon which retailers might be greatly benefitted by unity, for instance:

1st. Insurance rates should be reduced.

2nd. Freight rates require attention.

3rd. Selling direct to contractors by wholesale houses should be stopped.

4th. Large general stores are placed on jobber's lists and cause unfair competition.

5th. A central collection department would be a good feature. "Poor payers" are always better for "outside pressure."

6th. Business should be put on a cash basis as largely as possible or a uniform system of credit established.

7th. A central buying office is not absolutely impossible, for some lines at any rate. Very considerable reductions may be obtained in that way.

8th. Have a secretary who will be a "watchdog" on the markets and let members have the benefit of his experience and knowledge.

An association, we think, would be of inestimable value and as for us, we will heartily co-operate in its formation."

B. GREENING CO'S CALENDAR.

AN advance copy of the illustrated calendar for 1906 issued by the B. Greening Wire Company, Hamilton, has been received. This has become an annual feature, and the trade look for it, appreciating the tables regarding wire goods given on the last page. The style has not been altered from last year's calendar, the large figures for the days of the month being considered a decided advantage and the heading being indicative of the style and development of their business. A communication, mentioning this paper, will secure a copy of the calendar.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

Cash and Despatch Boxes.

A hardware line which is fast gaining popularity is the one mentioned above. One of the most complete assortments on the market is shown in the catalogue recently issued by T. W. & J. Walker, Wolverhampton, England, whose Canadian sales agent is J. A. Henderson, Board of Trade building, Montreal. The booklet, which contains eight pages and cover 10x7 inches, reproduces in color a great variety of the cash and despatch boxes manufactured by this well-known firm, from the plain popular priced lines to the more ornate and expensive ones. Hardwaremen generally will be interested in this catalogue, which will be sent on request if Hardware and Metal is mentioned.

A Breeze From the West.

Sheppard & Elliott, hardware merchants and plumbers, Fernie, have issued a typical western calendar, the illustration showing a cow-girl, revolver in hand, posing for her picture. The empty bottles in the background would indicate that there had been something doing in the drink line before the artist did his work. The picture is nothing if not western.

Kinsmen Desk Lamps.

A small booklet of envelope size describing the many styles of Kinsmen desk lamps sold by the Canadian General Electric Company, Toronto, has been received. Dealers who handle electrical supplies can secure detailed information from the above named company by mentioning this paper.

A Dramatic Calendar.

Customers of the James Robertson Company have received from this firm a parlor calendar which is in every sense a beauty, it being worthy of a place on the walls of any home. Artistic reproductions of photos of four of the leading actresses of the day were included on four separate pages, the only advertisement being a few words in small letters in a place where it will not be noticed. The company is to be commended for the taste displayed in their selection.

Industrial Opportunities.

The Massachusetts Bureau of Statistics of Labor, Boston, has issued a valuable volume of "Industrial opportunities not yet utilized in Massachusetts." Much data of value to prospective locators is given, the style of the work being such as could be copied to advantage in this country.

Telephone Girl Calendar.

The James & Reid Company, hardware merchants, Perth, have supplied Hardware and Metal with a copy of their 1906 calendar containing a striking illustration of a telephone girl. "If it's hardware we have it" is the terse way of putting forth their claims for business from those receiving the calendar.

OUR AUSTRALIAN LETTER

FROM OUR OWN CORRESPONDENT

CANADA recently made overtures to Australia on the subject of preferential trade between the two countries. Federal Ministers are now studying in what way it would be profitable to develop increased trade with Canada.

From the Victorian Chamber of Manufactures our Prime Minister (Mr. Deakin) has received a resolution asking his ministry to "seriously and immediately consider" the proposal to establish trade relations with Canada, "which," the resolution adds, "this chamber hopefully trusts may be eventuated." Mr. Deakin has not yet received the report of the Customs Department upon the proposal of Canada, but he is considering certain data which is in his own department. The whole matter has yet to go before the cabinet.

* * *

The despatch received from your Dominion Government regarding this momentous matter reads as follows:

"On a report dated 30th June, 1905, from the Minister of Finance, submitting that, under the provisions of the customs tariff, 1897, and amendments thereto, the benefits of the preferential tariff were by orders in council of June 28, 1897, and July 14, 1898, extended by Canada to the colony of New South Wales.

"The Minister states that upon the union of the Australian colonies, New South Wales ceased to have a separate tariff, and came under the operation of a tariff adopted for the Commonwealth generally. In consequence of such change the orders in council above referred to were rescinded on January 23, 1903.

"The Minister of Finance deems it desirable that the Government of the Commonwealth of Australia should be invited to consider the advisability of entering into preferential tariff arrangements between Australia and Canada. The terms which Canada is able to offer at present are set forth in the present Canadian Customs Tariff.

"The Minister observes, that, in accordance with announcement made some months ago, it is the intention of the Canadian Government to cause an inquiry to be made at an early date, into the operation of the Canadian tariff, with a view to making some revision at the next session of Parliament.

"The Minister further observes that while some tariff changes may be brought about, it is not the present intention of the Canadian Government to depart from the principle of British preferential trade already established.

"That the revised tariff may, therefore, be expected to include the preference to the products of the United Kingdom, and to those of such British colonies as may be prepared to make favorable trade arrangements with Canada.

"The committee, concurring in the report of the Minister of Finance, advise that His Excellency be moved to inquire whether the Government of the Commonwealth of Australia would be willing to enter into negotiations with the Government of Canada, with a view to establishing preferential trade relations between the two countries; and, if so, whether the Australian Government would be prepared to offer state tariff concessions by conferences between delegates representing the Australian and the Canadian Governments."

* * *

Our Federal Minister for Customs has decided to enforce the law respecting the invoice value of goods exported to the Commonwealth. According to the Minister's own statements, under the system previously in force, it was estimated that we were losing about £30,000 or £40,000 per year in connection with charges made between the port of manufacture and the port of shipment of Canadian and American goods. The decision to go back to the f.o.b. value was based on that. The Minister remarked that, so far as Canadian goods shipped via New York were concerned, he had decided to allow the f.o.b. value to be stated as if the port of shipment were the Canadian border, but, as a result of certain information which has recently come to hand, he was now seriously considering whether this concession would not have to be also withdrawn.

* * *

Figures supplied recently by our Comptroller-General of Customs are interesting in the light of the above decision of our Federal Ministry to add inland transportation charges to Canadian invoices when tssessing and the madian invoices when assessing value for duty. There are fixed rates of duty on 47 per cent. of the imports from Canada, and ad valorem duties on 43 per cent., while 10 per cent. of the imports are admitted free. As transportation charges are added only to the goods on which there are ad valorem duties, this official points out that about 57 per cent. of the imports are not affected by the new f.o.b. regulation.

* * *

The Minister for Customs stated yesterday that he had received a communication from a Government official in Canada giving details of the practice of exporters there. The writer says the rule is for exporters to prepare two invoices—one for the customs and one for the purchaser, the object being to increase their export trade and to capture the markets of the world. He thinks something should be done to put a stop to this practice, and expressed his willingness to take the position of Australian representative in Canada. Our Minister does not intend to make any appointment.

* * *

No official protest has been received as yet by our Federal Ministry from your Government respecting this important decision of the Customs Department. A cable message recently published here stated that at Ottawa it is feared that the principal Canadian houses may export to Australia via New York instead of via Vancouver, and thus, by withdrawal of freight from the Canadian-Australian mail service, cause this Pacific line to be discontinued. Our central customs authorities admit that this is not at all improbable. Section 143 of our Customs Act provides that "goods exported to Australia from any country, but passing through another country, shall be valued for duty as if they were imported directly from such first mentioned country." Goods sent to Australia via New York would therefore, only have to bear freightage from Montreal to the border of the United States, while, if sent via Vancouver, they would be loaded up with twice the amount of freight, owing to the longer haul. Transportation charges are only added to ad valorem goods, but two-thirds of the imports from Canada come under this head. The probable fate of our Vancouver mail service will be decided directly. Parliament will be asked to ratify the contract which will expire in June next, and many members will endeavor to persuade Ministers to withdraw the Federal subsidy of £26,626 per annum when this agreement expires.

* * *

Regarding the matter of our mutual mail service, negotiations for a new service from Australia to Vancouver are still proceeding between our postmaster-general and the Union Steamship Co. It was stated recently that our Federal Ministry wished to cease paying a subsidy for this service, and to revert to the poundage system, but the postmaster-general says that there is no foundation for this rumor. Canada, Queensland and New Zealand are all interested in the Vancouver line, and it is understood that your Government has raised objections to changes of route which have been proposed by the Queensland and New Zealand Governments.

ADVANTAGES OF ORGANIZATION.

READERS of Hardware and Metal have frequently seen references in these pages to the Retail Hardware Association in the West, and the doings of that body which has done so much to build up the trade in Canada's new provinces. Recently, too, we reported the organization of a Retail Hardware Association in the city of Montreal.

These are moves in the right direction, and Hardware and Metal has been delighted to see these signs of union in the trade. But why do not the dealers of Central Canada follow the lead?

The advantages of union are very obvious, but let us first put the matter in this way. Would you, reader, like to meet, once a year at least, a number of men with the same environment, the same ambitions, and the same difficulties as yourself? Why, you would be surprised at the amount you could learn from them and the number of things, too, that you could teach them. You would come home brimful of enthusiasm and new ideas. You would have cast off some antiquated business methods and acquired some up-to-date but tested schemes for carrying on and enlarging your trade.

Think it over, and let us know whether you would not be willing to support such a movement. We would be glad to receive the names of merchants who favor a provincial or national Retail Hardware Association. No better time for organizing the trade could be found than the comparatively slack period which follows the New Year's season. It's up to you.

A HAPPY NEW YEAR.

TO all the readers of Hardware and Metal we extend our best wishes for a Prosperous and Happy New Year, and express the hope that it may see your expectations fulfilled and your ambitions realized in so far as that is possible within one year.

No people living to-day have greater cause for thankfulness, for the blessings of the past, than the citizens of the Dominion of Canada. No people can look forward into the year upon which we are now entering with greater hope and confidence. All this should go towards making thankful hearts, a contented people and promote a high sense of citizenship. With what the coming year promises the people of Canada generally, there is every indication of a further tide of prosperity and we hope that every reader of this paper may share it in no small measure.

THE VALUE OF PUBLICITY.

REPRESENTATIVES of Hardware and Metal occasionally run across a manufacturer, merchant or traveler who declines to allow his name to be used in connection with an article containing valuable information supplied by him, one who sends an interesting communication and marks it "not for publication," or one who declines to supply a photograph when requested to do so for the purpose of illustrating a brief sketch of the business career of the one solicited. The modesty of those who act as outlined above is appreciated but we believe that it is carried to an unnecessary extreme.

Representatives of business concerns should in many instances sink their personal likings in order to gain advantages and better serve the interests of the house whose success they are interested in. Too often men work along their own lines and form their own associations, when by considering the interests of their firm they would accept opportunities offered of making their firm name better known and more popular. Men should cultivate outside acquaintances and know everyone interested in any business connected in any sense with the one they are engaged in.

It can be said with little reservation that a business house and a commercial man cannot be too well known, or cannot, in other words, have too much publicity. True it is that some men appear to overdo this matter and manage to have their names in print nearly every time they light a cigar. But because such men are over-enthusiastic regarding the value of printers' ink is no reason why others should let good opportunities go past them to acquire publicity in connection with matters which are not trivial.

The series of sketches we are publishing under the head of "Successful Jobbers and Salesmen" has proved very popular, having made it possible for the retail trade to become better acquainted with the men from whom they are buying goods throughout the year. Several salesmen have through modesty hesitated to supply photographs to illustrate personal sketches, but from the number of favorable comments received from subscribers it is certain that this modesty is misplaced. They would be strengthening themselves with their employers and with the trade by allowing the suggested sketches to be published. In one case several large customers were secured by one salesman as a direct result of his inclusion in the series now running weekly on our third editorial page.

In these articles an effort is made to avoid making any flattering or undeserved commendations—all that class of talk commonly known as "hot air" being excluded. What we desire to give is a mere sketch of the experience of the subject of the article together with some personal references to the salesman without saying anything which would be likely to lead customers to believe the salesman is too prosperous and can get along with less business.

Publicity is a good thing for business men and they should cultivate every opportunity to bring their name before their customers in every legitimate manner.

THE 1905 STOVE TRADE.

OPEN weather during the past two or three months has made the present season an unsatisfactory one for many manufacturers and stove dealers. The amount of stock in the hands of retail merchants and being carried over by some manufacturers is larger than any season during the past five years. Of course the buying season is not yet over and a fair movement of goods can be looked for when really cold weather arrives, be it ever so late, but the large stocks being carried now indicate that much of this season's manufacture will remain to be sold next season. This may have its effect on prices, also, as unless manufacturers curtail their output next year's stocks may be too large to allow of an advance in prices, even though iron, steel, copper and other metals maintain their present high prices. A factor which has

much to do with this season's overstock is the enormous quantity of American stoves imported into the Canadian Northwest, a market Canadian manufacturers are especially catering to and trying to hold by the making of stoves designed exclusively for that trade.

Canadian stove founders realize that their competitors in St. Louis, Chicago and other manufacturing centres can produce from 20 to 25 per cent. cheaper than founders in Eastern Canada owing to their ability to purchase raw material to better advantage, but they cannot understand how the Americans can afford to pay the 25 per cent. duty and undersell the home manufacturers in Manitoba and the northwest without coming under the workings of the dumping clause. Freight is slightly less from the cities named to Winnipeg and Calgary than from Toronto, but it is practically certain that the difference in price in favor of the American goods is because of unfair competition.

If Canada is to be built up as a manufacturing country and the iron industry is to be an important one it is evident that higher protection is necessary to keep the northwest market for the home manufacturer.

TACK "COMBINE" INVESTIGATION.

THE second instalment of Crown Attorney Curry's serial of revelations concerning the combine industry in Canada was begun on Thursday in the Toronto Police Court, the evidence submitted being mainly a review of the history, scope and aims of the Canada Tack Manufacturers' Association as revealed by the minute books and correspondence found in the offices of Messrs. Jenkins & Hardy. The exhibits filed showed that the tack manufacturers had proceeded along the usual lines—a detailed agreement as to uniform selling prices, discounts, etc. The case will be continued on Tuesday afternoon next.

The names of W. W. Near, M. A. Irwin, and R. T. Sinclair were withdrawn because these gentlemen were only employes of the Pillow, Hersey Co. Others withdrawn are J. Moat, who now lives in British Columbia; James H. Peck, who is dead; A. F. McPherson, who was not served; R. Hersey, a resident of Chicago; E. Perkins, whose home is in Massachusetts, and G. A. McAlgy, who is dead. The names remaining are James Hardy, Thos. Jenkins, F. H. Whitton, H. M. Blacklock, A. H. Huff, W. T. Cumming, J. R. Kinghorn, T. E. Peck, F. W. Knowlton, E. J. Fry, G. Boyd, W. Buckhoff, Jas. Pender, W. L. Goodall, and Wm. McMaster. W. N. Tilley appeared for the defendants and pleaded not guilty.

Mr. Curry laid down the groundwork of his case by placing before the court the minutes of the Canadian Tack Manufacturers' Association. The story of the organization as revealed by the minutes is substantially as follows:

The association was organized in Montreal in 1892, with the following membership: The Pillow-Hersey Manufacturing Company, the Montreal Rolling Mills Company, the Peck Benny Company, and the Ontario Tack Company, of Hamilton. Wm. McMaster was elected president, T. H. Whitton vice-president, and R. and T. Jenkins secretary-treasurers. The object of the association was declared to be the regulation of prices and terms of sale on tacks and similar goods comprised in the schedules drawn up. The agreement was to remain in force for one year, meetings to be held alternately in Montreal and Toronto. All members were to abide by any resolutions adopted, and "were not to sell the goods comprised in this agreement at prices below or on better conditions than those fixed in the schedules annexed or in future schedules, except always that members of the said association shall be entitled to sell to each other at any price they may see fit." Members were not to consign goods to anyone but bona fide agents, and were not to have recourse to any subterfuge in evading the terms of the agreement. Monthly statements were to be furnished by each firm, and Mr. Jenkins was to be allowed access to each company's books at any time. A fine of $300 was to be imposed for any refusal to allow examination of books or the checking of goods, etc. At first a system of higher and lower discounts had been allowed to jobbers signing the stipulated agreement as to selling prices but this had been superseded by loyalty discounts, in which each company observing the agreement participated.

Later on, "under pressure," other firms joined the association, these being James Pender & Co., Portland Rolling Mills, and W. D. Woodhall Company.

Mr. Curry read a number of extracts from the letter fyles found in Jenkins & Hardy's offices. In one case complaint was made that the Hobbs Hardware Company, of London, were violating the agreement by selling below the schedule prices. "We need not remind you," ran the letter, "that it is absolutely necessary that prices be maintained." Reference was also made to prices current "before the combine went into effect." Another letter read: "We need not remind you of the fact that a certain jobbing house not far from our office has not yet entered the combination. We presume before long their needs will compel them to do so." One Montreal jobber in explaining an inadvertent cutting of prices, said: "There are so many associations that we lose our heads trying to follow out all the agreements laid down."

TRADE AND COMMERCE—WEEKLY REPORT.

PROBABLY there is no instance on record of so rapid and substantial a growth in the industrial situation of any country as that of Canada. That it has not been attained without hard and persistent work goes without saying, especially when it is remembered that comparatively few years ago Canada's possibilities were unknown, and little credence was placed in any suggested commercial possibilities. All has changed, however, and foreign countries are vying with each other for Canadian trade.

A review of the records of trade inquiries received at the Commercial Agencies' Branch of the Department of Trade and Commerce, Ottawa, is most instructive reading in this connection, and reveals the development of a very satisfactory system. Within the past few years this department has done good work. Eight years ago a few inquiries were annually received from foreign houses, but in the absence of any particular system proved uninteresting and unremunerative. In the early part of 1904, however, the system which had in the interval been formulated was brought to perfection by the decision to issue a Weekly Report and Mr. F. C. T. O'Hara took the matter in hand with such a degree of zeal that by the end of that year the number of inquiries had jumped from a modest 19 in the year 1898 to some 566 in 1904, whilst for the 11 months ending November 30, 1905, a total of 759 inquiries had been received with another month yet to come to complete the year. This, however, satisfactory as it is, is only one side of the question at issue; the other side and certainly the most important is as to the number of answers which the publicity of those inquiries called forth, as it is upon this feature that the success really hangs.

A reference to the records reveals the fact that whilst in the year 1898 there were no addresses whatever furnished to the inquirers, and later in 1903 only the insignificant number of 157, during the first year of the publication of the Weekly Report the Department was enabled to place the addresses of nearly 1,200 firms in the hands of inquirers, and better still, during the 11 months ending November 30, 1905, upwards of 2,500 addresses have been already supplied to these inquirers. The Department is to be warmly congratulated upon so favorable a result, which goes to show how much can be accomplished by

the introduction of systematic methods and publicity.

The Weekly Report is always full of instructive and interesting information, and the reader feels he is getting the latest and thoroughly reliable news. Any of our readers who are not getting it would do well to apply for a copy, and be kept by it in touch with the world news of the British Empire.

SEASONABLE SUGGESTIONS

A wonderful pocket knife having 75 blades with a local scene engraved on each is in the possession of Joseph Rodgers & Co., the well known cutlery manufacturers, of Sheffield. It must be a somewhat unapproachable weapon, as the proprietors, it is said, offer £1,000 to any person who can shut all the blades without cutting his fingers.

* * *

We haven't heard of a Canadian hardwareman yet adopting the plan used by a Western States merchant to bring customers to his store, but it's a good one, and as sleighing will soon make the country roads in splendid shape for traveling merchants in various sections should try the plan. The westerner advertised that he would give $10 to the person who, on a certain day, brought into the place, and deposited in front of the firm's store, the largest number of people on one vehicle. All sorts of conveyances appeared, and it seemed certain that the farmer who brought in eighty-six persons on a wagon fifty feet long would gain the prize. But at the last moment there appeared a singular vehicle, eighty-five feet long and twenty feet wide. It moved on eight wheels, and was drawn by eight horses. From it descended 110 people.

* * *

A general merchant in Illinois has hit upon a scheme for attracting crowds to his establishment during the dull season. He buys a large assortment of glassware, ranging in price from 75c to $7 a dozen. This assortment is placed in the show window of his store. In the front of the window, for about a week in advance of the date, a sign is placed announcing that all customers buying $1 or more of merchandise during a stipulated period can have a choice of any article in the window for 5 cents. A notice to the same effect is inserted in the daily newspapers. In some cases, glassware that is ordinarily sold as high as $1 apiece is offered at 5 cents. The fact that much of the glassware is sold at pretty near the ordinary rate is overlooked by the purchasers, who think only of the greater values. The dealer has tried the scheme on numerous occasions and invariably finds it to work handsomely.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 12.

ABOUT a year ago Henderson & Potts Co., Limited, of Montreal, decided that the growth of their business in Western Canada demanded the establishment of a branch in Winnipeg. For the management of this important extension of the firm's business, Mr. J. A. Irwin was chosen, and he insisted that if he were to go to Winnipeg he must have as his first lieutenant on the road Mr. H. V. Lawlor, the subject of this sketch. Mr. Lawlor had no objections; he had heard of the attractions and business possibilities of Western Canada, and as it was one of the few parts of the world in which he had not traveled pretty extensively, he was willing to act in the remotest parts of the newer Canada the part of the commercial missionary preaching the gospel of "English" paints.

H. V. Lawlor,
Representing Henderson & Potts in Winnipeg.

Mr. Lawlor has had an interesting history and when he is in reminiscent mood he can spin some capital yarns, but for the purposes of this sketch his modesty baffled the inquiries of the disinterested seeker after truth.

As he was born in St. John, N.B., it was only natural that the sounding sea should have for him irresistible charms. Moreover, like most Maritime Province people, he had a natural fondness for travel; and so, when he thought he had absorbed all that the schoolmaster could teach him, he set out to see the world. In Hong Kong he bartered with Chinamen for tea, in Japan he mastered the mysterious arts of jiu-jitsu, and in the Fiji Islands he observed the civilizing effects of English manners on the guileless natives. But in the end he decided there was no place like the North American continent and that for him the most appropriate "white man's burden" was the grip of the traveling salesman. For an indefinite period of time he traveled from New Brunswick to Florida in the interests of a cigar firm and later he joined the staff of Henderson & Potts Co., Limited, with which firm he has been connected since its incorporation. Having convinced himself at last that he was tired of the roving life, Mr. Lawlor settled down for a couple of years as city traveler in the shadow of Mount Royal and later he covered Western Ontario with Toronto as his headquarters.

Since coming west he has thrown himself into the work with great enthusiasm and his success has been notable. Mr. Lawlor was the first commercial man to reach Edmonton over the C.N.R., a good part of the distance being traveled in a construction car. Hotel accommodation in the west is not always all that it should be, but although in one town he was forced to spend a night on a pantry shelf in lieu of a bed and in another he had to walk the prairie from sunset until dawn, he has never lost his enthusiasm for the work. Good luck, Mr. Lawlor.

PRIZES FOR XMAS DISPLAYS.

HARDWARE AND METAL, for the encouragement of good window displays, has decided to open a competition for its subscribers. Prizes will be awarded for photos or drawings of window displays of Christmas goods and accompanying descriptions of the same. The prizes will consist of:

First Prize **5.00**
Second Prize **3.00**

and $2.00 for every picture and description which is considered worthy of publication.

The competition, which closes on January 15, 1906, will admit of photographs, pen and ink or wash drawings, with good ideas counting more than the pictures, although, of course, all pictures, in order to receive a prize, must be of sufficient distinctness and good workmanship to admit of their publication.

Mark all manuscripts and photographs intended for this department with the words "Window Dressing Competition."

Care should be taken to avoid reflection in the photograph. The best photos are often taken at night.

HARDWARE TRADE GOSSIP

Quebec.

F. W. Miskelly, tinsmith, of Smith's Falls, Ont., was in Montreal this week.

Mr. Fortye, of the Peterborough Lock Manufacturing Co., was a recent visitor to Montreal.

Allan Munro, of the Canada Paint Co., spent a few days of this week in Toronto.

Geo. E. Delorme, tinsmith and plumber, of Sherbrooke, visited Montreal a few days ago.

The Martin-Senour Company, Limited, have entered into business at 142-4 Inspector street, Montreal.

W. C. Springer, representing the Belleville Hardware Co., called on the Montreal wholesale trade last week.

Darcy O'Brien, of Frothingham & Workman's traveling staff, ate his Christmas turkey at Port Hope, Ont.

P. J. Powers, of Powers & Co., boilermakers, Ottawa, was in Montreal recently in connection with his business.

The traveling staff of the Thos. Davidson Manufacturing Co., Montreal, are holding their annual re-union this week.

E. C. Dingman, of Frothingham & Workman, Limited, Montreal, spent Christmas at his home in Stratford, Ont.

J. Chalmers & Son, tinsmiths and plumbers, Granby, Quebec, have sold their premises and are going out of business.

Alex. Chalmers, of Jas. Chalmers & Sons, tinsmiths and roofers, Granby, was among the out-of-town merchants who came to Montreal to buy during the week.

The travelers and heads of departments of the Canadian Fairbanks Co., from Ontario and Eastern Canada, are in conference at the company's headquarters, Montreal, this week.

W. J. Thompson, who represents Caverhill, Learmont & Co., Montreal, traveling west from Toronto to Windsor, was a visitor at the firm's headquarters on Wednesday of this week.

A warehouse used by the Montreal Rolling Mills Company as a storage for wire was burned to the ground last week, the total loss being estimated by the company at $5,000, which was covered by insurance.

Beauty is written all over a calendar given out by Mr. H. G. Eadie, the well known manufacturers' agent, of 22 St. John street, Montreal. The picture portion represents a tall, handsomely gowned woman, showing delicate coloring and shading in the delineation of the costume. The background would suggest a mantle of snow, and the whole portrait is placed in plaque form upon an oval inset, making a very attractive illustration. The card itself is plain and bears the names of the different firms Mr. Eadie represents, while the calendar part is clear and effective.

Ontario.

A winding-up order has been issued against the Dominion Roller Screen Company, Toronto, on the petition of several creditors.

James G. Lorriman, Montreal, associate editor of Hardware and Metal, spent the Christmas holidays with his parents at Thorold.

Mr. James H. Wilson, of the John Ritchie Company, plumbers, Toronto, is laid up and fears of an attack of typhoid are entertained.

Mr. Ed. Dingman, advertising manager for Frothingham & Workman, Montreal, was a caller on Hardware and Metal in Toronto last Tuesday.

Mr. A. W. Waderlow, of the Waderlow Iron Works, Leamington, was a caller at the Toronto office of Hardware and Metal on Wednesday.

Mr. W. G. Ballantyne, of the Toronto office of the Sherwin-Williams Company, spent the Christmas holidays in Montreal, visiting the plant of the company while in Montreal.

Mr. S. A. Crawford, hardware merchant, has opened up a branch hardware store in St. Thomas. The new branch is evidence of the substantial business carried on by Mr. Crawford.

Mr. Albert T. Wing, senior member of the J. T. Gallivan Building Co., which is erecting the buildings of the Plymouth Cordage Company at Welland, died very suddenly last Saturday morning of heart failure.

Fire did very small damage to the wholesale hardware establishment of D. H. Howden & Company, London, last Sunday. Workmen were repairing the roof and the fire was caused by boys lighting the charcoal in the fire pots.

Mr. Geo. L. Pearson, formerly representative of the Sawyer-Massey Company, Hamilton, in Western Ontario, and an active member of the Western Ontario Commercial Travelers' Association, died at Windsor on Tuesday. He was 58 years of age.

Mr. W. C. Rankine, representing the Carborundum Co., Niagara Falls, N.Y., who has made his home in Toronto for several months, reports that the business done by his company in Canada has far exceeded their expectations, and their plant is being enlarged by the erection of two pilms in order to supply the demand for their goods.

Magistrate Jelfs, Hamilton, has dismissed the charges against the sixteen Burrow, Stewart & Milne union stove-mounters, accused of conspiring to prevent Herbert Bowman, a tinsmith, from following his regular occupation. It was held that the evidence did not disclose any breach of the statutes, and that a man could refuse to work with another because the latter was not a union man, without breaking the law.

A $2,000,000 HARDWARE PLANT.

The latest American firm to announce their intention of establishing a Canadian branch for the manufacture of their goods is Sargent & Co., of New Haven, Conn. Representatives of the company are to visit Canada in January, visiting Hamilton, Ottawa and other cities in looking for a site for their proposed factory. The company say that they will erect a $2,000,000 plant in Canada and the industry therefore is a very large and desirable one.

LEWIS BROS.' DINNER.

Lewis Bros., Limited, gave the second annual dinner to their travelers at the Engineers' Club, Montreal, Friday night of last week. Nearly all the traveling representatives of the firm were present, and all responded eloquently to the request for speeches. There were twenty-six seated at the table, which was presided over by F. O. Lewis, the president of the company.

THE CHRISTMAS TRADE.

Reports from some parts of the country are that the holiday business has failed to come up to expectations owing to the mild and open weather. This has not been a general condition, however, but even though it were the almost universal prosperity should be enough to encourage the trade to look forward to another "fat" year's trade in 1906. Lack of trade during the holiday season only means that the buying public will have more money to purchase necessities during the balance of the Winter season.

DEATH OF CUSTOMS APPRAISER.

Hardware circles in Montreal, and, indeed, throughout the country, will be pained to learn of the death at the Royal Victoria Hospital, Wednesday afternoon, of Mr. James H. Douglas, who for twenty years has held the position of hardware appraiser of customs at Montreal.

Mr. Douglas was born in Quebec, his father being Mr. John Douglas, merchant, of that city. Coming to Montreal in 1866, he engaged as traveler with Wm. Darling & Co., then a prominent wholesale hardware house. He later went to Alex. Ferguson & Co., paint and oil merchants, and finally went into the paint and oil business for himself. Twenty years ago he retired from business and was appointed to the service of the Canadian Government as hardware appraiser of customs at Montreal. In this capacity he became well known to all hardware men of the east, and as he was also a member of the Dominion Board of Appraisers, his acquaintance extended well over the entire country.

A little over a year ago Mr. Douglas underwent a severe surgical operation, with apparent success. A recurrence of the same trouble, however, made it necessary for him to again submit to a similar operation, which was performed last Wednesday. After lingering for a time Mr. Douglas succumbed exactly one week after the operation.

Mr. Douglas left a wife and one daughter. His brother, Mr. R. J. H. Douglas, is also well known to the hardware trade, through his connection with Caverhill, Learmont & Co., Montreal.

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 62.)

THE WEEK'S MARKETS IN BRIEF.

TORONTO.

Brass Goods—American prices have advanced 10 per cent., and the rise is likely to be followed here.

Red Lead—An advance of ¼c. is reported.

Horse Nails—A revised list has been issued by the Canada Horse Nail Company. Discounts remain the same.

Pig Lead has advanced 25c. and is now quoted at $4.85.

Zinc Spelter—Foreign spelter has advanced ¼c.

MONTREAL.

Jenkins' Valves are now quoted at 42½ per cent. off list.

Ingot Copper is selling at from 20½c. to 21c.

Pig Lead has jumped up to $4.75 and $4.80.

Red Lead has advanced about 25c.

Lead Pipe—Discount is now 20 per cent. off list.

Horse Nails. A new price list has been issued by the Canada Horse Nail Company.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Dec. 29, 1905.

STOCK-TAKING is in full swing at all the wholesale warehouses here, and the natural lull in business following Christmas is being utilized in this way to keep the staffs busy.

All the travelers are now either at headquarters, or at their own homes, so that orders coming in are entirely by mail. Next week will see the opening of the 1906 campaign, an event which will be marked by great extensions of territory, on the part of most of the local jobbers.

The quietness of business during the week has been instrumental in preventing fluctuations, the only price change noted being in Jenkins' valves. Discounts are now quoted as 45 per cent. on globe, angle and check valves, thus showing an advance.

Axes — Our prices remain as follows: Chopping axes, unhandled, $6.00 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—We quote: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Hay Wire—The tendency is still upward. Current quotations are: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b., Montreal.

Sewing Machines—Trade is, of course, quiet just now. We give prices: Hand-sewing machines, $11 each, net: complete machines, with stand, $18.00 and up, according to quality.

Lanterns—There is, as yet, no disposition to change prices manifest. Our prices are: Cold blast, $4.50; No. 0 Safety, $5.00.

Rivets and Burrs—We make no alterations in the prices given out two weeks ago. We are still quoting as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 40 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—Ruling prices are as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—We are giving the following quotations: 3-8 and smaller, 60 to 10; 7-16 and larger 55 and 5.

Horse Nails—Last week's prices are unchanged. We quote as follows: C brand, 40, 10 and 7 1-2 per cent.: M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent

Wire Nails—The price is again given as $2.15 per keg f.o.b. Montreal.

Cut Nails—Trade is dull at unchanged prices. We quote: $2.20 per keg f.o.b. Montreal.

Horseshoes—We give the following prices: P.B. New Pattern, base price, $3.50 per 100 lbs., M.R.M Co. latest improved pattern iron shoes, light and medium pattern No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern. No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $4, No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85 Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes, 25c.

Sporting Goods—We are quoting as follows: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.. American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred pounds; chilled, $7.00 per hundred pounds; buck and steel, $7.50 per hundred pounds; ball, $8.00 per hundred pounds. We quote discounts 10 per cent. on shot, f.o.b., Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—The trade is very quiet. Prices remain as before, and may be consulted in our current market quotations.

Cement and Firebrick—Sales are few and of small volume. We are quoting: $1.80 to $1.90; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2.00 to $2.10 ex-cars; Canadian Portland, $2.00 to $2.05. Firebrick, English and Scotch, $17.00 to $21.00; American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags, $2.05 in barrels in round lots.

Coil Chain—Our prices are as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3.00; 1 inch, $2.95.

Shot— The price, as amended last week, has held firm and we still quote net list.

Skates—There is, naturally, a reaction in this branch of the business, the demand having now become quiet. Our prices are from 25c. to $2.50, according to quality.

Sleigh Bells—We quote: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape, $1.15 to $2.00; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2.00; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—The various grades are still selling well. We quote: Jute, unlined, $4.50; 3-4 lined, $9.50; full lined, $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snowshoes— There is now but one grade which can be supplied in any quantities, owing to the great demand this year. Prices vary from $15 to $35 per dozen pairs, according to quality.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, Dec. 29, 1905.

HOLIDAYS have stopped the lively business and the staffs of the jobbing houses are busy stock-taking. Considerable business is still being done, however. Reports from some quarters are that Christmas trade was affected adversely by the long stretch of mild and open weather. This is largely a local condition, however, and affecting only certain lines of goods, such as skates, sleigh bells, etc. Jobbers state that the heavy buying before the holidays indicates that trade on the whole was eminently satisfactory.

The Canada Horse Nail Co. have issued a revised price list which goes into effect on Jan. 1.

Axes and Handles—A normal trade is being done with prices the same.

Cutlery—The volume of the season's business has been very large and prospects for the coming season are good.

Sporting Goods—Shotguns and ammunition are having a fair sale.

Washing Machines—The outlook for next season's business is satisfactory.

Chain — We are still quoting prices as follows: 1 inch, $6.50; 5-6 inch, $4.45; 3-4 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—We are still quoting as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire—Quotations continue as before quoted: $2.42 1-2 f.o.b. Cleveland. In barb and coil spring wire a seasonable trade is being transacted.

Wire Nails—A good trade is reported at the advanced prices. We are quoting $2.25 with the usual 10c. rebate.

Cut Nails — A satisfactory volume of business is being done. We still quote: $2.40 per keg f.o.b. Toronto.

Horse Nails—New lists have been issued on "C" brand horse nails. Discounts remain the same, however.

Horseshoes— Trade continues brisk; prices firm. We quote: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7.00. If shipped from factory 15c. less.

Horse Blankets—Halters, girths, horse blankets and similar goods are moving satisfactorily.

Skates and Sleigh Bells— Continued open weather has caused a falling off in trade.

Skates and Sleigh Bells—The coming of snow and ice has created many sorting orders and shipments are large.

Screws—Advancing prices in metals make the market very firm, but prices are unchanged.

Rivets and Burrs—Copper rivets and burrs have advanced, but iron goods are unchanged.

Bolts and Nuts—Stocks are light and prospects for 1906 are for a heavy trade.

Cordage—Sorting orders are plentiful. We still quote: Manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 9c.

Cement—Prices are unchanged and trade is seasonable. Our prices are: For carload orders f.o.b. Toronto, Canadian Portland, $1.90 to $2.00; American Portland, $1.90 to $2.00. For small orders ex warehouse, Canadian Portland, $2.10, American Portland, $2.10.

Firebrick—Prices continue as before: English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c.; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—A fair trade is being done, the open weather keeping the demand lively. Prices are the same.

Hides—The general tendency of the market is one of weakness. Country hides have fallen 1-2c. to 1c. There are still indications of increased arrivals, whilst demand is only maintained at steadying point, so that the strengthening feature is absent. Chicago is continuing firm at previous low basis, but shows little indication of advance. We quote:

Hides, inspected, steers, No. 1	0	11½
" " " No. 2	0	10½
" " cows, No. 1	0	11
" " " No. 2	0	10
Country hides, flat, per lb.	0 09	0 09
Calf skins, No. 1, selected	0	13
" " No. 2	0	11
Sheep skins	1 20	1 25
Deer skins, green	0	13
" dry	0	22
Moose hides, green	0	08
Horse hides, No. 1	3 00	3 25
Rendered tallow, per lb.	0 04	0 04½
Pulled wools, super, per lb.	0 22	0 24
" " extra "	0 24	0 25

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL.
232 McGill Street,
Montreal, Dec. 29, 1905.

METAL merchants here are busier this week than ever before during the holiday season. Christmas Day made some slight difference, naturally, but the demand has kept up in an astonishing manner.

During the past week, the upward trend of the market was resumed, with several advances in evidence. The most remarkable change is in pig lead, which was last week reported to have declined in value. Not only has it recovered its strength, but a jump to the highest figures yet, is recorded this week. This refers to Canadian as well as to imported pig.

Ingot copper has also gained strength during the week, and has advanced about a half cent. The direct result of continued advances in this metal will be seen after stock-taking, when revised lists on all brass goods are almost certain to be issued. Other metals remain unchanged in price, and are all in first class demand.

Canada Plates—Our prices remain as follows: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75; galvanized, 52's, $4.10; 60's, $4.35.

Copper—This metal is now a little stronger than at our last report and the price for small quantities has been advanced 1-2 cent. We quote: Ingot copper, 20 1-2c.; sheet copper, base sizes, 25c.

Ingot Tin—A good demand is keeping prices steady. We quote: 39 1-2c. to 40c.

Pig Lead—A reaction from last week's decline has occurred, and we now give the highest figures yet touched by this metal. We quote: $4.75 to $4.80 per hundred pounds.

Boiler Tubes—The situation in tubes remains about the same. The mills refuse deliveries under eight or ten weeks. We quote prices as follows: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—Conditions are unchanged. We are quoting:

"Dom.," No. 1, $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal.
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	23.00	"	"
" (special)	22.00	"	"
Summerlee No. 1	23.50	"	"
Clarence No. 1	20.00	"	"
" No. 3	19.50	"	"

Tool Steel— We quote: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed Steel, 60c.

Merchant Steel—We are still quoting: Sleigh shoe, $2.17 1-2; tire, $2.27 1-2; spring, $2.75; toecalk, $2.82 1-2; machinery iron finish, $2.27 1-2; ruled machinery steel, $2.75; mild, $2.17 1-2 and upwards; square harrow tooth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

Cold Rolled Shafting—We quote: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron—The following quotations are held steadily. Queen's Head, 28 gauge, $4.25; 26 gauge, $4.00; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4.00; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.25; Comet, 28 gauge, $3.85; 26 gauge, $3.60; 22 and 24 gauge, $3.35; 16 to 20 gauge, $3.10; Bell brand, 28 gauge, $4.20 to $4.25; Gorbal's "Best Best," 28 gauge, $4.10. "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots 25c. extra.

Black Sheets—We are still quoting. 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

Antimony—Prices in the Old Country continue high, but, as yet, dealers have not advanced their figures here. We quote 14c. to 14 1-2c. for Cookson's.

Tin Plates—We quote the following prices: Cokes, base size, 1C, 14 x 20, $4.00; charcoal, base size, 1C, 14 x 20, $4.25.

Terne Plates—Our prices remain at $6.85.

Ingot Zinc—Conditions remain just as before, and we are quoting 7c. to 7 1-4c.

Sheet Zinc— We still quote 8c. in casks; 8 1-4c. in less than casks.

Sheet Lead—We are quoting: 2 1-2 lbs., 5 1-2c. by the roll; 3 lbs. and heavy-

ier, 5 1-4c. by the roll; large quantities, 25c. per hundred pounds.

Bar Iron—The local situation is the same as last week. We are quoting $1.97 1-2 f.o.b. Montreal.

Old Material—The demand for scrap copper and brass keeps quite brisk, but there is not a great deal of activity in other metals. Rubber is still an uncertain quantity. We quote: Copper wire, 14 3-4c.; light copper, 13 3-4c.; heavy red brass, 12 1-2c.; yellow brass, 9 3-4c.; light brass, 7c.; lead, 3c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $11; mixed rags, 75c. to 90c. per 100 lbs.; old rubbers, 7 1-4c. to 7 1-2c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, Dec. 29, 1905.

PIG lead shows another advance this week and is now close up to the record figure of 5c. per pound. This week's advance brings it up to $4.85 at which it is held firmly. Zinc spelter (foreign) has also jumped up 1-4c. and is now quoted at 7 1-4c. All ingot metals are very firm and trade is active in these lines as well as in galvanized sheets and tin-plates, the open weather being a factor in keeping up the demand for these materials.

The holidays have affected trade considerably, but this week's business is most satisfactory in comparison to similar weeks in previous years. Stocks of goods in the hands of retailers are very light and buying is done in small quantities at present because of the desire to end the year with a clean sheet. After the holidays very active trade is anticipated.

Pig Iron The holidays have caused a falling off in trade but stocks are light and brospects for the year bright. We quote:

Middlesboro, f.o.b., Toronto	$22 50
Hamilton, No. 1, at furnace	20 00
" No. 2, "	19 50
Midland, No. 1, "	20 00
" No. 2, "	19 50
Radnor, at furnace	31 50
Londonderry, f.o.b Toronto	21 50

Bar Iron—Stocks are light and trade satisfactory. The outlook for 1906 is bright. We still quote: $2.00 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

Ingot Tin—The market is very active with prices the same. We quote 40c.

Tin Plates—Demand continues strong the open weather encouraging trade. Prices are very firm.

Galvanized Sheets—Conditions are unchanged, the demand being heavy at the same quotations.

Brass—Business is satisfactory, discounts continuing at 10 per cent.

Lead—Another advance of 1-4c. has been made for pig lead. We quote as follows: Pig lead, $4.85 per 100 lbs., and bar lead, $5.00 per 100 lbs.

Zinc Spelter—Prices have advanced 1-4c. and 7 1-4c. is now being quoted for foreign. We quote: 7 1-4c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—Sheet copper holds steady and buying is heavy with stocks not very large. We are quoting as follows: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

Antimony—We still quote 15c. per pound.

Old Material—Goods are moving actively for this season, copper being in strong demand. Dealers' buying prices are as follows: Heavy copper and wire, 14c. per lb.; light copper, 13c. per lb.; heavy red brass, 12 1-2c. per lb.; heavy yellow brass, 10c. per lb.; light brass, 8 1-2c. per lb.; tea lead, $3.00 per 100 lbs.; heavy lead, $3.25 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $10.50, No. 2 wrought $3 to $5; machinery cast scrap, $15; stove plate, $10; malleable and steel, $5; old rubbers, 7c. to 7 1-4c. per lb.; country mixed rags, 75c. per 100 lbs.

Coal—Prices keep very firm and the railways are not moving as much as could be expected with the present open weather. We quote: Anthracite in cars at bridges, grate, $5.50 per gross ton; pea, $3.75 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.70; 3-4 inch, $1.60, run of mine, $1.40; nut, $1.25: N.P. and S., $1.00; slack, 75c.; box cars 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.80; 3-4 inch, $2.70; mine run, $2.60; slack, $2.35.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, December 26, 1905.

Pig Iron— Cleveland warrants are quoted at 53s. 7 1-2d and Glasgow Standard warrants at 52s. 7d, making prices as compared with last week 10 1-2d higher for Cleveland warrants and 10d higher for Standard warrants.

Tin— Spot tin opened weak at £162 10s, futures at £161 10s, and after sales of 100 tons of spot and 250 tons of futures closed weak at £162 10s. for spot and £161 10s. for futures, making price as compared with last week £3 4s. 6d lower on futures.

Copper—Copper opened easy at £79, futures £78 10, and after sales of 25 tons of spot and 200 tons of futures closed easy at £79 for spot and £78 10s. for futures, making price as compared with last week 5s. lower on spot and 7s. 6d lower on futures.

Lead—The market closed at £17 10s., making price as compared with last week 10s higher.

Spelter—The market closed at £28 12s. 6d, making price as compared with last week unchanged.

RAILROAD CAR BUILDING.

THIS is the era of big things in railroads, and the statement applies as well to all companies having anything to do with the manufacture of railroad equipments. From a recent article in the New York Commercial regarding the Pressed Steel Car Co., much interesting information is gathered. This company now has $60,000,000 in orders on its books because of the great prosperity of railroads of the United States, and 1905 promises to be the banner year in car building. Orders will largely exceed those of 1902, which was the biggest year in that line. Up to the third week in October of this year orders for 225,000 cars have been booked. Estimating the orders for the remaining portion of the year on the same basis the total for 1905 will be about 275,000 cars. This compares with 136,000 booked in 1904, 108,000 in 1903, and 195,000 in 1902. The use of steel cars on the railroads of the United States and Canada, is described as continuously on the increase. The Pressed Steel Car Co. has an order footing up $10,000,000 from the Grand Trunk Pacific Railway, which will be handled at the company's Montreal plant operated under the name of the Canada Car Co.; one of $14,500,000 from the Pennsylvania Railroad, and one of over $5,000,000 from the New York Central Railway. The Pressed Steel Car Co. is a consolidation of the Schoen Pressed Steel Co. and the Fox Pressed Steel Equipment Co. The Western Steel, Coal & Foundry Co. and the Canada Car Co. are subsidiary corporations of the Pressed Steel Car Co. The capital of the Canada Car Co. is $3,000,000, of which $1,000,000 is preferred and $2,000,000 common. These works will have a capacity of 20 freight cars every day, and five passenger cars every month, and in addition to this can turn out car wheels and other car belongings of considerable importance.

Nearly 2,000 leases granted for mining properties throughout Ontario are to be cancelled by the Provincial Government, through failure of the holders to carry out the conditions of their leases.

* * *

Evidences of a revival of silver mining in British Columbia are very encouraging. Many properties which have been shut down for several years are to be developed on a large scale, owing to the high prices lead is now commanding in the metal markets.

* * *

The Maritime Coal & Railway Co. have had the matter of establishing a power plant at Maccan under consideration for some time. The plan has been discussed at some length with various manufacturers of Amherst and has received their approval to such an extent that the company proposes bringing an electrical engineer to Maccan to go into the matter in detail. The company has already secured the right of running wires to Amherst, and the manufacturers, especially the smaller ones, will receive cheap power when the plant is in shape.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, December 28, 1905.

The open Winter thus far has been a blessing to the iron industry, since it has permitted the railroads to handle the enormous tonnage of raw materials and of finished product without a hitch, and has allowed outdoor work to be continued almost uninterruptedly. It has had its effect, too, in the markets for old material, which has come out in good volume.

In all the principal distributing markets for pig iron the volume of new business has been comparatively small. The pressure for deliveries of pig iron, however, is persistent, and there is ample evidence of the fact that the rate of melting is even exceeding the expectations of founders and steel makers. There is considerable manoeuvering going on on the part of buying interests, and the east iron pipe makers in particular are now feeling the market. The cast iron pipe trade promises to exceed in volume any previous record and it is possible that for the first time in the history of the industry the productive capacity may prove inadequate. The contract for 30,000 tons of high pressure pipe for this city has been virtually closed. The Warren Foundry has received the order for 8,000 tons of 48-inch pipe. To-day the Borough of Richmond will open bids for 8,000 tons additional.

The run of rail orders is excellent. The order for 52,000 tons for the Erie is now arranged. With a lot of 16,000 tons for the Florida East Coast Line, 5,000 tons for the Western Maryland and from 20,000 to 25,000 tons for trolley lines the aggregate tonnage comes pretty close to 100,000 tons. It is of interest to note that the Chicago mill has been forced to transfer 100,000 tons of its bookings for 1906 to the Carnegie plants, being unable to handle it.

A leading interest has purchased during the past two weeks upward of 25,000 tons of old steel rails for re-rolling into light rails, thus withdrawing from the market raw material upon which the smaller rolling mills depended. It has had the effect at the same time of stiffening up the price on light rerolled rails.

The eastern plate trade has been a keen disappointment lately. In conjunction with our Atlantic coast shipbuilders a special effort was made to secure the contract for building a tank steamer for the Standard Oil Company. It was found, however, that the prices of foreign shipbuilders were so much below those of the Americans that the work had to be placed abroad.

Little new work was placed during the past week with the structural mills. A somewhat significant fact is that all the bids for the 11,000-ton county building at Chicago have been rejected as being too high.

An interesting contract for steel castings is to be let within the next few days. The American Locomotive Company is now receiving bids for the steel castings for its locomotive work to be delivered during the coming year. The company will require about 30,000 tons, to be delivered at the rate of 2,500 tons a month.

The demand for export continues excellent, particularly in the wire products. Among the recent sales is one lot of 10,000 tons of girder rails for Rio Janeiro, 17,000 tons of sheet bars for the second half of 1906, bridges for Cuba and Japan, and the material for a theatre at Panama.

"Empire" shingles

New trade and added profits await dealers who handle "Empire" Metallic Shingles and go out among their townsmen who contemplate building, determined to have their orders.

Many people keep right on using old fashioned wood shingles from sheer force of habit, no one having taken the trouble to show them the advantages of "Metallic" Shingles over wood. Don't you think you can convince some of them of the fireproof, lightning proof, storm proof and rust resisting qualities of "Empire" Shingles, and put some profits into your pocket that now go to competitors? The facts are so self evident that it requires minimum selling effort to get many good orders for "Metallic" building material.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto and Winnipeg

We also manufacture:
- "Eastlake" Metallic Shingles
- "Metallic" Ceilings and Wall Plates
- "Metallic" Cornices, Skylights and Ventilators
- "Metallic" Sheet Metal Fronts
- "Metallic" Siding, (Stone, Brick, etc.)
- "Impervia" Fireproof Windows
- "Metallic" Crestings and Finials
- "Hayes" Metallic Lathing
- "Metallic" Corrugated Iron
- "Metallic" Eavetrough and Conductor Pipe
- "Metallic" Pressed Zinc Ornaments
- "Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

417

Nova Scotia Trade News

Halifax, N.S., Dec. 27, 1905.

Jobbers report collections very good, but business in all lines is very slack. During the week there was a good demand for skates, but otherwise trade is quiet.

* * *

Encouraging reports have reached the city from the gold mines at Isaac's Harbor. The mines there are being developed quite extensively and the returns are good, the average monthly output being valued at from $12,000 to $15,000.

* * *

The regular quarterly meeting of the Maritime Hardware Association was held at the Halifax Hotel in this city, during the week. The members of the executive present were: J. McAvity, St. John; T. C. Lee, of Thorne & Co., St. John; H. M. Coates, of S. Hayward Co., St. John; John Keefe, of J. Robertson, St. John; E. K. Spinney, of Yarmouth; W. G. Robertson, of Wm. Robertson & Son, Halifax; W. H. Sterns, of H. H. Fuller & Co., Halifax; W. B. Arthur and M. O. Crowell, of Halifax. The business transacted was of the usual routine description. The price list was considered and several changes proposed.

* * *

The powder tests being carried on at Glace Bay by the Dominion Coal Co's officials, committees from the various lodges and the Deputy Inspector of Mines, are not yet completed. All the collieries have been visited and tests have been made with Bulldog, Boblinnite and Pellet powder. Robrite and another powder, said to be flameless, are still to be tested. The test, however, is not likely to be made at all the mines; probably only at No. 2 colliery, where their efficacy will be tried this week. A decision on the powder question will probably be announced some time after the new year.

* * *

The price said to have been paid for J. P. Smith's coal mine at Maccan, by a syndicate of well-known capitalists, organized as the Eastern Coal Co., is $60,000. The property is very near Maccan Station, on the I.C.R., and separated from that line only by the main post road. Mr. Smith had taken out about 40,000 tons of coal, loading it on the cars of overhead trestle leading from the pit mouth. The new company will erect a permanent trestle work for the same purpose, and equip the colliery immediately for an output of 500 tons a day. The general manager is William Munns, Toronto, and the mine's manager Robert Archibald, C.E., of Amherst. The directorate is composed of J. K. Kerr, Wm. Dineen, Hon. Richard Harcourt, M.P.P., Toronto; J. B. Tudhope, M.P.P., Orillia; E. J. H. Eckhardt, Toronto. A. A. Laurie, of Toronto, is the secretary-treasurer. The company has also purchased an adjoining property on which coal has been found, which promises excellent result. They struck a seam of coal there last week eighty feet south of the place where the boring took place before. The seam was struck at a depth of one hundred and forty-two feet. This section of the Cumberland coal fields will be a hive of industry next Spring.

BEFORE you are many days older, you'll have a copy of our new Brush Book,—shows more kinds of better brushes than any supply house ever sent you yet—fact!

Right on the heels of the book you'll probably see our salesman,—he may mention brushes to you,—please be good to him.

If he and the book don't show you,—don't prove to you—that we can sell you more brush quality for every dollar than you ever bought before, don't be good to him, and do throw away the book.

We have bought our stocks at prices that must have hurt somebody badly,—but don't you care for that. We have closed out some big makers for spot cash,—others we've taken whole outputs from in carlots.

Never had such a brush stock—never were fixed to quote so low for such values. Assortment is big enough for any dealer,—no matter what kind of a trade he sells,—prices are where you won't think twice of competition. Big talk—but true talk.

And every brush we sell we guarantee,—that means we replace any brush that any customer of yours kicks about, if the kick is halfway reasonable.

Please read the book, when it comes,—and talk to the man, when he comes.

If you happen to want anything between now and then, our mail order department will take mighty good care of you,—it ships every order the day we get it, and the same old Stephens guarantee covers all it ships.

G. F. STEPHENS & CO.
LIMITED
WINNIPEG, CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Dec. 29, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

Business conditions in the metal and hardware list continue remarkably good, better, in fact, than at this period a year ago. Values continue firm with but a few minor changes. As in all other lines of trade, the increased movement of money following the prosperous year throughout the west is making itself felt in this department. Collections are reported fairly good.

Game Traps—A few game traps are still selling. Prices are unchanged. We quote:

H. & N., discount	50 and 5 p.c.
Victor, "	66⅔ p.c.
Newhouse, "	35 p.c.
Bear	$7 each

Lanterns—The market is "open" and it is hard to quote with anything approaching to exactitude. The average prices are about as follows:

Cold blast lanterns	$5 25 per doz.
Coppered cold blast lanterns	7 25 "
Cold blast dash "	7 75 "
Lift Lanterns	4 25 "

Bluestone—Price for 1906 delivery is $6.50 per cwt.

Wire—Prices are steady. We quote:

Barbed wire, 100 lb					$3 00
Plain galvanized,	6 to 8	$3 39	9	$2 50	2 90
" "	10	3 50	12		3 10
" "	13	3 20	14		3 90
" "	15	4 45	16		4 60
Plain twist					3 00
Staples					3 50
Oiled annealed wire,	10	$2 96	11		$3 02
" "	12	3 10	13		3 20
" "	14	3 30	15		3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—Prices have been steady since the recent advance in steel shoes. Quotations are as follows:

Horseshoes, iron, No. 0 to No 1	$4 65
No. 2 and larger	4 40
Snow shoes, No. 0 to No. 1	4 90
No. 2 and larger	4 65
Steel, No. 0 to No. 1	5 00
No. 2 and larger	4 75

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—The price has been steady since the recent decline to $2.60 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Pressed Spikes—Prices are firmly held at following quotations:

Pressed spikes, ¼ x 5 and 6	$4 60
" " 5-6 x 5, 6 and 7	4 25
" " ⅜ x 6, 7 and 8	4 10
" " 7-16 x 7 and 9	4 00
" " ½ x 8, 9, 10 and 12	3 90
" " ⅝ x 10 and 12	3 75

Screws—No change in price. Demand continues brisk at following unchanged discounts:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged and continue as follows:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	32
" No. 12	37

Coil Chain—Unchanged in price. We quote:

Coil chain—

3-16 inch	$9 25	¼ inch	$7 20
5-16 inch	5 20	⅜ inch	4 60
7-16 inch	4 45	½ inch	4 30
⅝ inch	4 10	¾ inch	4 00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discounts are now 60 and 5 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g.hickory, doz			$3 15
No. 1	1 90	No. 2	1 60
Octagon extra	2 30	No. 1	1 60

Axes—Prices are quoted as follows:

Bench axes, discount off list	40 p.c.
Broad " "	25 p.c.
Royal Oak, per doz	$ 6.25
Maple Leaf, "	8.25
Model "	8.50
Black Prince "	7.25
Black Diamond "	9.25
Standard Flint Edge, per doz	8.75
Copper King, per doz	9.00
Columbian, "	10.75
Handled axes, North Star, per doz	7.75
" " Black Prince, per doz	9.25
" " Standard Flint Edge, per doz	10.50
" " Copper King, per doz	11.00

Butts—The discount on wrought iron butts is 70 per cent.

Churns—The discounts from list prices are 45 and 5 per cent.

Chisels—Quoted at 70 per cent. off list prices.

Auger Bits—Discount on common auger bits is 65 per cent.

Blocks—Discount on steel blocks is 35 per cent. off list prices; on wood, 55 per cent.

Fittings—Discounts are quoted as follows:

Wrought Couplings	60 p.c.
Nipples	65 and 10 p.c.
T'sand elbows	10 p.c.
Malleable bushings	50 p.c.
Malleable unions	60 p.c.

Grindstones—The price is now 1 3-4c. per lb.

Fork Handles—The discount is 40 per cent. from list prices.

Hinges—The discount in light "T" and strap hinges is 65 per cent. off list prices.

Hooks—Prices are quoted as follows:

Brush hooks, heavy, per doz	$8.75
Grass " per doz	1.70

Draw Knives—The discount is 70 per cent. from list prices.

Rules—Discounts are 50 and 10 per cent.

Washers—On small quantities the discount is 35 per cent.; on full boxes it is 40 per cent.

Wringers—Prices are as follows:

Royal Canadian, per doz	$30.00
R. B., per doz	34.75

Files—Discounts are quoted as follows:

" Arcade "	75 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

Building Paper—The big rush is of course over, but there is still a steady sale at unchanged prices. We quote:

Joliette, plain	40c.
" tarred	65c.
Cyclone, plain	55c.
" tarred	80c.
Anchor, plain	55c.
" tarred	65c.
Pure fibre, plain	60c.
" " tarred	80c.

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—The price is steady since the recent advance. We quote as follows.

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 75
Lathyarn	11 25

Solder—Quoted now at 21c. per lb. with concessions for large quantities.

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.
(Lengths 3, 4, 5 and 8 ft.)

	Painted	Galvanized
28 gauge	$2 85	$3 90
26 "	3 10	4 15
24 "	3 80	5 40

(Any lengths under 4 ft. 10c. per square additional.)

	Painted	Galvanized
28 gauge pressed seam	$3 00	$4 20
28 " "V" crimp	2 95	4 15

SIDINGS.
(Plain brick, rock face brick or stone 17¼ x 23.)

16 to 95 "	17.30
6 to 100 "	

British Columbia Trade News

Vancouver, Dec. 22, 1905.

The return of Mr. B. W. Greer, general freight agent of the C.P.R., from a conference with the chief officials of the company at Montreal, was not marked by any announcement with regard to the vexed question of freight rates. As far as the boycott instituted by coast shippers, Mr. Greer was drawn into stating that the company did not intend entering upon any reprisals. Further than that he would say nothing. From present prospects it is very likely that the business men will send a representative to Ottawa to appear before the Railway Commission.

* * *

Coast lumber mills will continue to get their supplies of logs, when they buy from outside parties, by negotiation with the individual logger. There was a proposal on foot to form a selling combine of all the independent loggers, the central agency to deal with the mills. This was to be in effect similar to the shingle pools, in which all the shingle mills are merged, a central agency disposing of the output.

The loggers were unable to effect a combination of interests and the project has fallen through. At the present season, as usual, there is a shortage of logs, owing to broken weather, and the fact that the holiday season attracts a large number of men from the woods every Winter. When they have had their holiday they will return to work, and the output of logs will get closer to the normal production. Lumber mills and factories report all the business they can reasonably handle, and it looks as if the big mills will find it hard to make time to shut down for the annual clean-up and overhaul.

* * *

Premier McBride, who returned from the east yesterday, has given it out in very confident terms that the Grand Trunk Pacific has surely decided on Tuck's Inlet as their northern coast terminus. A part of Kaien Island, granted to the company by the Government, is to be included in the terminus site. The Premier says he never had any doubt of the location. Tuck's Inlet, in the opinion of the company's engineers, is much the best location for harbor facilities of all places on the northern coast. The date of beginning work at this end is yet unknown.

* * *

Construction on the new C.P.R. hotel at Victoria is progressing rapidly, despite the fact that it is the Winter season. Day and night the big stone-sawing machine is kept going, and even on Sunday work only ceases for the twelve hours including the middle of the day. In the evening work goes on again. The superstructure is up to the third storey, steel framework being used throughout, and the outside walls being of dark pressed brick and cut stone. The hotel will out-rival anything in Canada.

* * *

Recent quotations indicate a stiffening in steel products in the United States. Rails are going up on account of big building projects, and the demands of British Columbia alone are to be considerable in the coming year. The steel is likely to be all laid next year on the C.P.R.'s branch into the Similkameen, the Great Northern's extension into the same district, and the Midway-Vernon line, now under construction. The prospects are also that the V., W. & Y. will build north from Vancouver at least part of the way.

* * *

Lumbering in the mountain section or interior of the province seems to be enjoying its due of the general prosperity. Crown Timber Agent Leamy, of New Westminster, who has just returned from a tour of inspection among the mills in the railway belt, reports each and all running to full capacity. Evidence of increasing business is to be found in the busy scenes wherever he went on his tour.

* * *

The most celebrated water record case ever heard in this province has been going on for nearly a month before Mr. Justice Duff at Victoria. There are really two trials, each being in the nature of an application for an injunction, asked for on behalf of the Esquimalt Waterworks Co., to restrain the Commissioner from giving a record of water to the city of Victoria in one case and the Victoria Power Co. in the other. Both the city of Victoria and the Victoria Power Co., the latter a subsidiary concern belonging to the British Columbia Electric Railway Co., applied for record of water on Goldstream River, the claim set up in each case being that there was a surplus beyond what the Esquimalt Waterworks Co. was entitled to under the special act of the legislature which incorporated it. In the injunction proceedings, which have drawn nearly to a close now, the claim has been set up that the waterworks company did not file record of the water it is using in the way set down by the Water Clauses Act. It is further argued that in selling power, or generating power, with the water it uses, the company has exceeded the powers conferred by its special act. As the question of an increased supply of water for domestic purposes, and also of increasing the power capacity of the British Columbia Electric Railway Co., depends on the decision, the case has been followed very closely and every point argued out exhaustively.

FOUNDRY AND METAL INDUSTRIES

REVIVAL OF MINING IN CANADA.

The mining situation in Canada is at the present time a great deal more promising than it has ever been, says the Canadian Mining Review. In Nova Scotia the outlook for the iron and steel industry has considerably improved. The condition of the coal trade is also encouraging, and it is anticipated that business this Winter will be exceptionally good.

In Quebec asbestos mining is very active in the Eastern Townships, it being estimated that the profits of three companies alone will be approximately three-quarters of a million dollars, while the new discoveries of gold, copper and asbestos in the Chibogamou region should, provided the mining laws of the province are amended to afford proper encouragement to prospecting and development, stimulate renewed endeavor along these lines and help revive interest in the mineral resources of what is undoubtedly a rich country.

In Ontario a period of unprecedented mining development may be anticipated for the near future, as a result not only of the important new discoveries at Cobalt, but in other mining sections of the province, notably the western gold fields. There also appears to be an increasing disposition on the part of capitalists to invest money in the opening up of undeveloped properties. There can be no doubt that the promised revision of the mining laws, in accordance with the views of those chiefly concerned in the development of the mineral resources of the province, will be the one thing required to place the industry on a sound and substantial footing.

The outlook in British Columbia is equally gratifying. Production is generally on the increase, so much so that the smelting works are being taxed to their utmost limits, making necessary the re-operation of the long disused works at Pilot Bay, Kootenay Lake, as well as the smelter at Crofton on Vancouver Island. The most convincing proof, however, of improvement is the gradual increase in the number of profit-earning mines.

Although the Yukon gold yield has, of late years, steadily diminished, by means of the gradual working out of the rich creeks in the vicinity of Dawson, it is by no means unlikely that the prospecting now being systematically carried on in the territory, will not fail to discover new gold areas. On the whole, the mining industry in Canada appears to be about to commence a new chapter in its history, which will be noteworthy as recording a period of remarkable prosperity and considerable expansion.

Hustle while opportunities are open. Prepare for emergencies when business drags.

DOMINION COMMERCIAL TRAVELERS' ASSOCIATION ANNUAL MEETING.

THE annual meeting of the Dominion Commercial Travelers' Association was held on Saturday evening, December 16th, at Karn Hall, Montreal. There was a good turnout of the commercial missionaries and the hall was hazy with the fumes of the Concha Regalias. It was also haze with something else besides the fragrant perfume of Havanas, and things at one time were very lively. Of this more anon.

President Jas. S. N. Dougall occupied the chair. With him on the platform were Past Presidents Hon. J. D. Rolland, David Watson, Max Murdoch, Jas. Robinson and Messrs. W. J. Egan, Fred L. Cains, E. D. Marceau, R. C. Wilkins, Jos. Rosseau, Jos. Dubreuil, Fred Dugan, W. B. Mathews, Arthur Terroux, W. Hayes.

Successful Year's Work.

The report of the board of management showed a present membership of 5,185, an increase of 370 during the year. Since the last annual meeting forty-eight members had died. Their average age was fifty, the average week-end tickets are now granted by the railways to all stations, so that commercial travelers on presentation of their certificates can purchase tickets to any point good to start Friday p.m. and return the following Monday at one first-class fare.

The total receipts for the year were $86,329.65, which with a balance of $10,217.09 last year made a total of $96,546,74. Total disbursements were $91,769,73, leaving a balance of $4,777.01 The year's operations resulted in a surplus revenue of $12,263.17, making the present surplus or capital of the

Mr. Fred. L. Cains,
President of the Dominion Commercial Travelers' Association.

association, $254,754.32. The report was adopted.

The report of the election scrutineers, Messrs. Riddle and Stead, was as follows: For president, Mr. Fred L. Cains had received 2,191 votes; Mr. W. J Egan, 1,053. Vice-president, Mr. E. D. Marceau, and treasurer, Mr. R. C. Wilkins had already been elected by acclamation. The new board of directors, with the number of ballots each received, is as follows: James Thompson, 2,333; W. J. Cleghorn, 2,226; E. S. Bois, 1,875; J. B. Giles, 1,684; A. Terroux, 1,610..

The Banquet.

The annual banquet was held at the Windsor Hotel, Montreal, on Thursday evening, December 21. The event is one to which every traveler looks forward with pleasurable anticipation and it is only distance from the festivities and the fact of the event being always held near Christmas that prevents the majority of members from attending. As it was, there were exactly 260 members and guests seated around the well laden and flower-decked tables in the beautiful banqueting hall of the Windsor. Travelers gathered around any festive board are noted for having the proverbial "best time" and Thursday's banquet was no exception to the rule.

Mr. E. D. Marceau,
Vice-President of the Dominion Commercial Travelers' Association.

Mr. Fred L. Cains, the newly elected president, occupied the chair. With him were the principal guests and speakers of the evening, Hon. Sydney Fisher, Minister of Agriculture, and Hon. H. R. Emmerson, Minister of Railways; Mr. R. L. Borden, M.P., the Conservative leader for the Dominion, and Mr. F. D. Monk, M.P.

The menu was in the Windsor's best and this statement suffices to say that with the excellent table service no protests or cancelled orders were noted.

After the dinner had been served President Cains read a telegram from the Commercial Travelers' Association at Halifax, expressing their best wishes for Canada's prosperity and wishing a happy New Year to the Montreal members. He also read letters of regret owing to their inability to attend from the Governor-General, Earl Grey; Sir Wilfrid Laurier, Hons. W. S. Fielding, C. Fitzpatrick and W. Paterson; Messrs. Hays, Shaughnessy, Morse, His Worship Mayor Laporte and Hon. J. D. Rolland.

He also made a few remarks to the effect that their financial showing for the year was very good; they had added over $12,000 to their capital. In connection with the hospital funds of the association he said one of the members of the association had promised to give $1,000, if the other members would subscribe $2,000. This would enable them to provide a cot in the Notre Dame and General Hospitals for the benefit of commercial travelers, and he hoped the necessary funds would be forthcoming. The gathering arose while the chairman read off the names of forty-nine members who had died during the year.

Mr. R. C. Wilkins,
Treasurer of the Dominion Commercial Travelers' Association.

The Toasts.

Mr. Cains in concluding called upon the vice-president, Mr. E. D. Marceau, to propose the first toast, that of "The Government of Canada," coupled with the names of Hon. Sydney Fisher, Minister of Agriculture, and Hon. H. R. Emerson, Minister of Railways

After Mr. Munday sang "Le Canada," the toast of "The Parliament of Canada" was proposed by Mr. R. C. Wilkins, treasurer, who coupled the names of Messrs. R. L. Borden, leader of the Opposition, and Mr. F. D. Monk.

Mr. J. S. N. Dougall, the retiring president, then proposed the toast of "Trade and Commerce," to which Mr. C. C. Ballantyne, president of the Canadian Manufacturers' Association, and Mr. C. H. Catelli, vice-president Chambre de Commerce, replied.

Mr. Ballantyne in replying laid great stress upon the value of the commercial traveler as a factor in the development of the country's business. In speaking of the opportunities for advancement of men of the road he stated that it is largely from the ranks of travelers that modern up-to-date business houses draw their heads of departments. "There is no one so able to judge the requirements of the country trade and the people generally as the commercial traveler, so able to judge character, and so well posted on the financial affairs and stand-

ing of merchants." Mr. Ballantyne spoke also of the great development of the manufacturing interests of the country and attributed a good deal of the success of same to the work of commercial men. "If it had not been for the push, intelligence and energy of the travelers it would not have been possible to form the great association of which I have the honor to be president, the Canadian Manufacturers' Association." He referred also to the great future before the country in the greater development of its manufacturing interests.

Mr. C. H. Catelli replied briefly on behalf of the Chambre de Commerce, regretting the absence through indisposition of the president, Mr. H. A. A. Brault.

After a few topical songs and ballads by the St. Louis Quartette, Mr. W. J. Eagan proposed the toast of "The Press" in his usual good style. Mr. Hatley Taylor, of the Herald, responded.

C. C. Ballantyne,
President of the Canadian Manufacturers' Association.

Mr. Bois, of Quebec, proposed the toast of "The Ladies," to which Mr. Qua replied.

The gathering then sang the national anthem and dispersed.

Among those present were:

At the head table:— Chairman Cains, Hon. Sydney Fisher, David Watson, Hon. H. R. Emmerson, J. S. N. Dougall, James Robinson, W. H. Olive, George Bishop, W. J. Eagan, R. L. Borden, Wm. Murdock, F. D. Monk, R. C. Wilkins, C. C. Ballantyne, Fred Birks, George A. Mann, L. O. Demers, Jos. W. Rousseau, J. R. Day, A. Labelle, V. Laperle, Alf. Lortie, A. H. Casavant, D. Moreau, Arthur Chabot, J. A. Quick and *Ready* Sales

THERE'S pleasure and profit combined in a Sherwin-Williams Agency. Pleasure in showing and selling paints and varnishes that give such universal satisfaction for their quality and price. Profit in the liberal proposition we give our agents and the ready demand, seasons 'round, for our goods.

We are always back of our agents. The advertising helps we give are unexcelled. They create new business for every line of trade the dealer carries. They keep his old friends and win new ones for him.

The spring paint campaign is even now going forward rapidly. Our business getters are the best we have ever planned. If you are not one of our agents, we shall be pleased to explain to you what it means to be with us—the advantages of handling The Sherwin-Williams Paints.

Write our nearest office for full information.

Samples.

Mr. E. D. Marceau as an after dinner speaker left nothing to be desired. His proposal of the first toast of the evening was a finished piece of well pointed suggestions to the powers.

Mr. W. J. Eagan has a love for the press and his very kind and appreciative words were well chosen and delivered with dignity and emphasis.

No one has more friends than J. W. Rosseau. He has the physique, the geniality and the "savoir faire" of the genuine traveler. Besides, he's a hustler.

Mr. Monk is popular with the French-Canadian travelers. How they did call for him to "parlez en Francais" — and how he did "parlez" ! It's all the same to Mr. Monk—eloquent in both languages.

The Rolland Paper Co.'s little booklet and card of pens was a happy souvenir, as was the usual supply of cigarettes donated by the American Tobacco Co., Limited.

The St. Louis Quartette are a well balanced lot of artists—but why under heaven do quartettes, as well as soloists, always select ponderous and wearying songs for festive occasions ? Why, oh why ?

A splendid hit was made by Mr. R. C. Wilkins in asking the Ministers present to consider ways and means by which the 16,000 travelers (50 per cent. of whom were always away at election time) could exercise their franchise. It was observed by one of the members that the subject was worthy of consideration. Will it be thought of again ?

CANADIAN RUBBER CO. CHANGES.

A syndicate of Montreal and Toronto capitalists, headed by Major G. W. Stephens, M.P.P., and D. Lorne McGibbon, have succeeded in a big financial coup and have secured the controlling interest in the Canadian Rubber Co., by extending the purchase of about the capital of which is $1,500,000. The control of the company has been in the Allan family, and Sir Montagu Allan has been president for some years past.

The new syndicate has been buying up the stock of the company wherever they could get it, starting on October 11 last buying some stock at 75, and completing their work of getting control by securing several blocks of stock at 140.

Major Stephens in making the announcement of the coup, stated that plans would at once be made to greatly extend the business of the company by the addition of several plants. The company is the largest rubber company in Canada and had been held by old estates for over fifty years.

Mr. D. Lorne McGibbon, in referring to the growth of the company within the past few years, stated that they had almost doubled their output in thirty-six months, and in that interval nearly half a million dollars worth of profits had gone into betterments, such as new machinery and generally improved plant.

The present output of the works is over three million dollars' worth of goods per year, and the hands employed number two thousand. The company has branch establishments at Toronto, Halifax, Winnipeg and Vancouver, where stocks are kept and the trade supplied. They do, besides, a large export business.

Last year the company paid a 5 per cent. dividend and previous to that 8 per cent. The difference of the dividend is accounted for by the fact that a large sum was put into betterments.

The present officers of the company are Sir H. Montagu Allan, president; Mr. J. B. Learmont, vice-president; directors, Messrs. C. F. Smith, Andrew Allan, H. Markland Molson, Lt.-Col. Henshaw, Alfred Piddington, Hugh A. Allan and Lt.-Col. Hector Prevost.

A VALUABLE TESTIMONIAL.

THE following letter received by Mr. F. C. T. O'Hara, superintendent of commercial agencies, from a well known Ottawa firm, is a splendid testimonial to the effective system adopted in that branch of the Department of Trade and Commerce :

"We have on many occasions throughout the past year or so, applied for addresses to your department, of firms which appear by number in your weekly trade inquiries, and we have specially observed with what promptness our inquiries have been answered and how valuable the information given has been. We now think it only fair that we should acknowledge how much benefit the trade inquiries have been to us and to compliment you on the system you have adopted. We may add for your information that through the department we have succeeded in obtaining several agencies that have resulted in a handsome commission to us, as well as bringing a considerable revenue into the country in the way of duty."

Safety razors in cases are excellent sellers, according to the jobbers. They are put up very neatly and not only attract the trade of the man who uses them but make excellent Christmas presents. A number of new designs have been put on the market within the past year.

PAINT, OIL AND BRUSH TRADES

THE NORTHWEST OIL FIELDS.

A year ago a report was received from the northern portion of Athabasca to the effect that a rich oil deposit had been located there. Alfred von Hammerstein was the discoverer and he at once interested American and Canadian capitalists. Early last Spring heavy consignments of machinery were freighted down the Athabasca River to the new fields and since then boring has been faithfully carried out, but with what success those interested refuse to say. Trappers and hunters who have passed by the locality where the work is in operation state that the creeks and lakes in the vicinity are covered with an oily substance and oil is lying in surface seepages. Samples brought down show the oil to be of rich quality.

In Alberta, on the border of Montana, several large wells have been struck and one of them is reported to flow at the rate of 300,000 gallons per day, but this well has been plugged to wait better transportation facilities. A thriving town has sprung up at the wells, which is known as Oil City, and already the population of the little oil centre is nearing the three thousand mark. Companies have been formed and have received Government grants of land and several of them have already paid dividends on stock which a few months ago was considered as worthless.

At the present time several railroad companies are having surveys made to the new fields and it is their intention to build to the oil districts in the Spring. Geologists and oil experts claim that there is an immense underground lake connecting the wells struck in Alberta and Athabasca, although they are over 1,000 miles apart. It is claimed that when the fields have been properly developed they will prove to be as rich as any on the continent.

THE TIME TO PLAN.

After the holidays there are a few short weeks of comparative quiet in nearly every store, says an exchange. This is a good opportunity for the business world to look back upon its successes or failures of the past, sift out the reasons for each and map out new and better plans for the future.

The retail merchant in particular should take advantage of this opportunity. There are many little details in every store which can be improved with the exercise of a little thought and originality on the part of the proprietor and his clerks.

Changes in the arrangement of your stock always attract attention. It is always a good plan to look back carefully over the Spring business of the previous year and bear in mind the line of goods on which the greatest percentage of profit was made. If the same conditions are likely to prevail this year, see that this line is brought to the front early and arranged in some attractive and conspicuous way.

Get into the lower drawers, the bottom bins, the back shelves and the dark corners—up stairs, down stairs and in the cellar. Sort out the odds and ends which always accumulate in the handling of every class of goods, and make careful memoranda of them to work them off by some special effort when the proper season comes.

Your paint department should receive the same attention that is given to any other item of your stock. Some packages may become shop worn and these should not be carried over from year to year, but should be brought to the front for the busy painting season and sold out before the new stock is drawn upon. A little forethought and effort, with possibly a slight concession in price when the packages may have become materially damaged, will turn what might have been waste into ready capital.

The progressive paint dealer uses plenty of paint to brighten the appearance of his own store, which should indicate, both outside and inside, that he believes in paint and has confidence himself in the qualities of the goods which he sells.

Winter is a good time for interior changes, and it frequently may happen that shop worn material can be used with good effect in this way.

In searching out the dark corners of your store you may find some forgotten package of color cards or advertising matter which should be carefully noted and kept ready to hand when you need it. Have some convenient place where it can be preserved to the best advantage and kept clean.

Put in your stock order for paint and paint advertising at an early date and be sure to add some new lines to your stock each season.

Paints applied in the Fall dry about as quickly as in the Summer, yet the complete oxidation of the upper portion of the film is not hastened as it is in the hotter days of the Summer. Therefore the original elasticity is maintained longer, and the coating is much more durable. The clear, dry weather and the absence of sudden showers in the Fall season provide conditions most favorable for the proper application and drying of paints.

We Wish You a Prosperous New Year

but let us remind you that in your Paint and Varnish Department you can at least insure prosperity by stocking the Imperial Lines for 1906. Our new Catalogue will be mailed in a few days. If you do not receive a copy, drop us a card.

HENDERSON & POTTS CO., LIMITED

MONTREAL and WINNIPEG

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Dec. 29, 1905.

A FEW travelers are back on the road, but the campaign proper begins next week. The manufacturers in Montreal are enthusiastic over the prospects for 1906, declaring that there is nothing to stop them from breaking even the fine record of 1905.

Red lead has advanced this week, and some of the local jobbers have almost cleaned out their stocks. As the primary market keeps on advancing, and red lead has been going up steadily in the European markets, it looks as if Canadian jobbers would soon have to revise their figures very materially.

Linseed Oil—Prices are steady. Raw, one to four barrels, 47c.; five to nine barrels, 46c.; boiled, one to four barrels, 50c.; five to nine barrels, 49c., f.o.b. Montreal, net 30 days.

Turpentine—No further fluctuations have occurred this week. We quote: Single barrel, 93c. per gallon. Two barrels or over, 92c. For smaller quantities than barrel, 5c. extra per gallon is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Ground White Lead—Our quotations are as follows: Best brand Government standards, $5.75 to $5.80; No. 1, $5.40 to $5.55; No. 2, $5.05 to $5.30; No. 3, $4.80 to $5.05; all f.o.b. Montreal.

Dry White Lead—Prices are: Barrels, $5.40; 100 lb. packages, $5.65; 6 to 10 lb. tins, $6.65.

Dry White Zinc—We quote as follows: Pure dry in casks, 7 1-2c.; in 100 lb. kegs, 8c.; No. 1 zinc in casks, 6 1-2c.; in 100 lb. kegs, 7c.

White Zinc (ground in oil)—We quote: 25-lb. irons, 8c. to 10 1-2c.; No. 1, 6 3-4c.; No. 2, 5 3-4c.

Putty—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—The local market remains steady, with prices unchanged, in spite of advances to importers. We are quoting as follows: Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—An advance has been declared, owing to stocks giving out. We quote: Genuine red lead in casks, $4.75; in 100-lb. kegs, $5.00; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.50; kegs, $4.75; and smaller quantities, $5.50.

Gum Shellac — We still quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

Paris Green (for 1906)— We quote as follows: Barrels, 600 lbs., 15 1-4c. for Canadian Government standard, to 15 3-4c. for Berger's English; kegs, 250 lbs., 15 1-2c. to 16c.; drums, 25 lbs., 16 1-2c. to 17c.; drums, 50 and 100 lbs., 16c. to 16 1-2c.; 1 lb. packets, 17c. to 17 1-2c.; 1 lb. tins, 18c. to 18 1-2c.; 1-2 lb. packages, 19c. to 20 1-2c. per pound. Terms, 2 per cent. off on Berger's English.

Shellac Varnish—We quote as follows: $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

Mixed Paints—Our prices are from $1.20 to $1.40 per gallon.

Castor Oil—We are still quoting: 7 1-2c. to 8 1-2c., according to lots.

Refined Petroleum—We still quote: American water white, 16 1-2c. and 17 1-2c.; Canadian prime white, 14 1-2c. and 15 1-2c.; 18 1-2c. and 19 1-2c. ex warehouse.

Window Glass—No new features have cropped up during the week. The market is at present very firm at the following prices: First break, 50 feet, $2.10; second break, $2.20; first break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24.00, and twelfth do., $28.50.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Dec. 29, 1905.

AN advance in red lead is about the only incident of importance in the markets of the past week. This line is now quoted 1-4c. higher and a further rise is considered possible, owing to increased quotations at the sources of supply.

Business has been dull during the week, and there are no other changes to report.

White Lead—Ex Toronto, pure white, $5.80; No. 1, $5.37 1-2; No. 2, $5.00; No. 3, $4.25; No. 4, $4.50 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 1-2 lb. packages; genuine dry white lead, in casks, $5.25.

Red Lead—Genuine in casks of 560

lbs., $5.00, ditto, in kegs of 100 lbs., $5.25; No. 1, in casks of 500 lbs., $4.75, ditto, in kegs of 100 lbs., $5.00.

White Zinc—Genuine V.. M., in casks, $6.50; in 25 lbs., $7.50; in 12 1-2 lbs., $8.00; Lehigh, in casks, $5.50; in 25 lbs., $6.00; in 12 1-2 lbs., $6.50.

Shingle Stain—In 5-gallon lots, 57 to 90c. per gallon.

Paris White—90c. to $1.00 per 100 lbs.

Whiting—60c. to 65c. per 100 lbs.; Gilders' whiting, 75c.

Paris Green (for 1906)—We quote as follows: Barrels, 600 lbs., 15 1-4c. for Canadian Government standard, to 15 3-4c. for Berger's English; kegs, 250 lbs., 15 12c. to 16c.; drums, 25 lbs., 16 1-2c. to 17c.; drums, 50 and 100 lbs., 16c. to 16 1-2c.; 1 lb. packets, 17c. to 17 1-2c.; 1 lb. tins, 18c. to 18 1-2c.; 1-2 lb. packages, 19c. to 20 1-2c. per pound. Terms, 2 per cent. off on Berger's English.

Shellac Varnish — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 49c. to 52c.; boiled, 52c. to 55c.; 5 to 9 barrels, raw, 48c. to 51c.; boiled, 51c. to 54c. Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine—Single barrel lots, 95c. f.o.b., point of shipment, net thirty days. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c., and 10-gallon packages 80c. will be charged.

Glues—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels, $1.65 to $1.75; pure linseed oil, $2.00 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2.00; 100-lb. kegs, 25c. extra.

Plaster Paris—New Brunswick, $2.00 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.00.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

Crude Petroleum—Prices continue unchanged. We quote: Canadian, $1.36; Pennsylvania, $1.61; Ohio, 94c.

Steel ceilings are rapidly taking the place of lath and plaster, not only for stores and public buildings but for dwelling houses. They certainly have advantages that cannot be gainsaid. They are fireproof, easily kept clean and do not furnish any dirt to fall upon the goods or the furniture. Every hardwareman should keep his eye open for a chance to put in a steel ceiling.

KING BUG: "WELL BOYS! I KNEW SOMETHING FEARFUL WAS BOUND TO HAPPEN WHEN I HEARD THE CANADA PAINT COMPANY WERE SHIPPING THEIR PARIS GREEN TO THESE PARTS."

. . . The . . .

Canada Paint Company's

PARIS GREEN Kills POTATO BUGS

MADE ONLY BY THE

MONTREAL and TORONTO

Experience has demonstrated that **PARIS GREEN** is the only safe and certain remedy to be employed to destroy the

POTATO BUG

and, at the same time, not injure the leaves and plants.

For many years the Pure Paris Green made by the **CANADA PAINT COMPANY** has been recognized as the genuine bug and fungi killing article. It is Government Standard, and the formula is endorsed and approved of by the Department of Agriculture at Ottawa.

STOVES AND TINWARE

HOW TO CARE FOR COMPLAINTS.

THE success of a stove merchant depends largely upon the way he takes care of stove complaints, says "Buck's Shot," a St. Louis paper. If he lets a complaint run along from day to day without giving it attention, the consumer will get disgusted at the treatment received at the hands of the merchant. She will get prejudiced against the stove and it will become a very difficult matter to ever satisfy the consumer, even though the stove is made to operate perfectly. When the merchant lets the complaint run along without giving it attention the consumer tells all the neighbors about having a stove, bought of Mr. Jones, that does not draw or bake, and the entire neighborhood becomes prejudiced against the stove. If, after the consumer is prejudiced, the merchant goes or sends a man to take care of the complaint, even though the stove is made to work perfectly the consumer will not be as well pleased with it during the entire lifetime of the stove as if it had had immediate attention, and the consumer will feel slighted at the hands of the merchant. This will injure the business of the merchant, and also injure the reputation of the manufacturer's stoves and ranges in that city or town. If a merchant is not educated to take care of these complaints, when he gets a complaint he is in deep water, and immediately calls upon the company for assistance. This causes the representative in that territory to have to call upon the merchant at quite an expense of time and money.

For the above reasons it is very important that the merchant make an earnest effort to educate himself, his salesmen, the stove black, men who set up the stoves, in fact everybody who has anything to do with selling or handling the stove. A man cannot be a thoroughly successful stove merchant or stove salesman until he understands how to take care of a stove complaint. He cannot take care of a stove complaint until he understands what causes a stove to operate. He must understand that a stove of itself has no draft, that without air there is no combustion, without combustion no heat, that the air that creates combustion is drawn into the fire box by the draft in the chimney, that the heat created by combustion does not work its own way around the oven but is forced around by the draft in the chimney. If it fails to get around the oven, and the top of the stove gets red hot, it is proof positive that the draft is at fault, and is not drawing the heat under the bottom oven plate. If the stove gets hot it is proof that the draft is only strong enough to force the heat to the end of the flue strip, or part way under the bottom oven plate. To successfully bake, the draft must be strong enough to completely flood the space under bottom oven plate with heat. If the draft is too strong it will cause the bottom of oven to get too hot. If the draft is very strong it will draw the heat out of the stove, and it will neither cook on top nor bake successfully. Very often the consumer will declare that the stove has a good draft, that the fire burns nicely, etc., when upon investigation you will find only enough draft to create imperfect combustion, that the coal is being smudged and turned into soot instead of heat. It takes fifteen pounds, or fifty-eight cubic feet, of air to burn one pound of soft coal perfectly. When you make a man understand this, it will make him realize the importance of draft. Thousands of tons of stove castings are burnt out every year, a great many stoves are unjustly condemned on account of poor drafts, set up by careless, incompetent men, and most of all, by neglect of merchants in taking care of complaints.

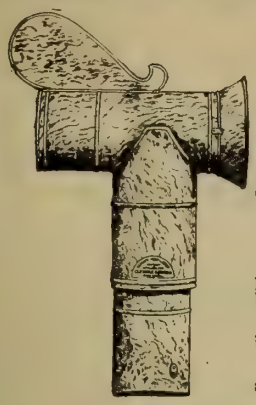
SHOWING A PARLOR STOVE.

TOO many stove dealers, says the Metal Worker, stop when they have polished the nickel, blackened the stove and put the mica in it and then set it in a conspicuous place. There are other things to be done which will not only please the customer and even the shopper, but will be sure to prove a good advertisement. A little more space, for example, should be given to the others. Again, instead of displaying it on the usual stove board, a neat rug may be used, with a grouping around the stove of a suitable coal hod, poker, slicer, dust brush, bellows and the other articles needed for attending a fire.

These fixtures are still not enough to display the stove properly. It makes an unsightly show for the doors to be open and the ash pan to be on the floor, so that the opening into the flues of a base heater is laid bare, and is equally unsightly if the upper mica doors are open in order to show how easy it is to take out the sectional fire pot, for the sections are not usually things of beauty, especially if they are also laid on the floor. The attention will be attracted far more satisfactorily if the dealer provides himself conveniently at hand a rack with hooks and shelves where these different parts can be hung or laid while the necessary parts of the stove are removed in the process of exhibiting the vitals of the stove and the ease with which they can be repaired. The more people know about anything the deeper is their interest. This is something which the average salesman does not know, and those salesmen who are above the average earn their advanced position by the store of information they have and freely give whenever a customer shows a disposition to look into anything they have to sell. If this rack and shelf arrangement can be made partly in the shop by the use of wrought iron pipe, it may cost more than to make it out of old packing boxes, but it will show the stove dealer is alive to the refinement of taste in his customers and is catering to it, which in itself often is all that is necessary to secure the preference over the other fellow when the purchaser is undecided which stove to buy. There is a good deal more in showing a stove to a customer than can be accomplished by merely setting it in a plate-glass window where every passer-by can see it.

AIR MOISTENERS FOR FURNACES.

There has long been a demand for a practical apparatus for supplying moisture to artificially heated buildings, and there has at last been invented a practical vaporing apparatus to accomplish this purpose. It is arranged to be placed in the centre of the bonnet or top of the hot air furnace. The portion of the vaporizer below the main dome lies within the air chamber at the top of the furnace so that the series of small circular openings in the vaporizer may permit the vapor to moisten the air as it passes by it. The vaporizer consists of a small boiler automatically supplied with the water required, the water supply being controlled by means of a valve operated by a lever attached to a piston connecting with a float in the water chamber. When the water level has reached a given point, the float rises and closes the valve. When a sufficient quantity of water has passed through the hot air chamber, the float lowers, opens the valve and the water enters the vaporizer through the supply pipe.



BURNS LIKE COAL.

The recent discovery that the so-called oilstone which underlies all the lead and zinc fields of Southwestern Wisconsin would burn like coal promises to revolutionize the mining industry in that section. Heretofore there have been no smelters in the field. At the Enterprise mine seven wheelbarrows of the stone kept the roaster going for 12 hours, developing a richer gas than is produced from coal, and of such volume that the pipe from the retort to the roaster was unable to convey it fast enough. When a ton of this rock was tested it produced 50 gallons of heavy lubricating, 4,000 cubic feet of gas and a residuum of several pounds of fire and weatherproof paint.—Exchange.

NEW SOLDERING MACHINE.

A clever invention in the form of a moving soldering machine has been completed by Mr. F. L. H. Sims, manager of the Siche Gas Company, Toronto. The new machine will be used by the Dominion Roller Screen Company. It runs back and forth on a metal track and distributes the solder over the brass screens, adhering them firmly to the rollers, enabling a boy to turn out hundreds an hour.

Business Getters for Tinsmiths

Are there any defective chimneys in your locality?

Then it is your chance to get business.

— THE —

ZEPHYR Ventilator

saves the expense of building a high chimney.

It is so constructed as to guarantee a perfect draft, and, therefore, easy combustion.

By using the ZEPHYR it is possible to burn soft coal with the best results.

The smoke is easily drawn off, enabling an even heat to be generated.

THE ZEPHYR IS STRONGLY PUT UP AND WILL RESIST ANY STORM

This is what others think of it:

Montreal, February 20th, 1901.

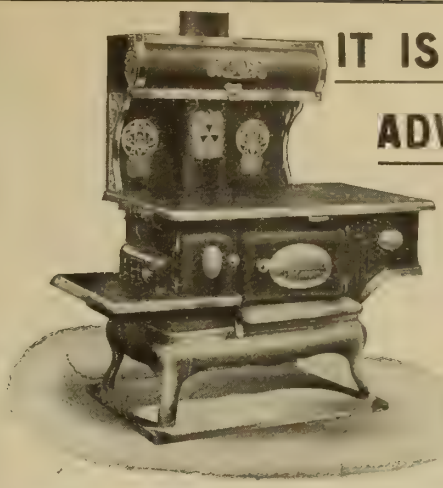
Providence Mother House

Messrs. HARRIS Co., Montreal.

Dear Sirs,

It is with pleasure that I can say that your "AEOLIAN" Ventilator is the best Ventilator we have used on our establishments so far. We had eight (8) of the large sizes put up on our Mother House and on the Hospice Gamelin and they gave us entire satisfaction.

Yours respectfully, SISTER MADELEINE, Dep.



We manufacture and guarantee:

The Harris Filter. The Zephyr Ventilator.
The Aeolian Ventilator. Expansion Conductor Pipe.

Steel Ranges

We have educated the people of Canada up to a high appreciation of high grade ranges. Let us take the

Guarantee Bond With Each Range

Oxford Chancellor Range

for instance. Your establishment is not complete if you haven't this A1 Steel Range on your floor. The body of this Range is built of the best quality steel sheets, to which is closely riveted an inter-lining of asbestos mill-board.

The oven is big enough to meet the requirements of a large family, and is fitted with our convenient drop oven door.

This range burns hard or soft coal or wood.

The Fire-box is accurately proportioned, and the celebrated Duplex Grates are provided for hard coal burning.

The Fire-box for wood is very commodious, and intended to burn the roughest kind of wood.

The Chancellor is furnished with special fire-box linings for soft coal burning, the hard coal linings or linings for wood burning, just as required.

The Reservoir is of planished copper and is easily attached or detached by any one in a few minutes.

These features, which we have merely enumerated to you, have been explained in detail to probable range buyers in your territory.

The Oxford Chancellor is thoroughly satisfactory, durable, an easy seller and a trade winner.

Let us mail you Catalogue 61

WE also manufacture Cast Iron Stoves and Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges, Hot Water and Steam Boilers and Radiators, Warm Air Furnaces and all kinds of cooking and heating apparatus, Plumbers' Supplies.

COAL ATTACHMENT FOR GAS STOVE.

A gas stove equipped with an attachment designed for the use of coal for cooking purposes is now announced. It consists of a large fire box for burning hard or soft coal or wood, to be attached at the side of the gas stove proper. It is particularly useful for burning waste paper and other refuse. It can be attached to an ordinary gas range.

TO ERECT A MODERN FACTORY BUILDING.

The Glazier Stove Company, Chelsea, Mich., is soon to erect a large three-storey modern factory building for the manufacture of gasoline stoves and steel ranges. There will also be a new building which will be designated the Welfare Department. This building will be given entirely to the employes and will contain reading rooms, swimming pools, shower baths and a gymnasium.

STOVE ITEMS.

The stove mounters at Burrow, Stewart and Milne's foundry at Hamilton went on strike recently because a non-union man was put to work.

With the present price of iron the mixture in most stove foundries is more expensive than that which was poured into the stoves in the early part of the year and all kinds of supplies and labor are equally strong in the market. When these considerations are carefully looked into there are many in the trade who feel that no better time to advance the prices will be found than now.

DRAFT EXCLUDER

The patents, or rights to manufacture a draft excluder are for sale for Canada and the United States. The Draft Excluder is an English invention and is regarded as the most effective appliance that has yet been produced. It can be fastened on any door in a few minutes. It is so constructed that when the door closes, wind, water and even air are prevented from passing between the foot of the door and the floor. It is strong and durable, but at the same time light and neat and does not in any way disfigure the door to which it may be attached.

The chief feature of its superiority over others is that when the door is closed the Excluder presses very firmly against the floor, yet the moment the door is opened even the smallest degree the pressure is released, so that the door may swing backwards and forwards as freely as if there were no appliance upon it.

It goes on upon the inside of the door.

COST OF PRODUCTION

The Excluder is constructed of mild sheet metal and rubber, and it costs in England about three shillings and three pence to produce each Excluder. The rubber may be replaced by wood and in that case the cost of production would be reduced to about two shillings and six pence. These calculations are based on cost of steel and rubber in England.

Address inquiries to

SOLICITOR, care of Hardware and Metal Toronto Office. (tf)

A WESTERN STOVE.

A stove worthy of a large sale in Ontario and the northwestern provinces is the National Oak Heater, manufactured by the Moffat Stove Company, of Weston, Winnipeg and Calgary. This stove is made particularly for the western trade and hardware dealers now handling American goods will do well to send to the Moffat Company for particulars regarding this heater, which burns either hard or soft coal, lignite, coke or wood and is smoke consuming.

The illustrations shown indicate two

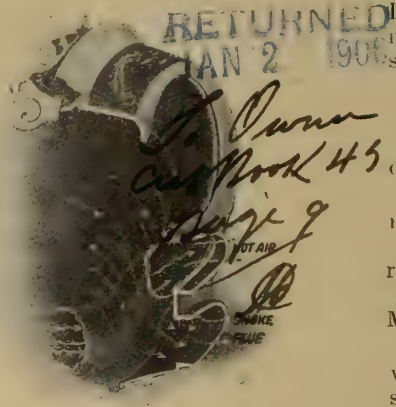

Fig. 1.

of the strong talking points of the National Oak. Figure 1 shows the double draft, the smoke and hot air going upward in different flues, the draft being taken from the floor under the stove and all the heat being extracted from the smoke before it is allowed to escape through the chimney. Under this double

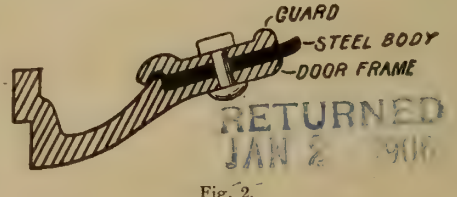

Fig. 2.

hot blast system air is taken through the screw draft, passed around the super-heating chamber, entering the fire-pot through slots, consuming all the gases and checking the fire where necessary. Figure 2 shows how the steel and iron rings are substantially joined. No soft coal stove should be without a gas ring over the fuel.

The Moffat Company have made remarkable progress, their business having grown from about $13,000 annually to over $200,000 during the past year. While they are carrying over a considerable quantity of stoves their business shows a satisfactory increase during the past season. They are specializing on fewer lines than formerly and their policy of getting into direct touch with their customers has proved successful.

Mention Hardware and Metal when sending for catalogues or for descriptive matter relating to the National Oak.

Business Changes

Ontario.

C. J. Werner, stoves and tinware, Dunnville, is advertising business for sale.

B. Gerry, hardware merchant, Wingham, has sold his business to Bishop & Brewer.

H. W. Denyes, hardware merchant, Carleton Place, has assigned to John Macpherson.

The stock of O'Connor & Wilson, hardware merchants, Ottawa, was sold at 50c. on the dollar.

The firm of Johnston & Smith, stoves, London, have dissolved, and the business will be carried on by Wm. Johnston.

Quebec.

Joseph Legault, blacksmith, Montreal, deceased.

C. Gauthier & Co., plumbers, Montreal, registered.

H. & W. Gamache, plumbers, Montreal, registered.

Hector MacKenzie, plumbers' supplies, Montreal, has lost by fire.

The assets of Guenette & Frere, hardware merchants, Montreal, are to be sold.

Chas. Alph. Parent has been registered with L. C. Giguere & Cie., hardware merchants, Quebec.

There will be a meeting of creditors of Galarneau & Ethier, plumbers, Montreal, on the 16th inst.

Western Canada.

The business of F. N. Pedlar, McLean, is advertised for sale.

Kribbs & Rendel, hardware merchants, Frank, Alta., have dissolved.

Wiebe & Epp, hardware merchants, Rosthern, have dissolved.

Johnson Bros., hardware and implements, Redvers, opening branch at Wauchope.

MacVicar & Davidson, agricultural implements, Heward, have been succeeded by F. Kneeshaw.

British Columbia.

Baker & Taylor, blacksmiths, Ladner, registered.

New Brunswick.

Siddal Bros., stoves and tinware, Sackville, have sold to W. H. Carter.

The cash register has done more to prevent stealing in stores than all of the sermons ever preached. Stealing dimes leads to greater thefts. Therefore who can say just how much the cash register has counted in the great plan for making men better. "Thou shalt not" often deters, but "you cannot" goes much farther.

CONDENSED OR "WANT" ADVERTISEMENTS.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

R. P. Inglis, Montreal, is making preparations to establish a street railway at Edmonton.

A hydraulic engineer is to investigate the subject of developing power at the Reversible Falls at St. John, N.B.

The convention of the Canadian Manufacturers' Association will be held next year in Winnipeg, September 17, 18 and 19.

It is announced that the Canadian Northern Railway line will be constructed into Prince Albert inside of a couple of months' time.

James A. Ross, Wellandport, is promoting a company to operate an electric railway from Port Maitland, on Lake Erie, to Beamsville, on Lake Erie.

An important pulp wood industry in which from $1,000,000 to $2,000,000 will be invested is to be established in the Back River district near St. Jerome, Que.

The Canadian Machine Telephone Co. has been granted a twenty-one year franchise by the city of Brantford. The price of the 'phones is to be $15 to $25.

The Canadian Tap & Die Company, who recently purchased the Clark & DeMill building at Galt, have received a consignment of thirteen machines, which are now being installed.

About one hundred men will move to Toronto from Stratford on account of the transfer of the factory of the Kemp Manure Spreading Machine Co. to Toronto by the Massey-Harris Co.

Winnipeg financiers will establish an industry at Medicine Hat to be known as the Great West Sewer & Tile Company, with a capitalization of $1,000,000. Brick and tile will be manufactured.

A company of English and American capitalists propose to construct a railroad from a harbor on the north shore of Lake Superior into the country north and beyond the height of land. They also propose to establish pulp wood mills in connection with the road.

The Lake Superior Company has recently made contracts with the Canadian Pacific Railway Company for 60,000 tons of steel rails, deliverable next year. The capacity of the Lake Superior Company for rolling steel rails is now fully taken up until about December 1, 1906.

The Dominion Iron and Steel Company has secured a second contract for rails from the G.T.R., aggregating 37,000 tons. Delivery on the new contract will begin the first of the year, when the I.C.R.'s 25,000-ton order will be completed. It is also said that the steel company has secured a large order for rails from the C.P.R.

The following officers have been elected by the Petrolea Board of Trade for 1906: President, R. S. Ford; vice-president, F. W. Wilson; secretary, T. S. Chatterton; treasurer, W. F. Cooper. Council—The officers and Mayor J. D. Noble, J. E. Armstrong, M.P., J. L. Englehart, Wm. English, Chas. Jenkins, Wm. Lowery, Jas. McCort, J. W. McCutcheon, Dr. C. O. Frirbank, John Kerr and G. G. Moncrieff.

Canada's total exports for the five months ending November 30 of the current fiscal year were greater by five millions than the total exports for the whole of the fiscal year 1895. The increase in domestic exports for the five months over the same period of last year was in round figures $18,000,000, and the gain in the aggregate trade for the five months was $26,000,000. These figures denote the remarkable expansion that has taken place in the trade of Canada in the last decade, and which, to quote a time-worn expression, is still going forward by leaps and bounds. Taking the several items in the exports it will be seen that during the five months agricultural products increased by ten millions, manufactured articles by one million, animals and their products by four millions and a half, and fisheries by about two millions. Exports of products of the mine and of the forest remained stationary. The gain in the importation of free goods is only about half a million, whereas dutiable goods show a betterment of about seven and a half millions. The imports of domestic produce last month increased by seven millions and the exports by nearly eleven millions.

Two important announcements were made by representatives of the Lake Superior Corporation before the Tariff Commission at its recent sitting at the "Soo." One was that a coke plant would be built to supply the coke for use in connection with the steel plant, and the other that the directors had authorized the construction of open-hearth blast furnaces for the manufacture of steel for rails and structural purposes. The open-hearth furnaces could use the ore from the Helen mine, which cannot be used in the company's Bessemer plant. The location of the coke plant depends upon the result of a request that the duty on soft coal used for coking purposes be removed. If it is removed the company will build its plant on the Canadian side of the river. Otherwise it will be located in the Michigan "Soo." The building of a coke plant would mean the employment of 300 men, and the expenditure in Canada of an additional $1,500 daily, which now goes to United States railways to pay the transportation charges on coke brought from the Pennsylvania and Virginia fields. The consumption of coke at the plant amounts to 500 tons each day. This is brought in all-rail, as it cannot be shipped in boats, and thus keeps 1,000 cars constantly in the service of the company. It has been found impracticable to get a supply of coke ahead, so that the steel industry at the "Soo" is at all times subject to railway delays, strikes, blockades, or anything else that may delay the delivery of coke over the long distances between the "Soo" and Virginia and Pennsylvania.

Companies Incorporated.

The J. C. & J. C. Mining Development & Smelting Company, of Illinois, has been licensed to do business in Ontario with W. Proudfoot, of Goderich, as attorney.

The Colonial Cordage Company, chartered by the Dominion Government, has been licensed to do business in the Province of Ontario, with W. B. Converse, of Toronto, as attorney.

The Pacific Construction Company, chartered by the Dominion Government, has been licensed to do business in the Province of Ontario, with C. J. R. Bethune, of Ottawa, as attorney.

Silver Bar Mining Co., Ottawa, share capital five hundred thousand, purpose to mine and mill minerals. The directors are W. D. Gregory, H. F. Gooderham, H. N. Barry, R. Weir and J. F. Boland.

Mac Mining Company, Toronto, share capital three hundred and fifty thousand, purpose to develop mining property. The directors are D. A. McPherson, Toronto, Geo. Chapman and W. E. Buckingham, of Guelph.

J. Eveleigh & Co., Montreal, share capital two hundred and seventy-five thousand, purpose to manufacture trunks, harness, saddlery, hardware, etc. The directors are J. Eveleigh, F. J. Eveleigh, W. E. Boon, E. E. Hutchison and J. W. Blair, all of Montreal.

The Dominion Steel Car Co., Montreal, share capital five hundred thousand, purpose to manufacture railroad rolling stock. The directors are E. F. Surveyor, A. C. Casgrain, C. M. Cotton, J. W. Weldon and S. J. Lehuray, all of Montreal.

St. Lawrence Pressed Brick & Terracotta Co., Montreal, share capital two hundred and ninety-nine thousand, purpose to manufacture brick, etc. The directors are A. W. Blouin, O. Frechette and A. Brunelle, all of Montreal, and R. Lefebvre and F. C. Larose, of LaPrairie, Que.

Meakins Brush Co., Montreal, share capital sixty thousand dollars, purpose to take over the business of Meakins, Sons & Co., manufacturers of brushes, etc. The directors are C. W. Meakins and W. G. Meakins, Hamilton, Ont.; F. A. Ritchie, Toronto; C. W. Meakins, H. R. St. Michael, J. J. Robson and M. Thivierge, all of Montreal.

McCormack Cobalt-Silver Mining Company of Toronto, share capital five hundred thousand, purpose to develop mining property. The directors are R. L. McCormack, R. E. Gibson, John A. McGillivray, F. E. Hodgins, and S. R. Wickett, all of Toronto, H. Bascom and S. S. Sharpe, Uxbridge, and Archie Campbell, of Toronto Junction.

GERMANY'S CEMENT BUSINESS.

Germany, which 15 years ago led the world in its cement manufacture, occupies at the present time a similar preeminent position in cement wares. With the exception of the concrete building blocks America is far behind Europe in the utilization of cement products, omitting, of course, concrete structural work.

According to Cement and Engineering News, there are in Germany 100 factories producing woven wire for reinforcing cement pipe, and round and egg-shaped

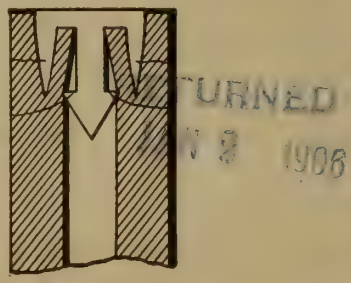
sewer sections. The clay roofing tile industry has now a competitor in the cement tiles, while building stone is being rapidly displaced by cement substitutes made up into caps, sills, steps, bridge materials, carriage blocks, hitching-posts, newel posts, balusters, water-troughs, relief ornaments and numerous other similar products.



NEVERSLIP ANCHOR WEDGE.

A VALUABLE improvement in wedges for hammers, axes and other tools is the "Neverslip Anchor Wedge" shown in the accompanying illustrations and manufactured by the Neverslip Anchor Wedge Company,

The Neverslip Anchor Wedge.

Auburn, N.Y. The sectional view shown illustrates the operation of the Neverslip, and the reader will notice that when the wedge is driven into the handle, the wood is forced up over the shoulders of

How the Wedge Grips the Handle.

the shank, securely anchoring the handle to the hammer, axe or other handled tool. It not only insures a permanent anchorage of the handle, but it preserves the life of the handle itself. The sale of tools, the heads of which are practically immovable, means satisfied customers, and interested merchants are invited to send for further information, mentioning Hardware and Metal in their communication.

MR. SCHWAB'S ENTERPRISE.

The Bethlehem Steel Corporation, which is expending in the neighborhood of $10,000,000 in additions and improvements, will engage in the manufacture of structural steel under an entirely new process. Beams and other classes of steel under this head will be of solid steel, free from rivets. Under the old process the free use of rivets on columns of certain sizes is necessary.

The manufacture of structural steel under the process secured by the Bethlehem Steel Corporation has never before been attempted in America. A small plant is in operation in Germany. The new material to be produced by the Bethlehem Steel Corporation, it is said, will be stronger and more durable than that now produced, and cost of production will be lower. The new additions to the Bethlehem Steel Corporation, including blast furnaces with a total capacity of 2,000 tons a day, have already been started. According to Mr. Schwab they will not be completed for a year and a half.

BUILDING NOTES.

J. A. M. Aikins, is to erect a six-storey business block at Winnipeg.

Crediton is to have a four roomed school building built next Summer.

The City and District Savings Bank is to have a new bank building in Montreal.

The Canadian Machine Telephone Co. are to erect a central building at Brantford.

J. W. Walker, Toronto, has taken out a permit to build four residences to cost $14,000.

The Hudson Bay Co., Winnipeg, are to remodel and enlarge their store building in that city.

The Royal Bank will build a new structure of granite or marble next Summer in Montreal.

The National Drug & Chemical Co., Montreal, is to erect a factory in that city, to cost $250,000.

The Toronto Laundry Machine Co. are to erect a factory building on Dundas street to cost $12,000.

E. L. McColl has taken out a permit to erect a galvanized iron warehouse in Toronto to cost $6,000.

Raymond & Sons have commenced work on the construction of a new business block at Victoria, B.C.

M. Shea, Buffalo, has purchased a site in Toronto and will erect a new theatre to cost from $150,000 to $200,000.

A. H. Pulford, Winnipeg, has purchased a site and will erect a new auction warehouse and office building.

It is stated that the C. R. Somerville Co., of London have definitely decided to build a paper box factory at Stratford next Spring.

A stone school to cost $60,000 is to be erected at Calgary. W. B. McLaughlin, of Wetaskiwin, has the contract. This figure does not include the heating work.

At a cost of $46,000, a new four-storey brick and stone business block is to be erected in Vancouver for Mr. W. F. Ackland Hood, an English capitalist.

The contract for the construction of the abattoir to be built by P. Burns & Co., in Vancouver, will be awarded to Messrs. Armstrong & Morrison, of Vancouver.

THERE IS NO FEATURE

In the sale of an article that inspires the dealer to recommend, and induces the customer to buy, equal to the merit of the article itself. As one knows a true friend from long acquaintance and association, so it is that stock in trade that has stood the test of time is recognized as something safe to invest in.

CHURCH'S

ALABASTINE

Is a **PERMANENT** and **SANITARY WALL-COATING**, that **hardens with age.** Has been on the Canadian market and made in Canada for more than twenty years. Is extensively sold and persistently advertised. Sells without effort and affords a good margin of profit. The country is full of cheap kalsomines, foreign made; but what does it profit a dealer to sell them and lose his reputation for dealing in only first-class articles?

ALABASTINE is **NOT A KALSOMINE.** We make **JELLSTONE, which is a Kalsomine,** and in point of merit as such has no competitor. If you **must have a temporary coating,** stock **JELLSTONE** which is Canadian-made goods. **ALABASTINE** satisfies the customer, and a satisfied customer is a splendid advertiser. **PUSH ALABASTINE.**

Look up your **ALABASTINE** stock. Do it this fall. Order now, from jobber or manufacturer. Spring dating.

THE ALABASTINE CO., Limited, - - Paris, Ont.

Choosing Cylinder Locks

1. An Eye to Workmanship

It is very important that the men who make cylinder locks be skilled in their work. If they are not skilled, the locks they make will lack thoroughness, and without thoroughness locks are valueless.

Gurney Cylinder Locks

are made by men of pronounced ability. These men are instructed to make perfect locks. The proof of their success is in the locks themselves and the commendations of builders concerning the locks.

Gurney Cylinder Lock workmanship is not a superficial thing as is the case with many cylinder locks. It is deep down, right-to-the-core skill. **Gurney Cylinder Locks** have reached the summit of the industry for that reason.

When you have copies of **Catalogue No. 7** and **Supplements,** you see plainly why **Gurney Cylinder Locks** lead.

Will you write for them?

PLUMBING AND STEAMFITTING

PLAIN TALKS ON PLUMBING, HEATING AND VENTILATION

A Series of Practical Articles Written in Plain Terms, Devoid of Technical Phrases, Algebraical Signs, etc., so as to be Easily Understood by all Interested in these Subjects.

By M. J. Quinn, Mechanical Superintendent for the Ontario Government.
[Registered in accordance with the Copyright Act]

ARTICLE XXIII.

HINTS ON PLUMBING.

IN this article it is the purpose to deal with the two points in a plumbing plant, which, outside the actual syphoning of the fixture traps, are more likely to permit the escape of sewer gas into a building, unsuspected, than perhaps any other feature.

In our article on "Testing a Plumbing System," we drew attention to the fact that while the piping system, which includes all soil, waste, and break-syphon connections, could be tested under pressure, that it was impossible to put a pressure above a couple of ounces on the final joints between the fixtures and the said connections, and for that reason great care should be exercised in making the latter.

In this connection the joint between the closet and the soil pipe is undoubtedly the one which is most likely to leak—if the case may be put in that way—and which therefore requires the most care in the making.

In fig. 1 we have a drawing, in section, showing the various parts which go to make this final connection and which are prepared and arranged as follows:

"A" is the 4 in. lead bend which is "wiped" on to a 4 in. brass ferrule (not shown), the ferrule being caulked into the soil pipe as described in a previous article; and the upper end of it is brought up through the floor at least one half inch.

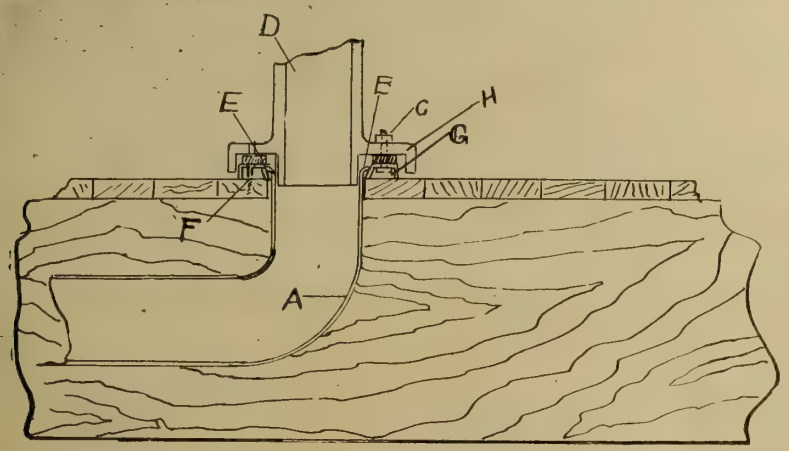

Fig 1.

"G" is a brass ring, called a floor flange, the internal circumference of which tapers inward at the bottom toward the lead bend as shown, and is filed clean and thoroughly tinned before being set in place.

In the brass floor flange will be found a number of holes, two (and sometimes four) of which are for bolts "C" to pass through for the purpose of fastening the closet down later on, and four other holes are for the purpose of screwing the flange to the floor with screws "F."

The method of making the connection is first to cut off the top of bend "A" at a point 1-8 inch below the top of the flange "G" and clean (by scraping) the outside of that portion of the bend above the floor, then, having tinned the inside edge of the brass flange as before directed, lay it on a flat surface to see if the top is level, and, if not, then make it so with a hammer. Now insert the two bolts "C" from underneath the flange and place the latter over the lead bend, set bolts in proper position to pass through holes for same in bottom of closet, and screw the flange to the floor with screws "F."

This being done gently beat the top of the lead bend over against the sides of the flange as at "B" and solder securely all around, using a pretty hot iron, and making the solder flow freely.

This joint having been made, next examine the underside of the flange "H" in the bottom of the closet to see that there are no lumps or other imperfections which would prevent it coming to a good seat on the rubber washer "E" when bolted down.

Great care must be taken when fastening down nuts "C" that the pressure is equal on each side of the closet, because unequal pressure in this regard will probably result in breaking the flange on the bowl.

Another point in the plumbing system requiring special attention is the connections made for draining the basement floor, and while, owing to the space of time often elapsing before any water is present to drain away, it is difficult to provide a connection which under all circumstances will be safe, still, in a good many instances, fixtures are used which needlessly expose the occupant of the building to the dangers of sewer gas poisoning, and most prominent among the latter class is the "Bell" trap, illustrated in fig. 2.

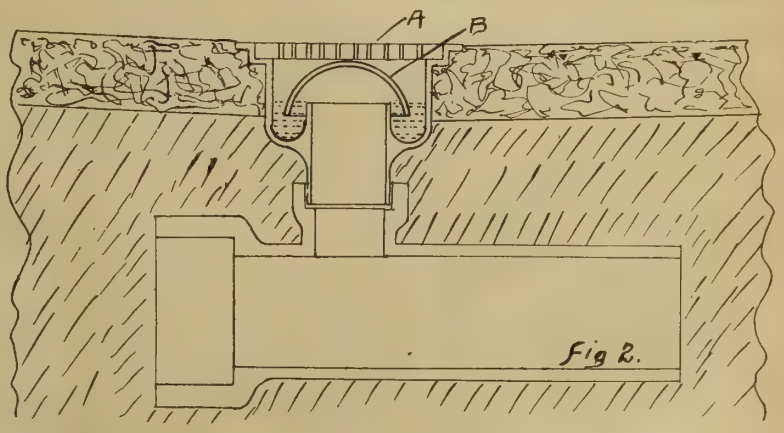

Fig 2.

The "Bell" trap, as will be seen, is a casting having within it a space all around the pipe which enters the drain which is supposed to hold water. Above

the water and level with the floor is a grating "A," and fastened to the center of this grating is the "Bell" "B," the mouth of which is submerged, so that water entering the sewer must go down on the outside of the "Bell" and up on the inside.

The difficulty with the "Bell" trap, however, is that the space in which the water is contained is very small and fills up rapidly with dust and floor sweepings, so that any small amount of water not absorbed in that way is rapidly evaporated, making the fixture a most dangerous one.

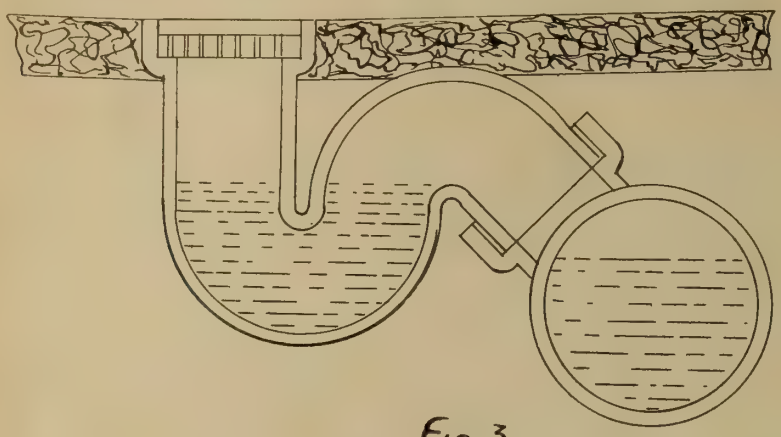

Fig 3

Where it is absolutely necessary to have floor drain for the basement, then the proper connection is one such as is shown in fig. 3, the advantages of which are that it holds a comparatively large amount of water, which is not so easily evaporated as that in fig. 2, because it is further from the surface, and it is not so easily choked up.

It is, however, a decided advantage to have a wash basin or water filter empty into it, as this prevents the possibility of the seal becoming broken for want of fresh water to make up that lost through evaporation.

In the case of cellars where drains are necessary only during the wet season, or simply to take away the water when the floor is washed over with the hose, then it is advisable to use "clean out" in the top of the trap, removing the cover only when necessary.

Fig. "A" shows a connection to the drain for draining the cellar floor, which should not be used, for the reason that, as will be plain, when the water rises in the drain to "A" or even to a much lower depth it will flow back into the trap.

This, of course, would be no disadvantage if nothing but clean water were passing through the drain, but in the case of ordinary domestic sewage, the trap would soon become fouled, and a menace to the health of the occupants of the building.

BATHROOM FIXTURES.

A new line of manufacture recently taken up by the Carriage Mountings Co., 491 King street west, Toronto, is that of nickel plated bathroom fixtures, including towel bars, soap and sponge dishes and baskets, tumbler, tooth and soap holders, comb and brush trays, toilet paper fixtures, robe hooks, shower-errings, bath sprays, and whisk and match holders. All of these lines are illustrated in a small but neat catalogue issued by the company, a copy of which can be had by any inquirer who mentions Hardware and Metal. Being made of nickeled brass, these goods cannot rust, and plumbers and hardware merchants will find them a good line to carry in stock.

SMEAD SYSTEM UNDER FIRE.

The annual report of Chief Plumbing Inspector Reuben S. Benner, of Providence, R.I., makes a strong plea for the replacement of the Smead dry closet system by water carriage sewerage in the schoolhouses of Providence, which are still equipped with the antiquated system. After speaking at some length of the danger to the health of teachers and pupils of a possible reversal of currents in the ventilating ducts of the Smead system, he says:

"The workings of this objectionable system having been explained in previous reports, it is not necessary to review in detail the bad features of the combination of dry closets and heating and ventilating apparatus; it is enough to say that the slightest negligence on the part of janitors or the opening of a window by a teacher may cause back draught and carry the air from the vaults into the rooms instead of drawing the air from the rooms through ducts to the vaults and discharging it into the open air. Years ago where there were no sewers, this arrangement seemed to be the most available substitute for drainage, and it was adopted in many towns and cities, Providence being among the number. But, after thorough trial, it was found lacking in the essential feature of cleanliness, and to-day no recognized authority on sanitation advocates its retention in old or its adoption in new buildings.

"Lack of drainage facilities cannot be urged as a reason for deferring action on one of the most important questions which can be presented to the representatives of the parents of the children who are exposed to the dangers of ventilating ducts leading directly to the dry vaults. There can be no difference of opinion as to the superiority of high class plumbing over all other methods of removing sewage, and whoever compares the dry vaults and the new hygienic plumbing placed last Summer in the three schoolhouses on Branch avenue, Bourn street and Roosevelt street, will commend the action of the committee on city property and advise the abolition of the remaining vaults at the earliest moment practicable.

"In the report of this department for 1903 was an estimate of the cost of approved closets and urinals connected with the city's sewers and of the cost of the coal used in operating the stack heaters employed in maintaining circulation of air between the schoolrooms and the dry vaults. The amount required according to the estimates was $17,600 for the fourteen buildings. Deducting from this estimate the $4,600 specified for the Roosevelt street, the Branch avenue and the Bourn street schools, we find that $13,000 will be required for the remaining eleven buildings. At $5 a ton, the cost of the 171 tons of coal burned in the stacks of the fourteen schools was $855, or $225 less than 3½ per cent. interest on the cost of plumbing. Last year's table showed that forty-five tons of coal were burned in the stack heaters of the Roosevelt street, the Branch avenue and the Bourn street schools. Subtracting $225 from $855, we have a fuel expenditure of $630, or more than the interest on an investment of $13,000 in sanitary plumbing, and, as present prices of coal are much in excess of $5 a ton, it is obvious that the change can be effected without cost to the taxpayers.

"The estimates quoted were on the deep immersion school latrines, which

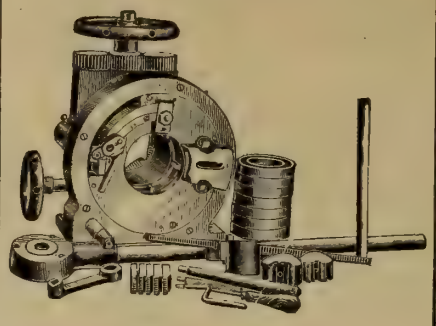
give excellent results, but which are not as desirable as the improved water flush closets offered since the publication of the 1903 report of this department. The later type may be described as a series of closets having an automatic flushing tank similar to that of the latrine with the added improvement of presenting above the floor line the appearance of the individual closet. The estimated cost of the new individual closet is 20 per cent. higher than that of the latrine or $15,600 for the eleven schools in which unsavory dry vaults are in daily use. The interest on this amount at 3½ per cent. is $546, or $84 less than the cost of the coal burned in the stack heaters on a basis of $5 per ton."

The best type of plumbing thus will cost the city nothing.

MECHANICAL VENTILATION AND HEATING.

When the necessity of mechanical means for the ventilation of buildings and the convenience of steam hot blast apparatus for the combined heating and ventilating of all classes of buildings was fully realized in the early eighties, a radical change was made from the old and proportionately expensive tubular heater to a single large, hollow cast-iron chamber, into which a group of steel pipes was screwed, and through which steam could be circulated. Enclosed in a steel plate covering, which connected with the inlet of a fan, air in large volumes was drawn across these pipes and heated to a temperature dependent upon its quantity and the steam pressure.

But such a type of heater was obviously serviceable only for small plants. For large work a new form of heater section was designed, consisting of a long, narrow, hollow base casting, divided by an interior diaphragm midway of its length into which steel pipes were screwed. Cross-connecting pipes above gave ample opportunity for the steam, entering at one end of the section, to pass up, over and down to the other side, whence it could escape in the form of water or condensation through a chamber in the lower part of the casting.



Made up in groups, supplied through a single steam pipe, and enclosed in a fireproof steel plate jacket, this new design has continued to this day as the most convenient, durable and compact upon the market. In its combination with a steel plate steam fan, this forms the hot blast apparatus as manufactured by the B. F. Sturtevant Co., Boston, Mass.

HAMILTON CONSPIRACY TRIALS.

The preliminary hearing of the plumbers' conspiracy cases at Hamilton was continued on Tuesday. Only two witnesses were examined, the secretary of Local Union 67, and George Stevenson, a former member of the Master Plumbers' Association. Mr. Stevenson differed from Secretary Davies about the limit the rules applied to, and said that his assertion could be corroborated if the minute book could be produced.

Crown Attorney Washington conducted the prosecution. George Lynch-Staunton, defending the plumbers, objected frequently to evidence, which he claimed had no bearing on the charges on which they were being tried. He intimated

Merrell Portable Hand Machines

Nos. 5, 6, 9 and 11

The chasers of these machines can be sharpened by grinding and can readily be replaced by chasers, cutting any style or pitch of thread, either right or left. Power is applied by either crank or ratchet lever to the shaft of the pinion, which engages the geared wheel enclosing the dies. The gears are completely housed from dust, and chips are not accessible to any part of the machine to its detriment. No. 9 cuts and threads pipe 2½ to 8 inches inclusive.

GLAUBER, CLEVELAND, OHIO, U.S.A.

—buy branded pipe; you're sure then—

Simply putting the brand on the pipe doesn't make it better pipe—

Unless we put the "better" into the pipe first, we'd not DARE brand it.

That brand, put right into the metal every three feet while the pipe is hot, means we guarantee the pipe's quality.

"Guarantee" means all that it ought to mean to you—and that's a lot.

Maybe you think our prices for P-H pipe show the quality we put in the goods? They don't—

This better pipe costs you just as much as the kind you buy WITHOUT any guarantee—and that the makers aren't sure enough about to brand.

Will you read the book that makes the whole story plain?

Glad to send you a copy as soon as you ask.

THE ARMSTRONG MFG. CO.

BRIDGEPORT, CONN.

that the Crown was simply endeavoring to work up another charge. Most of the objections were over-ruled, as the magistrate held that the inquiry should have wide scope and nothing kept out that might be permitted at the higher court. Stevenson was on the stand for nearly an hour and a half, and underwent a severe cross-examination. The case was resumed on Friday, and Mr. Staunton said that when he got a copy of the rules he would have some further questions to put to Mr. Stevenson.

The first witness was J. Harris, secretary of the journeymen's union. He admitted that there was an agreement between the union and the Master Plumbers' Association. When the trouble arose in Toronto the local masters disbanded and the agreement became void. When George Stevenson violated the rules of the association the union was notified by getting a list of bosses in good standing. Stevenson's men were called out as he was not on the list, the union agreeing that its members would work only for bosses connected with the association.

Mr. Stevenson explained that the trouble which caused him to be dropped from the association was a $20,000 job he did for Jas. Morton at Toronto. The Hamilton plumbers wanted to give this to the Toronto association because Stevenson was infringing on the rights of the Toronto men. He could not get supplies from several Toronto houses openly, but some with whom he had dealt for years sent him supplies secretly, putting private marks on the cases. Stevenson swore he was ordered to add 15 per cent. on a day job, in addition to his regular profit. Ten per cent. of this was to go to the association. On contract work 5 per cent. went to the association.

Crown Attorney Washington said he hoped by books and documents from Toronto to show that the Hamilton association was a branch of the provincial one.

WINNIPEG PLUMBING CRITICISED.

A number of journeymen plumbers waited upon the Winnipeg Board of Works a few nights ago. The delegation asked that when a new plumbing by-law was drawn up they should be consulted. The party consisted of E. A. Bailey, R. Thompson, J. Simmonds, J. Mackie, T. Sova, Geo. Gosling and J. Cooper.

"The plumbing that is done in Winnipeg," said Mr. Bailey, "is simply rotten. It would not be put up with in any other city on the continent. You talk about smells from your sewers but you have them in your houses. We have to put it in to hold our jobs, but the class of work is something fierce."

Ald. Harvey asked whose fault this was and Mr. Bailey replied that it was the fault of the city council. Five years ago they had as good a plumbing by-law as anywhere, and as the council took no action when their attention was called to it, that had been as the standard of work for the city.

PLUMBERS' UNION OFFICERS.

The Toronto Plumbers' Union has decided to subject all applicants for membership to an examination in writing and in practical work. An examining board has been appointed, comprising Mr. W. J. Storey, W. Bush, W. Gray, and C. Horn. The following are the officers of the union for 1906: President, William Bush; vice-president, J. Gilbert; past president, W. J. Brayborn; financial secretary, James Richards; recording secretary, G. Kingsford; inside guard, J. Stacey; outside guard, C. Horn (acclamation); treasurer, T. Maxwell.

PLUMBERS' FRAUD CASES.

As announced last week the conspiracy cases against Toronto plumbers were all concluded so far as the preliminary trials were concerned, practically every person charged with conspiracy being committed for trial at the January Assizes. The fraud cases against firms which participated in the giving of I.O.U.'s were, however, not settled. The first one, in which it was charged that $500 was added to the Isolation Hospital contract and divided amongst unsuccessful tenderers, was gone on with Friday, the 22nd, and adjourned until the following Thursday.

* * *

This information, sworn to by Detective Verney, charges "that Henry Hogarth, William J. McGuire, Robt. W. Harrison, Chas. Robertson, Geo. Wallis, Joseph Clapperton, Joseph Wright, Fred Armstrong, James H. Wilson, Watson Mashinter, A. Welch, Francis R. Maxwell, Herbert Johnson, Alexander Purdy, William Mansell, Kenneth J. Allison and William J. Williams, in the month of June, in the year of our Lord one thousand nine hundred and three, in the city of Toronto, in the county of York, did unlawfully conspire, the one with the other or others, by deceit and falsehood and other fraudulent means, to defraud the municipality of the city of Toronto of the sum of $500 of lawful money of Canada."

* * *

Mr. W. R. Riddell, K.C., for the defence, said he was not ready to go on and suggested that later on he might be able to "shorten the proceedings materially."

"How?" asked the magistrate.

"There's such a thing as pleading guilty."

"There's such a thing," replied His Worship, "of going to a higher court. I don't propose trying these cases. They are too important. It is a very important matter and a very serious case. If there was a conviction before me, I would not fine, because the law is dead against this sort of business. I'm speaking frankly."

Mr. Riddell said that he was in the hands of the court.

* * *

In reply to questions from the magistrate, Joseph Harrison, the first witness, said that there had been eleven I.O.U.'s for $20 on the plumbing and the same number for $25 on the ventilating. The former had been circulated by K. G. Allison and the latter by Fiddes & Hogarth. They amounted in all to $220 and $275. Mr. Riddell contended that the I.O.U.'s were to recompense unsuccessful tenderers for their time and trouble in tendering. In the evidence it transpired that the city treasury had been reimbursed by the repayment of the $500.

* * *

The other three informations for fraud were not investigated, the whole matter being let stand until the "tack combine" case was proceeded with on the 28th when those named above were committed for trial. The other three cases were let stand until next week.

ELECTRIC REFRIGERATION.

Ever since the perfection of the cold storage plant, money and brains have been expended in producing an iceless refrigerator. It was generally conceded that there was a demand on the part of dairymen, soda fountain proprietors, saloon keepers, butchers, and grocerymen for something that would make them independent of the iceman, and this seems at last to have been accomplished. Besides being a great convenience, the new refrigerator has a number of other recommendations, notably its cleanliness. Because of the great amount of moisture in the interior of the refrigerator, and because of the material usually stored within, the walls tend to become foul unless cleaned with scrupulous care at frequent intervals. This condition is brought about all the more quickly where the ice is not pure. Moreover, the charging of the ice receptacle every day is a nuisance. All this is done away with by means of electric refrigeration.

The electric refrigerator is a self-contained and automatic cold storage plant in a small way. It almost takes care of itself. The switch controlling the electric current is the only part that must be manipulated.

A refrigerator of this kind has been in operation for some time as an experiment in a Philadelphia grocery store. When the store is opened in the morning, the current is turned on and remains so during the day. Although the box is being constantly opened and closed, the temperature is maintained at 34 degrees. About the best temperature obtainable by the ordinary method of icing is 40 to 42 degrees. When the store is closed for the night the current is shut off, and the temperature remains constant all night. The difference shown by the mercury between the closing and opening hours is never more than one degree. During all this time no operating expenses whatever have been incurred.

The largest soda fountain in Philadelphia has been in operation for several months, and the materials drawn therefrom have been uniformly several degrees colder than could be secured with the use of shaved ice, and yet no ice has been used in it. A motor of one-half horse-power in the cellar operates a refriegrating plant, which not only keeps the fountain at a frigid temperature, but also does some additional work of a similar character in the cellar.

The iceless refrigerator is much the same in appearance as any large refrigerator. In a compartment at one end a motor and all the necessary compressors and other paraphernalia are contained. The place usually occupied by the ice is given over to a tank containing brine, which is the means of cooling the inferior of the refrigerator. The principle is identical with that of the large refrigerating establishments, but this is the first time that the system has been reduced to an automatic basis. No expert knowledge of either electricity or refrigeration is required in order to operate one of these outfits.

PLUMBING MARKETS

ONTARIO.

Office of HARDWARE AND METAL.
10 Front Street East,
Toronto, Dec. 29, 1905.

INCREASES on brass goods are considered likely very shortly owing to the continued high prices of copper. A 10 per cent. advance has been made in the States. American enameled ware is another line which is booked for an increase, in the opinion of shrewd buyers.

Business during the week has been very dull, but a revival is looked for after the middle of January.

Last week's quotations are unchanged:

Lead Pipe—A normal demand exists with prices held firm. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 20 per cent.

Soil Pipe and Fittings—No falling off is reported as yet. Prices continue firm. We quote as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe—Business continues satisfactory and the market is strong. We are quoting the following prices: Black, 1-4 inch, $2.09; 3-8, $2.09; 1-2 inch, $2.45; 3-4 inch, $3.05; 1 inch, $4.37; 1 1-4 inch, $5.96; 1 1-2 inch, $7.15; 2 inch, $9.54; 2 1-2 inch, $15.00; 3 inch, $19.35; galvanized, 1-4 inch, $2.91; 3-8 inch, $2.91; 1-2 inch, $3.27; 3-4 inch, $4.20; 1 inch, $6.02; 1 1-4 inch, $8.22; 1 1-2 inch, $9.86; 2 inch, $13.14; 2 1-2 inch, $21.45; 3 inch, $28.05.

Iron Pipe Fittings—Trade continues good owing to the heavy demand for heating supplies. We quote: Cast iron, elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hookplates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Galvanized Iron Range Boilers—Prices continue unchanged with trade quite active. Our quotations are as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11.00; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

Solder—Business continues lively with prices well maintained. We quote as follows: Bar solder, half-and-half, guaranteed, 21 1-2c. and wiping at 20c.

Enameled Ware—The Standard Ideal Sanitary Co. report that their output is booked ahead until about April. The demand for their Canadian ware has been enormous, but with the doubling in the size of their plant they will be well able to handle next season's business. We quote as follows: Baths, rolled rim, 5 feet, 2 1-2 inch rim, first quality, $18.65; special, $16.65; 3 inch rim, first quality, $19.15; special, $18.15; 5 1-2 feet, 2 1-2 inch rim, first quality, $20.15; special, $18.15; 3 inch rim, first quality, $21.65; special, $19.65. Lavatories, discounts, first quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, first quality, $2.55; special, $2.40.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, December 29, 1905.

SUPPLY houses feel gratified at the good volume of business which is keeping up to the close of the year. Dealers report that their staffs are being kept busy shipping goods.

Prices in all lines keep very firm. Lead pipe is now quoted at 20 per cent. discount, and Jenkins valves (globe, angle and checks) are now 42 1-2 off list.

Range Boilers — Normal conditions prevail. We quote as follows: Iron clad, 30 gallon, $6.00, and 40 gallon, $7.50 net; copper, 30 gallon, $22.00; 35 gallon, $24.00; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—The discount has been changed to 20 per cent., the advance being due to the steady rise in pig lead. Our prices are as follows: Discounts 20 per cent. f.o.b. Montreal, Toronto St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—The scarcity reported has been overcome to a certain extent, but it is still difficult to obtain deliveries. Our prices are: Discounts on all sizes of nipples up to 6 inch, 67 1-2 to 70 per cent.

Iron Pipe—The demand keeps very strong and prices are steadily maintained, which we quote as follows: Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $5.50 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.: 1-2 inch, 71 1-2 per cent.; 3-4 inch, and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15,000; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 71 per cent., and for galvanized 61 per cent.

Soil Pipe and Fittings—Trade shows no let up. We are quoting: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent off.

Solder—We continue to quote the following prices: Bar solder, half-and-half, guaranteed, 22c.; No. 2 (wiping solder), 18c.

THE "TO-LET" SIGN UP.

Since the inception of the conspiracy trials very little business has been done in the offices of the Master Plumbers' and Steamfitters' Co-operative Association, and about a month ago the doors were closed to visitors. The "To Let" sign now appears on the windows and the office fixtures are being disposed of. The association can now be considered practically out of existence, although Secretary Meredith's engagement does not terminate until next May. No efforts to re-organize are likely to be made until next Spring or Summer.

PAPER GAS PIPES.

Paper gas pipes are among the novelties to be reported from Europe. It appears that paper can be used to advantage for this purpose. As to the method of manufacturing the pipes, manilla paper is cut up into strips whose width is equal to the length of the pipe section to be used. The paper bands are then passed into a vessel filled with melted asphalt. After coming out of the bath the prepared strip is rolled uniformly and very tightly around an iron rod or pipe which serves as the core and has the same diameter which the gas pipe is to have. The rolling of the paper is stopped when the right thickness has been secured. After the pipe section which is thus formed has been put through a high pressure it is covered on the outside by a layer of sand which is pressed into the asphalt while still hot. Then the whole is cooled off by placing it in water. The core is taken out and the outer surface of the pipe is treated with a waterproof compound. It is said that the pipe is very tight and is cheaper than metal piping.

"Please shut the door" will be the national watchword for the next few months. A way to get rid of it is to install a good door check and spring. The door will do its own closing then. You might sell a number of these to your fellow merchants, too.

THE MINING CONVENTION.

SHARP controversy between miners and men financially interested in mining existed at the mining convention, which concluded its sessions in Toronto last Saturday. Hon. Frank Cochrane, minister of mines, in referring to charges of favoritism in securing mining locations said: "Pull is dead and is not going to be resurrected. I intend to administer the mining laws to the best of my ability, and justice and equity will come first."

It was decided that it would be injudicious to provide for payment of any royalty or for a special tax applicable to the mining industry, and it was further resolved that there should be only one mining law for the whole of the province.

Another resolution passed was to the effect that all lands of the Crown, whether timbered or not, should be always open for exploration and sale, and never, under any circumstances, be withdrawn by order-in-council or otherwise; that when a discovery of mineral is made a location title be issued to the discoverer, so that he may have a negotiable interest; that after such discovery the owner of a timber berth be given a limited time, say three years, to remove the pine, after which the ownership of the mineral discovery shall be absolute; and that New Ontario and other mining sections should be formed into recording districts, where all applications would be on file and open to public inspection. Amongst other resolutions passed were the following:

"That the Ontario Government grant to the ore-producer a bounty for the production of pig iron by Ontario furnaces when such iron is made wholly from Ontario ores.

"That although it is desirable that assistance be given by the Dominion Government in the way of bounties on pig iron smelted in the Dominion, the convention protests against the present system of bounties on iron smelted from foreign ores, and asks that the same be discontinued when the present law expires in June, 1907, but that the bounty on pig iron made from domestic ore be placed at $3 per ton for the next five years.

"That the Province of Ontario should erect a smelter and refinery capable of refining the silver-cobalt ores, and should make provision for refining the copper and nickel ores of the province.

"That the Dominion Government be recommended to admit coal free of duty, if used to make coke to be used for the smelting or treatment of iron ore."

It was also decided not to form an independent provincial organization in view of the fact that the miners at various centres have decided to form local organizations, which may affiliate with the Canadian Mining Institute.

A LARGE CONTRACT.

The Fredericton, N.B., city council has awarded the contract for putting in a modern sewerage system. Work will begin early next Spring. Contract was awarded to J. B. McManus, Limited, of Memramcook, N.B., for $42,000. The engineers' estimate of the cost was $61,000. The city is to supply all pipe and material at an estimated cost of $21,000.

FIREPROOF BUILDINGS.

CHICAGO may have been the birthplace of the modern fireproof structures, more especially the "skyscraper," but to-day New York City can boast of a larger number of buildings of that type than is to be found in all other cities in the United States and Canada put together. Figures compiled by the New York Fire Insurance Exchange show that in the boroughs of Manhattan and the Bronx there are 1,389 fireproof buildings; in Brooklyn, 113; in Jersey City, Hoboken, etc., 28, making a total of 1,530 such buildings located in the territory under the jurisdiction of the Exchange. In twenty other cities there are 1,490 fireproof buildings distributed as follows (Baltimore is not included, nor do the figures given include buildings under municipal ownership): Boston 265, Buffalo 86, Chicago 298, Cincinnati 51, Cleveland 48, Detroit 8, Indianapolis 10, Louisville 14, Milwaukee 32, Montreal 35, Newark 45, New Orleans 10, Philadelphia 166, Pittsburg 100, Providence 23, Rochester 46, San Francisco 40, St. Louis 190, Syracuse 6, Toronto 17. Total, 1,490.

Some dealers, when making their carver display, place fine tissue paper to protect the cloth in the display boxes so that the goods may be delivered to the purchaser in prime order.

MUELLER FULLER WORK

Standard Grade Bibb

You can take one make of fuller bibb apart about as quickly as you can one of another make, but when it comes to assembling them again you will find a vast difference in the time required.

In Mueller Fuller Bibbs the packing is made in one piece which slips over the stem just like a washer, and the eccentric stem is tapered at the end so as to easily enter the ball stem hole, even though the latter be a little out of position. They can be assembled as quickly as they can be taken apart.

Mueller Fuller Bibbs are made in plain and hose patterns, and with tail pieces for all styles of pipe connection. Iron pipe tail pieces have the hexagon on either end desired. The bibb illustrated is the plain pattern with lead pipe tail piece.

Each bibb bears the Mueller trade mark and is *unconditionally guaranteed.*

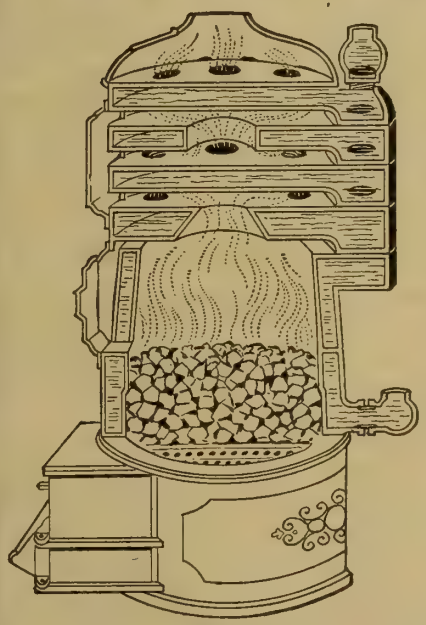
Mantels, Grates, Tile, etc.

A Nice Mantel is a fine piece of Furniture.

Batty Stove and Hardware Co.
182 Adelaide Street West

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.



A BETTER WAY

Business comes easier to the dealer who features the Oxford lines. His customers are absolutely and lastingly satisfied—they advertise the superiority of his wares and bring other customers along to his place.

To disappoint a customer, even in a little thing, is bad business. To disappoint a customer in a heating system will damage the best business in the country.

You can depend on the

OXFORD HEATING SYSTEM

to give perfect satisfaction. It will always make you friends as well as money.

The Oxford ("B" Series) Boiler is the most powerful and economical heating apparatus. A glance at the improved construction of the fire pot is enough to convince all practical men of its superiority. The immensely increased heating capacity obtained by the overhung upper walls is apparent at once. This, in conjunction with the extra deep first water section with bell-shaped flues, still further increases the heating power, insuring fuel economy.

We use our Oxford Steel Push Nipples in making all connections—a permanent metal-to-metal joint.

The **OXFORD STEAM** and **HOT WATER RADIATORS** used in combination with Oxford Boilers mean comfort, economy, universal satisfaction and more business.

Talk the Oxford Heating System now and you won't have to complain of dull times.

Send for the Gurney Oxford Book of Steam and Hot Water Heating Apparatus.

WE also manufacture Cast Iron Stoves and Ranges, Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges, Warm Air Furnaces and all kinds of Cooking and Heating Apparatus, Plumbers' Supplies,

WE WANT YOU TO REALIZE

THAT IF YOU ARE NEGLECTING TO ORDER A SUPPLY OF

"BLACK DIAMOND"

BUILDING PAPER
READY ROOFING

TARRED FELTS
WRAPPING PAPER

You are neglecting to seize "sure-trade" opportunities. "Black Diamond" goods sell readily because they are the best that can be got.

"Cyclone" and "Joliette" brands of **SHEATHING** are profitable lines to carry also. They bear the stamp of merit.

Don't you want the best goods?

ALEX. McARTHUR & CO., Limited, MONTREAL

82 McGILL STREET

F. J. C. COX, Winnipeg, Sole Agent for Northwest Provinces.

CURRENT MARKET QUOTATIONS.

Dec. 29, 1905.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

They All Roll Best—The Best All Roll on "Storm King Barn Door Track"

The superiority of **Storm King Track** is due to carefully selected material, good workmanship and perfection in every detail. **Storm King Rail** possesses all the salable qualities that go to make it what it is—the best Barn Door Rail made in Canada.

Every piece stamped "Genuine Storm King," with our name. Insist on securing this brand.

MADE BY

Ask Your Jobber

SAFETY DOOR HANGER CO., - Hamilton, Canada

Walker's Quick and Easy Meat and Fruit Juice Press

Made to clamp to the table or hold in the hand. They are made in three sizes and three styles of each size; capacity, one-half pound of meat at a press full.

As all the juice is out as soon as screwed down, several pounds can be pressed in short space of time. The real capacity is equal to others of larger and more expensive prices.

...ooks for Plumbers, Steam Fitters, Etc.

Furnace Heating

By W. G. Snow.

The author has prepared a book of reference for the furnace man or the architect. There are tables which have been tested by years of practical use. They are of great value to the practical furnace man.

170 pages, 6 x 9 in.; 90 illustrations; cloth bound.

Price, post paid, - - $1.50

(This book has had a heavy sale in Canada.)

* * *

Kitchen Boiler Connections.

A selection of practical letters and articles relating to water backs and range boilers.

The work is divided into two parts, the first on water backs and boilers and their connections, and the second on heating rooms from range boilers, a topic that has much practical interest to the plumber. There are few lines of work where so many little difficulties arise, and therefore the discussion of different questions which have arisen should be of great interest as well as practical value to workers in this line.

Fifth enlarged edition; 194 pages; 6 x 9¼ inches; 113 illustrations.

Cloth, post paid, - - $1

* * *

Formulas and Tables for Heating.

Being German formulas and tables for heating and ventilating work, for those who plan or erect heating apparatus. By J. H. Kinealy, M.E.; 56 pages; 4½ x 7 inches; leather.

Price, post paid, - - $1

* * *

American Sanitary Plumbing.

By J. J. Lawler.

For plumbers, steam fitters, architects, builders, apprentices, etc. Containing practical information of all the principles involved in the mechanics and science of modern plumbing, illustrating with original sketches the fundamental principles of everything the plumber should know. Everything explained in the most simple language, so that it will be impossible to misunderstand anything.

Large 12mo, cloth, post paid, - $2

Steam and Hot Water Fitters' Text Book.

A book prepared for the Steam and Hot Water Heating Course at the New York Trade School, with supplementary chapters on house heating, specifications and surface estimating; by Thos. E. McNeill.

This book will be appreciated by those who wish to master the principles of steam and hot water heating. The definitions in the beginning deal with the appliances, and little by little the reader is led on until at the close he is informed how to figure surfaces, lay out plans and install heating apparatus with the necessary piping.

140 pages; numerous illustrations and diagrams; 5 x 7 inches.

Cloth, post paid. - - $1

* * *

Plumbing and House Draining Problems

A selection of articles for practical plumbers.

This volume provides reliable and practical information for ready reference and assistance to plumbers who are confronted by problems with which they have had no previous experience. One-half of the edition is devoted to new problems and special articles. This book will prove a valuable reference in any plumber's library.

297 pages; 6 x 9 inches; 146 illustrations.

Cloth, post paid, - - $2

* * *

Practical Gas Fittings.

Describing how to run mains, lay pipes and put up gas fixtures. 116 pages; 54 illustrations; 5¾ x 8 inches.

Cloth, post paid, - - $1

* * *

Practical Hints on Joint Wiping.

A book containing articles on practical joint wiping for beginners in plumbing, with an appendix giving a selection of practical letters and articles.

66 pages; 5½ x 8; 41 illustrations.

Paper, post paid, - - 25c.

MYERS' HAY TOOLS

Fig. 266.

Floor Hook

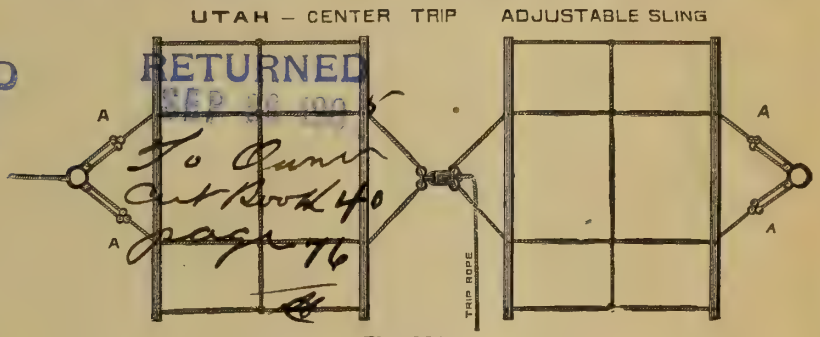

Fig. 621

Fig. 621 illustrates the **Utah Center Trip Adjustable Sling**, which has all the advantages of the Myers Center Trip Adjustable Sling, with the following changes: Instead of a three-foot cross-bar, the Utah has a six-foot, which extends beyond the side-ropes eighteen inches on either side, to which is attached an additional rope, and also a cross-rope attached to each of the main ropes, as shown in the cut. This sling really forms a net, and is designed to carry fine stuff. We also stock No. 620.

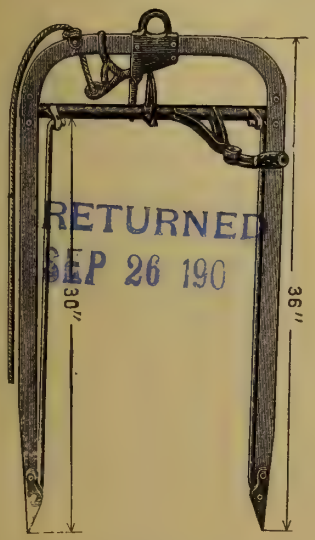

Fig. 670

Fig. 670 illustrates the **Myers Lock Lever Harpoon Hay Fork.** This fork is 19 inches wide, is made of spring steel; sets with one lever and locks open. While it is not larger than the regular double harpoon (except in width), it has 50 per cent. more capacity, owing to the cross-bar being placed nearer the top; and it gathers the grain or hay from the end of point, not two inches from the bottom, as all old-style forks do. We also stock No. 268.

SUCCESSFUL ADVERTISING

How to Accomplish It

By J. ANGUS MacDONALD

Competent critics have recognized this as the **Best Book on Advertising** yet published. It is a PRACTICAL work for advertisers and business men.

The *Brooklyn Eagle* says of Successful Advertising :

"Advertising is one of the biggest businesses—perhaps the biggest business—in the world. To treat of it comprehensively is as difficult as to treat comprehensively of military strategy or the making of a newspaper. Mr. MacDonald has succeeded. He has produced an admirable and exhaustive monograph.

"Perhaps the deepest pitfall into which an author might fall in writing upon such a subject as this is too much theory and not sufficient practicality. Most happily has Mr. MacDonald avoided this chasm: he writes from practical experience in the field, and his methods as presented have been given the thorough tests of time and circumstances.

"Any one with even a superficial knowledge of advertising cannot but perceive that in the many examples shown are evidenced a thorough knowledge of the subject and a businesslike and practical grasp of advertising which is far removed from the light, airy and entirely impractical and hare-brained stuff which is not uncommon in literature treating of the subject of advertising."

The General Advertiser, The Retail Advertiser, The Advertising Writer, The Mail Order Advertiser will find this work invaluable. The price is out of proportion to its worth. Cloth bound. 400 pages.

Postpaid $2.00 per copy

LEADING HARDWARE STORES

TOWERING above the buildings which surround it, and so high that it affords a magnificent panoramic view of the whole city, the new seven-storey building of Emerson & Fisher, hardware merchants, stands at 25 Germain street, St. John, N.B., a perpetual monument to the industry and success which have attended that firm since their establishment in that city.

With the busy throngs that pass up and down King street only a quarter block away, a more suitable situation could not be desired, and its proximity to the country market also makes the location convenient for the busy shopper.

When the members of the firm decided that, owing to increased business, it would be necessary for them to abandon their Prince William street quarters and erect a building which would be more adapted to their purpose, they took for their motto in connection with the structure the four words: "Strength, light, space, and convenience," and the building recently finished shows the wisdom of such a course. Being the largest building of its kind in the city, a detailed description of the interior, with its numerous compartments, will be of more than usual interest.

The two upper flats, the sixth and seventh storeys, are each 100 feet long by 60 feet wide, and are set apart entirely for the heavy stock which is taken up from the ground floors in a large electric elevator.

On the opposite side of the building is a smaller elevator used principally for the conveyance of customers, or members of the staff. Besides these elevators, huge stairways on either side of the building run down to the lower floors.

The fifth flat is devoted to manufacturing purposes and for that reason is especially lighted by large windows in the side as well as the end walls of the room. In these windows is found what is known as wire glass—that is glass with wire netting embedded in both sides, having been placed there while the glass was in a molten state. This prevents the glass from breaking and falling out in case it should become overheated from a gas flame, etc., and protects it from a casual blow.

On this floor the firm have established an up-to-date soldering apparatus, by means of which a gas jet does away with the old-fashioned dirty charcoal stove. The apparatus is connected with an electric motor, which drives a "fanner," which in turn forces out a stream of air, giving strength to the flame beyond.

In another section of the room is stationed an electric motor for polishing the manufactured tinware. Not only do the firm insist on having such goods made strong and serviceable, but before they are placed on the market must be finished to a fine degree, and by means of this rapidly revolving electric polisher the ware comes out looking not unlike silver.

The fourth floor is used exclusively as a packing room. All boxes of goods are opened here and unpacked, and all shipments prepared.

In one corner is set apart what is called the strong room, in which is stored cutlery and other valuable articles of small dimensions.

The front part of the flat is divided into sections for the storing of goods ready to be shipped, or placed on exhibition for the wholesale customers. Each section has twelve tiers of shelves seventy feet long, ten feet high, and each shelf from two to three feet wide. These figures give a vague idea of the quantity of small ware that can be placed there in open view. Here and there one finds a little aperture by means of which customers or clerks can conveniently pass from one section to another. At the end of every section is a large window, which makes the whole flat as light as day, and along the broad open passageway a huge truck can be run back and forth, on which is moved all the heavy goods. In this apartment all available space is utilized, even the ceiling being fixed with hangers for the purpose of holding articles of such size and shape as they can dispose of there.

Coming down to the third flat one finds it peculiarly attractive, for here are placed all the fancy mantels and grates. It is, in fact, known as an auxiliary showroom, and is sixty feet by over one hundred feet long. The size, therefore, makes it most suitable for the display of the larger and bulkier lines of goods that cannot be accommodated in the main store. In this department Messrs. Emerson & Fisher have an elegant assortment of mantel pieces, fireplaces of every description, English and American tiles for fireplaces, walls and floors. This room is particularly well lighted, having large plate glass windows in the front and several smaller ones in the rear.

The right hand section contains furnaces, hotel ranges, cooking and heating stoves, churns, pumps, and goods of that description. It is interesting, indeed, to spend a half hour wandering around such an array of stoves and ranges. Large and small, fancy and plain, they sit there a temptation to the would-be purchaser. This class of goods is manufactured by the Enterprise Foundry Co., at Sackville, N.B.

In the rear of this flat is the tile

View of Retail Department of Emerson & Fisher's Store, St. John, N. B.

RE RNE
JUL 21 19
Jo Our
Art Dep
Page 19

room, where all kinds of tiles are unpacked and sorted. Next to it is the travelers' room, where those who go on the road can sort their samples unmolested by the busy staff outside. At the left are well equipped toilet rooms for men and women.

At the front of the building in the centre between the large plate glass windows is the motto of the foundry, "Enterprise Stoves and Ranges are the Best."

Coming to the ground floor one finds the whole store which is used for the retail trade wholly, finished in quarter cut oak. The windows at the Germain street entrance are the largest sheets of glass in the city, and in the space above each one is fixed with Luxfer prisms, which throws the light into the interior. In this store the firm have nearly sixty feet of "silent salesmen" and glass counters for the display of cutlery, plated ware and fancy goods. One of these which has attracted a great deal of interest is the pocket knife counter, where one hundred and eighty samples of pocket knives and razors are set on small plush covered pieces of wood, which can be taken out at will and handed to a customer to examine. Back of this is a great display of large knives for domestic use, padlocks and divers other kinds of hardware, and the latest methods have been adopted for presenting them to the view of the public. Each box, full of articles, has on the outside a sample of the contents, and all one has to do is to select from samples displayed without handling a lot of superfluous goods. The store is well equipped with traveling ladders. At the rear is the paint department, Emerson & Fisher being the local agents of Sherwin-Williams paints.

Near the front entrance is a unique arrangement for showing gardening implements. It is capable of holding 202 pieces, and being on rollers can be conveniently moved about. To the right of the store is also a line of leading stoves and ranges. The spacious, well furnished offices are at the rear. They are pleasantly situated as regards light and ventilation, and, as well as all other points of the building, are lighted with electricity.

Coming to the basement one finds all the latest arrangements for handling heavy goods. Large double doors open into the yard at the rear, and teams can back or drive in, as the case may be. At the front are several windows of prismatic glass which light the basement thoroughly.

In the spacious yard to the year of the building are the firm's stables, carriage houses, etc., and a large arch driveway leads to them from the front street. This driveway has been encased so that it is practically fireproof, and on the inside is a massive door opening to the big elevator, which makes it possible for teams to drive alongside and deposit freight for the top floor on to the elevator with a great saving of labor.

From the driveway stairs lead to every floor, and these are set apart for the employes, who thus enter the building without disturbing the clerks or office staff. Over the driveway is a supplementary flat, one end of which is used for an advertising den.

Other features of the building are the large standpipe running from top to bottom for hose attachment in case of fire, the dumb waiter connecting the different floors and the internal telephone which runs to every department of the building. The whole structure reflects credit on the architect and firm.

The formal opening of the new building took place the middle of May, and since then a most satisfactory business has been carried on. Settled in such magnificent quarters, there is no reason why Messrs. Emerson & Fisher should not further increase their already large business, their facilities for handling the increased trade being of the very best.

HENRY PHIPPS, PARTNER OF ANDREW CARNEGIE.

HARDLY one reader in a million knows that a Phipps rather than a Carnegie or a Frick laid the keel and steered the great Steel Craft over its first trial course. Yet the story of his career is even more romantic than that of his associates, for, unlike many of them, he owes nothing to speculation.

He began with nothing—in Philadelphia—and by sheer Anglo-American grit, foresight, and unwearying application built up a fortune nearly a hundred storeys high, each storey representing a million of money. Those who know say that, excepting the latest phase of it, when more than five hundred millions were paid for what a year before could have been bought for three hundred millions, pluck, shorn entirely of luck, was the principal ingredient of his success. He avoided taking chances, and he never pocketed a profit that was not earned in the strictest sense of the word—in which quality his great fortune is probably unique.

* * *

Born in Philadelphia in 1839, he inherited from a hard-working father the physical alertness which remains his dominant characteristic. From his mother, who, with his father, was English before she became American, he acquired his mental qualities, including an abiding fondness for books. During his boyhood the family moved from Philadelphia to Allegheny, where the elder Phipps embarked with moderate success in the shoe business. His prospects were bright enough to warrant the employment of three or four assistants, one of whom is now a well-known Pittsburg millionaire. Yet in time the business must have dwindled, for we hear of young Phipps in 1852 earning a dollar and a quarter a week as general utility boy with a Pittsburg jeweler named Barton.

* * *

Eventually he was employed by a small merchant named Egan, whose only other distinction was the novelty of having been a monk and having eloped with a nun, who became his partner in business as well as in life. Their partnership not proving specially profitable, young Phipps one day borrowed 25 cents from his brother and advertised for another job. That was on May 10, 1856—a date which marked a turning point in his career. For the advertisement bore fruit in an answer from Dilworth & Bidwell, who pulled a slim oar in the iron business and incidentally acted as Pittsburg agents for the Du Pont Powder Co. Beginning with them as an office boy, the new employe soon was raised to a clerical stool, and afterward to a partnership with Bidwell, when the original firm dissolved. That was in 1861.

Shortly before the young man was of voting age he also became a silent partner and night bookkeeper for Kloman & Co., who had a small forge and foundry, or rather smithy, in the suburbs of Allegheny City. The Kloman shop was about three miles from the Phipps home, and the young bookkeeper had a rough and muddy road to travel to and from his nocturnal job. As time passed the business grew and dissensions arose, until the services of Andrew Carnegie, then in the employ of the Pennsylvania Railroad, were sought as arbitrator.

In 1862 the firm was known as Kloman & Phipps, with a capital of $60,000, from which microscopic germ grew the greatest steel business in the world. Meanwhile Andrew and Thomas Carnegie had acquired an interest in the Cyclops Iron Co., which in 1865 was merged with the Kloman-Phipps Foundry under the name of the Union Iron Mills, as they are known to-day. That Andrew Carnegie was disappointed over the transaction was shown in a reproachful letter which he wrote one of the parties, complaining that he had embarked in a most hazardous enterprise. This so-called hazard was one of new fortunes indeed, since the complainant found himself fortuitously thrust upon a road which was to lead him to a fortune of $250,000,000.

Andrew Carnegie, in return for his share of the Cyclops property and a fifty-thousand-dollar bonus, received a 40 per cent. interest in the new company, fifth interests being held respectively by Henry Phipps, Andrew Kloman, and Thomas Carnegie. Thus to an accident which gave one partner 40 per cent. and to the others each 20 per cent. of Union Iron Mills stock is due the prominence of Andrew Carnegie and the comparative obscurity of the others, omitting the extreme modesty of Henry Phipps.

* * *

As financial director of the Union Iron Mills he did not limit himself to office routine, but went into the mill and watched the men at work, studied the machinery, and familiarized himself with every detail of manufacture. Then he wandered into other mills, comparing methods and results and suggesting improvements and economies in his own.

On one of his trips abroad he was passing through a mill in Germany and noticed that the piles made ready for the heating furnace, to be used for rolling beams, contained more than double the amount of scrap iron rails used in Pittsburg. He quietly made a sketch of the pile, and on his return gave orders to change the piles at the Union Mills to correspond with the sketch. As a

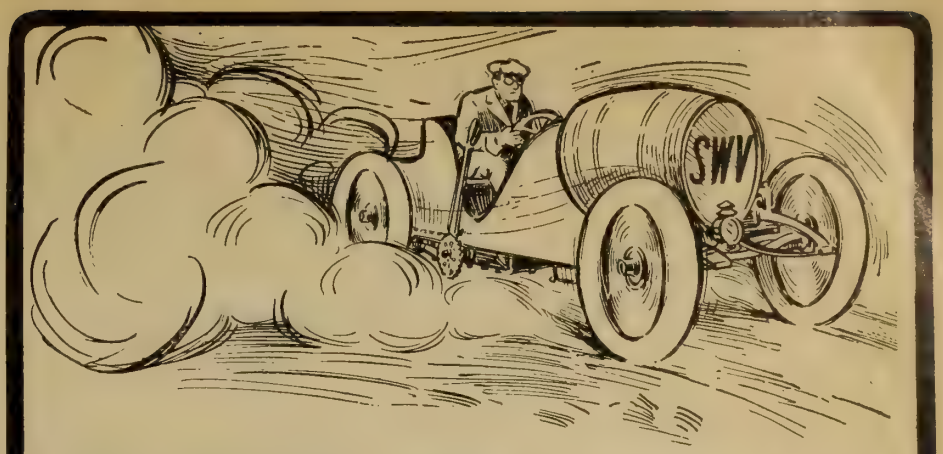
HAMILTON, ONT.

result the cost of his foreign sojourn was saved the firm almost daily thereafter.

As part of the inside history of the Carnegie Steel Co., another circumstance may be cited in which the ingenuity of Henry Phipps is shown. On this occasion he made a series of observations at two or three mills so quietly and unobtrusively that no one was aware of what was going on, and then did some careful figuring. Having cautiously verified his conclusions, he announced to his partners that at a cost of one-third the price for which he believed he could sell what was known as the Lower Mill, he could enlarge the Upper Mill so as to make its output equal to that of both.

His subsequent career is a summarization of the Pennsylvania steel and iron industry, which is a matter of general knowledge. Its evolution has been an eighth wonder of industrial history. From a capitalization of $5,000,000 in 1886 to $25,000,000 in 1892 and to $160,000,000 in 1899, it has spread like a colossus from Bessemer to Balmoral and beyond.



EARLY LAWN MOWERS.

THE use of lawn mowers dates back to the early years of the nineteenth century. The first patent on record was granted to Edward Budding, of Stroud, Glos., on October 25, 1830. He was a draughtsman with some mechanical ability, being the inventor of the improved Budding wrench and many machines used in the manufacture of woolen cloths. He was for a time superintendent for a manufacturer of woolen goods at Dursley, and doubtless the clipping-machine used in trimming the woolen fabrics suggested the invention of the lawn-mower. A descriptive circular of the lawn-mower, dated 1830, shows that three sizes were then offered, to cut swaths 16 inches, 19 inches, and 22 inches wide. These mowers were manufactured by the Phoenix Ironworks, near Stroud.

While there are other claims for the priority of invention, Edward Budding is undoubtedly entitled to all credit as the inventor of the first lawn-mower.

Lawn-mowers were not extensively used prior to 1855, and were at that time manufactured only in Great Britain. In the early part of that decade, Mr. A. Waterer, of Woking, Surrey, sent an English lawn-mower to a friend residing at Fishkill-on-the-Hudson, New York, which was without doubt the first lawn-mower used in America. Living in the same town was a mechanic by the name of Thomas Coldwell, a native of Lancashire, who was called upon at times to sharpen and repair this English mower. He soon became convinced that this mower could be greatly improved, and his mechanical ideas prompted him to manufacture the first American-made lawn-mower, which was somewhat after the pattern of the English machine, but he improved on it from time to time, and continued to manufacture until 1869. The total sales, however, would not exceed 200 machines per annum, as they were clumsy and quite expensive. A lawn-mower with 14-inch cut sold in those days at $45.

In the year 1869, Thomas Coldwell and George L. Chadborn jointly invented a new lawn-mower, much lighter than any which had preceded it. These inventors, in connection with others, organized a company which was incorporated under the name of the Chadborn & Coldwell Manufacturing Co., Mr. Thomas Coldwell being elected president, which office was held by him until 1891. Their new machine was known as the "New Excelsior," which has had a large sale in all parts of the world, and still holds a prominent position on the market.

SHERWIN-WILLIAMS VARNISHES LEAD

in quality, satisfaction and wear. They can't be beat. The dealer who sells them controls the varnish business of his locality and gets the greatest varnish profits. There's a reason.

S-W. Varnishes satisfy

The customer who demands best appearance and wear at an economical cost.

The painter who wants the right working and drying qualities in varnish.

The dealer who demands best quality and good profit.

We have the facilities and capital to make good varnish. Importing the gums direct and sorting them ourselves, making our own strictly pure linseed oil, making a special drier for each kind of varnish, equipped with most modern machinery and skilled workmen we are able to give the best varnish value for the money. *Write today for prices,*

TWO GREAT EVILS.

OVERMEASURE and overweight are difficult to control in every store, says an exchange.

The statement is true, and the merchant needs to be on the lookout all of the time for these deviations from good business rules. Many people who lack good sense and good principle are forever tempting the clerk to do the wrong thing.

They ask him for overweight and overmeasure as a premium for their business. Once they find that he will succumb to the temptation they give him to understand that he is holding their trade because he is more liberal than others in the store.

There are many small people who think that an extra quarter yard or an ounce or two overweight is worth walking around the block after.

You have seen them in your store. They hang around until some certain clerk can wait on them. He is the clerk who gives the down weight and an extra measure.

Watch for those weak spots? When you find them, handle the situation diplomatically. You can handle it so as to drive the grafting trade away from the store, or you may be able to handle it so as to hold these customers.

But above all things drive overweight and overmeasure out of your store system. Here is where constantly coaching the clerks will accomplish a great deal.

INCREASED CAPITAL STOCK.

The Rolla L. Crain Co., Limited, Ottawa, manufacturers of loose leaf systems, have been granted supplementary letters patent increasing their capital stock to $100,000. The firm have found this move absolutely necessary owing to the increasing demand for their goods. They have, during the past year, more than doubled their capacity, and now stand out in the forefront of manufacturers in Canada.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

Lavatory Hinges and Spring Butts.

A HANDSOMELY illustrated catalogue of some thirty pages has been received from the Chicago Spring Butt Co., of Chicago and New York. The information and data in general is evenly balanced throughout, and deals with the different styles of spring hinges, hangers, door handles, and several patterns of swing doors manufactured by this company. Price lists are also given in connection with the different articles spoken of in this booklet. Included in the book is a special list of lavatory spring hinges and attachments adapted to all classes of lavatory construction. The book is bound in the loose-leaf system and all buyers of the above goods should file away a copy of the catalogue. It is worth the trouble of sending for and can be secured by merely mentioning this journal when writing.

"Please Close the Door."

James Smart Mfg. Co., Limited, Brockville, have gotten out an attractive tin tablet to be tacked on store doors. It bears the request "Please close the door" in large letters, while underneath in black and gold a reminder is given of Kelsey warm air heaters. The tablets are handy and permanent articles, and can be secured by mentioning this offer in Hardware and Metal.

Steel Troughs.

Steel hog and stable troughs are tersely illustrated and described in a handy catalogue of steel goods just issued by the Steel Trough and Machine Co., Limited, Tweed, Ont. Prices and sizes accompany the illustrations, and hardwaremen who have a farmers' trade should secure a number of the booklets to show their customers. Mention Hardware and Metal when writing.

Signs for Retailers.

Martel-Stewart Co., Limited, Montreal, have issued an elaborate catalogue. As this company make signs of all descriptions, they manifest good judgment in abundantly illustrating their catalogue and using only the best of illustrations. The details are clear-cut, forceful and arranged with discretion throughout. The typography is first class. A copy of this catalogue can be had by mentioning Hardware and Metal.

Springs and Axles.

"Anchor Brand" carriage and wagon springs and axles are pictured and written about in a plain and easily-understood manner in catalogue No. 12, just issued by the Guelph Spring and Axle Co., Limited, Guelph. While the company has had 28 years' experience in manufacturing this line, they have, during the past year, increased their capacity for manufacturing fully 75 per cent. and have also introduced many new features in their new catalogue. The book is of 40 pages and cover and contains price lists and descriptive tables. It will be mailed to any reader who mentions having seen this offer in Hardware and Metal.

IVER JOHNSON'S ARMS & CYCLE WORKS,
FITCHBURG, MASS.
New York Office: No. 99 Chambers Street.

"DO THE HARD THINGS FIRST."

A BANK president was asked to what one thing more than all others could he attribute his success. He pointed to a small printed motto which hung above his desk; it read: "Do The Hard Things First!"

"I came across that motto years ago," he said, "at a pivotal point in my life. I had for some time felt burdened by my position. That motto was a flashlight to my intelligence. I suddenly realized that I had been in the habit of putting off the disagreeable duties, of evading the unpleasant tasks, and they had formed a ghost which haunted me and held me back. I tacked up that motto and settled down to work on the disagreeable duties I had pushed aside; soon I had them out of the way, and ever afterwards I attempted the hardest thing first. I gave my freshest efforts to the work I dreaded most and I owe what is called my success largely to this awakening and change of tactics."

TO REMOVE.

The Nova Scotia Steel Co. directors have practically decided to remove their entire steel plant from New Glasgow to Sydney Mines, having been put to a great deal of unnecessary expense by maintaining two large plants in operation. By this removal the company will have its whole works centralized, which means a material reduction in the cost of production. The iron ore, instead of being taken to Pictou, will be landed at North Sydney, a shortening in the transportation of from 200 to 300 miles, and enabling them to land fully twice as much as at present. The company is drawing its steel workers from New Glasgow, about thirty having left to work at the new smelting furnaces at Sydney Mines. One of the furnaces at Trenton has already been taken down and removed to Sydney Mines, where the new plant is rapidly assuming practical shape.

NEW BINDER TWINE.

A new binder twine is shortly to be put on the market by the Commercial Binder Co., of Galt. It is entirely different to anything now in use. Instead of being composed of a number of loose strands, it resembles cat-gut, and is said to be cheaper and stronger than ordinary twine. The company will also have the sale for Canada of the Goff Binder, a machine for doing away with the use of twine in fastening up packages. This machine feeds out a strip of a gummed, specially-treated paper, and not only automatically moistens the gum on it, but at the same time prints on the tape any desired advertisement or trade mark. The strip is then applied to the loose ends or flaps of the paper which the parcel is wrapped in and the trick is done. The new material will also be turned into packages, pails, etc., for holding meats, fruits, liquids, paints, oils, etc., which will be waterproof, vermin-proof, and air-tight.

HEATING AND PLUMBING

LOCATION AND CARE OF STEAM GAUGES.

AS principles which cause steam gauges to give correct results are not always understood by men who have charge of them, the following illustrations and explanations taken

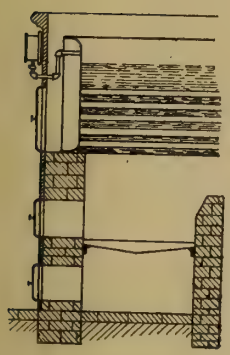

Fig. 1

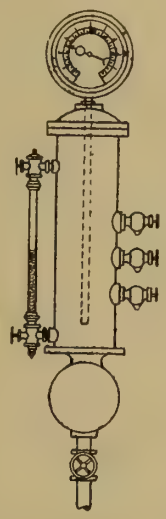

Fig. 3

from everyday practice will doubtless be of interest.

Fig. 1 shows a method of connecting gauges adopted by a firm that turns out hundreds of good tubular boilers. A ¼-inch pipe is connected into the front head above the water line. A loop is formed by nipples and ells, which causes water to stand in this pipe, thus protecting the gauge from the heat of the steam.

This method of connection works fairly well when the boiler is under a light load, but when the boiler is worked to its full capacity this little pipe is in the midst of hot gases on their way to the chimney, which heat it, and probably evaporate the water in the loop.

To avoid this possible danger, these pipes may be taken out of the boiler and located in plain sight. Each loop is connected into another pipe without a

Fig. 2

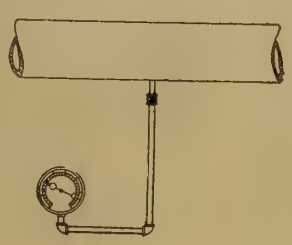

Fig. 4

valve between this connection and the steam space of boiler, although a valve may be placed in the small pipe near the connection. It is customary to locate a double-ended pet cock under the gauge in such a case, but it is omitted here, therefore leaks from the source do not annoy the fireman by dropping water on the furnace doors.

A union is located at this point so that when the pipe needs cleaning the ¼-inch valve is closed, the union disconnected and the valve opened under a full head of steam, thus blowing out all sediment. After this the pipe is allowed to cool; then the union is connected and steam turned on. Enough steam is condensed to protect the gauge. Where a pet cock is provided in a connecting pipe it is customary in some plants to draw the water out of this pipe frequently without shutting off the gauge, but this is wrong, because heat thus admitted to the spring injures it. Brass pipe should be used for such service as it does not corrode as quickly as iron pipe.

The siphon shown in Fig. 2 keeps water in the pipe at all times, but it has a disadvantage in that there is no provision made for cleaning it without disconnecting the gauge. Water cannot be drained out so that if the gauge is located in an exposed position the water is liable to freeze in cold weather, thus preventing the gauge from indicating correct uressure. Accidents have happened from this cause in the past, and probably will in the future.

Fig. 3 shows another plan for protecting a gauge. Under normal conditions this gives good results; but when the lower drip valve is opened to blow sediment out of the column the end of the connecting pipe, shown in dotted lines, is above the water line, so that steam is admitted to the gauge, endangering the spring.

The supposition that a good gauge will always correctly indicate the boiler pressure, regardless of the way in which it is connected, is erroneous, as the following illustrations will show.

Fig. 4 represents a low-pressure gauge attached to a steam-heating main. A column of water always stands in this pipe, and the vertical distance from the centre of the gauge to the top of this water is 8 feet 4 inches. The actual pressure at this point, without steam in the main pipe, is 3.6 pounds, due to the weight of the water. The dial of this gauge is graduated into pounds, so that the indicator should stand at about three-quarters of the distance between 3 and 4 pounds, when no steam is in the mains. When reading the pressure on this heating main, this amount should be subtracted from the pressure the gauge indicates.

Fig. 5 illustrates a gauge located on the floor above the boiler room. If a gauge so placed is piped so that all water drains back into the boiler, it will indicate correctly; but if the connecting pipe contains water, the gauge will indicate one pound less than correct steam pressure for each 27.7 inches vertical height of water. In other words, the result will be directly opposite to that obtained with the arrangement shown in Fig. 4, although both gauges may be correct.

Fig. 6 shows a steam gauge attached to a Manning boiler. It is connected into the shell just above the crown sheet, consequently the weight of water above the gauge creates a pressure which must be subtracted from the indicated pressure to obtain the true head of steam carried.

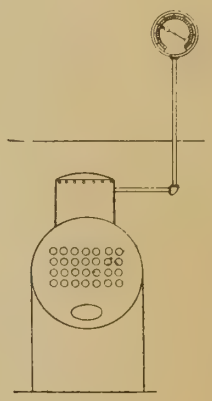

Fig. 5

In a plant where this kind of boiler is in use, the inspector objected to the pressure carried, as it was more than five pounds above the limit fixed. The engineer claimed that he was allowed to carry a certain steam pressure, and that the water as above described was responsible for the surplus pressure indicated. Now, the safe working pressure of a boiler as fixed by an insurance company is based on the estimated strength of the shell, heads and tubes; consequently the limit should not be exceeded, regardless of what causes said pressure. If a gauge located as shown in Fig. 6 shows 100 pounds, ten of which are due to weight of water, it is the same as if 100 pounds of steam were carried on a horizontal boiler, or one of the water tube type where the height of water is not enough to make much difference, therefore the gauge should never show more than the amount allowed.

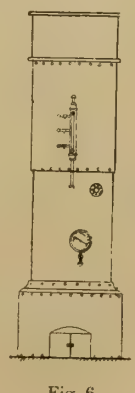

Fig. 6

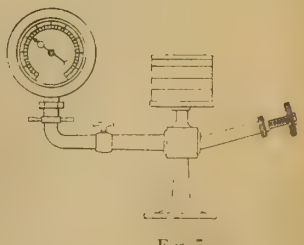

Fig. 7

Of course the ruling gives less available pressure for a vertical than for a horizontal boiler, and the difference is enough in many cases to seriously affect the engines using steam, but it keeps

one on the safe side, which is a very important point.

Although a steam gauge may be correct when new, it does not necessarily follow that it will remain so, therefore every gauge should be tested at least once a year. This does not mean that in a plant where a score or more are in use, each one should be disconnected and tested separately, as that plan would make much unnecessary work. If a certain gauge is tested each year, and all others indicate similar pressure, where they are connected in the same way, no further proof of their accuracy is needed. Where they are connected in different ways and indicate different pressures, if they maintain the same difference towards the one tested, it shows that no change has taken place in them, and this is sufficient proof of their condition.

Fib. 7 illustrates an instrument for testing gauges. The body is partly filled with oil and a small plunger inserted. This carries with it a circular platform upon which the desired number of weights are placed. Five are shown in the illustration, the three bottom ones indicate 20 pounds each, the next indicates 10, and the top one 5 pounds' pressure to the square inch; consequently, when the adjusting handle is screwed inward, so as to just float the tightly-fitting plunger in the oil, the pointer will indicate 75 pounds if all parts are properly adjusted.—American Electrician.

MEMBERSHIP IN ASSOCIATION.

MR. R. M. STARBUCK, Hartford, Conn., delivered an interesting address at the recent plumbers' convention in that state. He said:

In the business world, among business men, the first and all-important question asked before making an investment is, "Will it pay?" In viewing this matter we must not confine ourselves to merchandise or stocks that we are buying and selling. There are certain auxiliary matters that enter into business that work indirectly, yet have a direct bearing in conducting business, and while there are many such items that might be considered to advantage, for the present we will confine ourselves to a single one—the advantage of union in the respective lines of trade.

As plumbers, let us confine ourselves to our branch of trade in particular. In a competitive line of business it is difficult to overcome that insatiable thirst to down the other fellow, and so strong does this desire become that if we had on hand ten times the amount of work that it is possible for us to execute there would still be that spirit swelling up within us to jump on the other fellow whenever he showed his head above water. Would it not be well for us as men to drop this idea and question ourselves regarding the credit or pleasure in the cultivation of such a trait? Is there not enough for all of us at good, living prices? What better way is there to gain this object, or, in fact, what other way is possible, than by coming together as brothers and discussing the subject, and after having decided upon a line of action that shall be a credit to our trade and to ourselves be loyal to such line of action and to our organization? Without loyalty the whole fabric is rotten. If we by nature are so depraved and so low down in the scale of character that we cannot be honest

"Only the best is good enough."

Satisfaction comes only from the use of good goods.

Quality brings in trade and builds up business. A satisfied customer is the best advertising you can get.

One of our customers wrote us recently :

with our own we had better remain outside the organization until such time as nature with her wonderful developing power casts its influence over our poor, degenerate souls and brings them up to the standard of a man.

I repeat that there is enough for all of us at a fair living profit without robbing our customers or building ourselves up at the expense of our neighbors in business. On some points I differ from some of our members as regards the building of the foundations for our organization to rest upon, but this does no harm, for it is from this variety of opinion that the rational and thinking body of an association like ours can shape its course. I believe first of all in considering our association as a business proposition and nothing else. Do your eating at home or at least at some place where food is sold, and when you meet in the association rooms attend strictly to business.

I believe in building up the treasury, even at the sacrifice of pleasure, until it assumes such proportions than no one can afford to withdraw. I believe in levying a small tax on every job that is done, so small that it will not be a burden to the member or a stab at his customer, and I also believe that when our treasury holds a certain amount an investment committee should be appointed to see that the treasury continues to grow independent of contributions from the members. Every one of our associations can remember a time when it had money in the treasury. Where is it now? What lasting good has come of it?

VARNISHING THE BATHTUB.

THEY had just set up housekeeping and were working on the plan of economy. The bathtub needed a coat of varnish. He promised to attend to it if she would order the varnish.

"You'll find the varnish in the closet with the groceries, dear," she said a day or so later, "and the can-opener in the knife-drawer."

He opened the can, and, according to his contract, applied the coat of varnish and then left it to dry.

The soup for dinner that day had to be abandoned, for, somehow, it possessed a peculiar paint-shop odor that was nauseating. After dinner he took her to inspect his work on the bathtub. Now that it had dried, it had a certain unnatural appearance. The top and sides were streaked, and here and there little lumps clung to it.

"The man said that was the best varnish," she explained, taking up the can of varnish for an examination, "but—why, dear, you have varnished the bathtub with the ox-tail soup."

"Then it was the varnish we ate, dear," he added, horror-stricken.

HEATING CONTRACTS.

Smith & Fergusson, Regina, who are agents for the Pease-Waldon Co., Winnipeg, have recently installed in St. Mary's Church, Regina, a Pease Economy steam heater and ventilator. Samuel Hooper, of Winnipeg, is the architect who designed the building.

The Moose Jaw Hardware Co. have recently obtained the contract to instal in the Moose Jaw Public School a Pease Economy steam heater and ventilator, together with modern sanitary closet arrangements. The contract was secured after very keen competition.

HOW TO CLEAN BRASS.

The United States Government is said to have sanctioned the following method of cleaning brass: Make a mixture of one part common nitric acid and one-half part sulphuric acid in a stone jar, having also a pail of fresh water and a box of sawdust. Dip the articles into the acid, and then soak them in the water and finally rub them in the sawdust and they will take on a brilliant color. If the brass is greasy, it must be first dipped into a strong solution of potash and soda in water, and then rinsed, so that the grease may be removed, leaving the acid free to act.

TIT FOR TAT.

A plumber who was sent to the house of a wealthy stock broker to make repairs, was taken by the butler into the dining room, and was beginning his work when the lady of the house entered.

"John," said she, with a suspicious glance towards the plumber, "remove the silver from the sideboard at once and lock it up."

But the man of lead was in nowise disconcerted. "Tom," said he to his assistant, who accompanied him, "take my watch and chain and these few coppers home to my missus at once."

IDEAL
Woven Wire Fencing

MAKES MONEY FOR YOU

Your customer, the farmer, wants a fence that can be put up quickly and easily just when he wants it. Hand made fences cost too much when you figure the time it takes to build them, to say nothing of the hard work.

Why not sell "The Ideal," the best woven wire fence made? You can build up a permanent trade that will pay you as much as any line you are handling. Other hardware merchants are doing it. Why not you? The Ideal will give satisfaction to your customer and make him your friend.

Have you seen the Ideal? Let us send you a sample and catalogue showing why Ideal fence made from No. 9 hard steel wire throughout is the strongest and the best value.

Ask us about the Ideal all metal farm gate.

OTTAWA PLUMBERS ON STRIKE.

A press despatch says: Members of the Plumbers' Union, Ottawa, have gone out on strike. They number about 75, and are asking for 30 cents per hour for a nine-hour-day and Saturday afternoons off without pay. The employers, who number about a dozen, are offering 28½ cents per hour, which is about a cent an hour above the highest pay that was being given. The employers also refused to concede the Saturday half-holiday.

Two shops are not affected by the strike. Knox Bros., Bank street, and D. Belleau, Dalhousie street, have signed an agreement for a nine-hour day, no work Saturday afternoons, and 30 cents an hour. They together employ about ten men. It is possible that the strike will last some time, as work is not greatly rushed in the holiday season, and there are only a few big jobs, such as the Ottawa University, that require immediate attention in order to give the finishers and decorators an opportunity of completing their work.

PLUMBING GOSSIP.

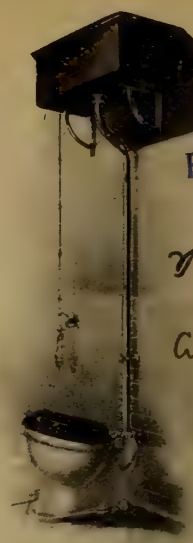
Mr. Atchison, of Atchison Bros., plumbers, Stouffville, visited Toronto this week.

* * *

Andrew Mann, manager of the Canada Brass and Supply Co., London, spent a few days in Toronto this week. The company have been reorganized recently and are now backed by one of the wealthiest and most successful men in London.

* * *

Mr. R. J. Morris, of the Central Supply Association, spent Tuesday and Wednesday in Detroit. Messrs. Charles Morrison, of the James Morrison Co., and C. F. Somerville, of the Ontario Lead and Wire Co., also spent a couple of days in the City of the Straits, the occasion being the gathering of the representatives of American and Canadian plumbing supply men to confer over trade matters.



* * *

The Canada Brass and Supply Co., London, will not build a warehouse on York street, Toronto, but have opened up a branch warehouse at 149 King street west, near the Iroquois Hotel. Mr. R. W. Crashley, formerly with the James Robertson Co., is in charge of the branch and, as a full line of plumbing supplies will be carried, Mr. Crashley's long experience and connection with the trade should aid him in developing a good business for his company.

The Standard Plumbing & Heating Co. has been organized in Winnipeg, with a capitalization of $60,000. T. A. Irvine, J. Mould, J. Turner, A. F. Irvine and H. W. Hollis, are the incorporators.

JOINED THE BENEDICTS.

One of the most popular of Lewis Bros. Co.'s travelers, Mr. B. S. Saunders, was married on Wednesday, June 28, to Miss L. Edna Gerald, of Prescott. The wedding took place at the bride's family residence in Prescott and Mr. and Mrs. Saunders were the recipients of many handsome gifts. They will reside in Brockville when they return from their wedding trip.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 30, 1905.

THE strike among carpenters has had a slightly blighting effect upon the local trade, but it appears to have stimulated the plumbers, because in many cases buildings are sufficiently advanced that plumbers are able to go right ahead. All over the city plumbers are very active, and supplies are selling rapidly and for good prices. Heating apparatus is also selling well, and large firms like the Thomas Robertson Co., for instance, report an unusual activity for the time of year. Plenty of orders are coming in all the time, and building trades are all alive. The strikers will no doubt look for sympathy from the plumbers, but it is generally conceded that no strike is probable with the plumbers.

Range Boilers—No change. We quote: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—No change in pipe. Trade is good and promises to continue. We quote as follows: Discount 30 and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra.; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—Steady prices hold and the trade is sound and natural. We quote as follows: Discount on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—Manufacturers are still busy, and are likely to remain so. Trade is brisk and prices remain unchanged. Our quotations are as follows: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 1-2 per cent.; 3-8 inch, 62 1-2 per cent.; 1-2 inch, 72 1-2 per cent.; 3-4 inch, and upwards, 74 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 62 per cent.; 3-4 inch and upwards, 64 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30,00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanised, 61 per cent.

Soil Pipe and Fittings—No actual change has taken place in quotations, although during the week prices went up and down and then resumed normal state. We quote as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list. Medium and extra heavy soil pipe 60 per cent. off. Fittings 60 per cent. off.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, June 30, 1905.

REVISED price lists are not yet completed, although it is expected that the supply men will have completed their readjustment during the next few days. It is understood that, in addition to brass and copper goods, on which closer quotations will be made, iron pipe fittings will also be shaded somewhat.

Very satisfactory business is reported

An English Plumbing Job.

by jobbers, some exceptionally large shipments being made by eastern supply houses to British Columbia and Manitoba houses. Buying is active in both city and country districts, and orders for roughing in material usually include the finishing supplies as well.

Lead Pipe—Buying is very active, with prices the same. We quote as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 30 and 5 per cent.

Soil Pipe and Fittings—Purchases are large, and prices steady, with no change probable. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—The demand is strong. Prices are firm, but lower discounts are expected. Our quotations are still as follows: Malleable fittings 20 to 25 per cent. for American and 35 per cent. for Canadian; cast iron (standard), bushings, 65 per cent.; headers, 60 per cent.; flanged, unions, 60 per cent.; lipped unions, 60 and 5 per cent.; malleable bushings, 60 per cent.; nipples up to 6 inch inclusive, 75 per cent.

Copper Range Boilers—No change is noted, demand continuing active. The discount of 15 per cent. continues.

Galvanized Iron Range Boilers—The volume of business being done is considered very satisfactory. Prices are the same. Our quotations are as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallons, standard, $6; extra heavy $8.50; 40 gallons, standard, $7; extra heavy, $9.50; 52 gallons, standard, $11; extra heavy, $14; 66 gallons, standard, $18; extra heavy, $20; 82 gallons, standard, $21; extra heavy, $24; 100 gallons, standard, $29; extra heavy, $34; 120 gallons, standard, $34; extra heavy, $40; 144 gallons, standard, $47; extra heavy, $55.

Iron Pipe—Market conditions are very similar to last week. Buying is active at steady prices. Demand continues active. We still quote: Black, 1-4 inch, $2.03; 3-8 inch, $2.06; 1-2 inch, $2.29; 3-4 inch, $2.87; 1 inch, $4.12; 1 1-4 inch, $5.62; 1 1-2 inch, $6.75; 2 inch, $9. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.14; 3-4 inch, $4.02; 1 inch, $5.77; 1 1-4 inch, $7.87; 1 1-2 inch, $9.45; 2 inch, $12.60.

Solder—Large quantities are being used on contract work, and buying is active. We quote: Bar solder, half and half, guaranteed, 18c.; wiping solder at 16 1-2 to 17c., and refined 17c.

Enameled Ware—Heavy buying is reported in both city and country. The expected advance has not yet materialized. We quote: Baths, rolled rim, 5 feet, 2 1-2 inch rim, 1st quality, $17.50, special, $15.50; 3 inch rim, 1st quality, $19.00, special, $17.00; 5 1-2 feet, 2 1-2 inch rim, 1st quality, $19.00, special, $17.00; 3 inch rim, 1st quality, $20.50, special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.45; special, $2.

AN ENGLISH PLUMBING JOB.

The accompanying illustration shows a sample of lead soil pipe work as executed at a country seat in Surrey, England, which will probably be of interest to Canadian plumbers who have not been across the water and seen similar work themselves.

The photo was supplied Hardware and Metal by Mr. F. Dare, 100 Mutual street, Toronto. Other plumbers who have photos of jobs performed by them will confer a favor on us by sending them to Hardware and Metal for reproduction and criticism by members of the trade in Canada. Criticism of the job illustrated is invited.

THE OXFORD BOILER

Nothing in the way of Heating Apparatus for modern homes has ever equalled The Oxford Hot Water Boiler, ("B" Series.)

Its constructional detail is scientifically perfect and results in a greater utilization of a given amount of generated heat and a lesser waste of it up the chimney than any other boiler made.

The walls of the firepot slope inward above the fire and the heat impinges thereon in its upward course with consequent absorption, utilization and fuel economy. The same action ensues as the heat strikes the first water section which is deeper than the others and provided with bell shaped flues to secure maximum heating surface.

All sections are joined by tapered steel push Nipples which do away with the use of rubber gaskets or packing of any kind. This makes a "metal to metal" unleakable joint.

Our hollow grate bar provides for ample draft and complete or partial removal of ashes.

We would like to send you our free Catalogue giving full details of the Gurney Oxford Steam and Hot Water Heating Apparatus.

WESTERN HARDWARE CONVENTION.

IT has been decided by the executive of the Western Retail Hardware and Stove Dealers' Association to call a general convention, to meet in Winnipeg, during the Exhibition. Scott Memorial Hall has been secured again, this time for two full days, July 26 and 27, and ample opportunity will be given for a full and free discussion of association matters. The first meeting is called for nine o'clock on the morning of July 26, and, if necessary, meetings can be held morning, afternoon and evening, for two days. The convention last February was conducted too hurriedly—by the time all the ice was thawed and the different members were beginning to talk freely of those grievances which lay closest to their bosoms, the hour of closing had arrived. This time there will be ample opportunity for a thorough discussion, and it is the earnest hope of the executive that merchants will come prepared to unburden themselves of all grievances. That is the purpose of the convention.

It is satisfactory to be able to state that substantial progress has been made since the convention last St. Valentine's day. Shortly afterwards the executive appointed Mr. J. E. McRobie as secretary and organizer. The months that have intervened have proved the wisdom of their choice. The new secretary is well acquainted among the western trade, and he has proved a tower of strength to the ambitious young association.

In the last four months Mr. McRobie has covered the greater part of Manitoba, calling personally upon all the hardware men in every town. So far only four hardware men have refused to join the association, a showing which is very encouraging. The secretary has not yet found time to visit the trade in the Territories, but they will be called upon in due course, and no fears are entertained but that they will prove themselves equally alive to the benefits of a strong retail association.

The value of the association has been tested already in several instances, and the secretary has been able to straighten out several nasty little tangles simply by bringing the members of the trade together. There are many matters which require attention and the help of the association as a body to settle. The convention is called for the discussion of such questions, and the executive are anxious that all western hardware men will avail themselves of this opportunity.

CANADIAN IRON BOUNTIES.

IT appears that the iron industry of Nova Scotia is depressed because of the increasing use of foreign ore in this country under the present tariff and system of bounties. The Halifax Chronical sets forth the grievance of mine owners, that the fiscal system of the Dominion places them at a serious disadvantage. Iron ores are on the free list, and foreign ores are driving native ores out of use.

Prior to 1896 iron bounties were granted in a way to support and develop the iron mining industry of Canada. Two dollars a ton was paid on all pig iron made in Canada from native ore; two dollars per ton on all iron puddled bars made in Canada from Canadian pig iron manufactured from Canadian ore, and two dollars per ton on all steel billets made in Canada from pig iron made from Canadian ore, and such other ingredients as necessary and usual; no payment to be made with respect to foreign ores used in the products mentioned. The bounties were exclusively limited to Canadian products.

The present Government, however, has increased the bounty tax, while cutting down the bounty benefit to the iron mines. Three dollars is now paid in bounty on steel ingots made with fifty per cent. of pig iron made in Canada. On pig iron a bounty of three dollars is paid on the proportion produced from Canadian ore and two dollars per ton on the proportion produced from foreign ore.

The bounty on foreign ore is not as large as on the home article, but the difference is so slight that no appreciable advantage is afforded the Nova Scotia mines. Another great change introduced in the legislation of 1897 was that it placed no limitation as to Canadian ores in the bounties payable on puddled bars and steel billets. There may not be a pound of Nova Scotia ore or other Canadian ore entering into the iron used in those bars or billets, yet every ton of them is entitled to a $3 bounty. The result of the policy has been to reduce the production of iron ore in Nova Scotia from 58,810 tons in 1896 to 16,172 tons in 1902.

Government statistics throw another light on the manner in which the iron mining industry of Nova Scotia has been sacrificed to the foreigner. In 1903 the Dominion Iron and Steel Co. used no Canadian ore, but 205,540 tons of foreign, on which bounties of $136,875 were paid. The Nova Scotia Steel and Iron Co. used 4,653 tons of Canadian ores, and 15,395 of foreign ores, on which $40,276 was paid in bounties. Of the $412,000 of bounties on pig iron alone, less than one thirtieth part was paid in respect of iron from Nova Scotia ores; while as to the bounties paid on puddled bars and steel ingots, the new laws give Nova Scotia ores no advantage whatever.

THE TURPENTINE CORNER.

REPORTS from the south are to the effect that the recent corner in turpentine was not a temporary condition, but is apt to re-assert itself again and have its effect on the market all season, the general result being continued high prices. A feature of the event is the increased use of benzine as a substitute, and of efforts being made in all parts of the world to procure an article which will take the place of southern "turp." British Columbia, Russia and India are the scenes of various experiments, and it is possible that some success may crown some of the efforts, although as yet the real article has not been equalled by any substitute.

During the past six months an organization known as the Producers' Export Co., with offices at Savannah, Jacksonville and Mississippi ports, have been making an endeavor to corner the supply, which has had a tendency to make the market bullish. In order to offset the action of the Savannah men, another dealer has sent out men, not only to buy up the supply, if possible, but failing in this, to buy turpentine farms, a drastic measure, but a decidedly successful one, if accomplished. The railroads also have been brought into the case, and a big contract was closed recently with the Atlantic Coast Railway, whereby that road will deliver special

trainloads of the spirits of turpentine from Savannah to Jacksonville.

With these endeavors to corner the market there are, of course, others who are determined to balk the plans of the syndicate. Several firms have attempted to place upon the market "doctored" spirits, but have been caught in the act. Then another firm in Georgia claims that it has delved a secret from nature whereby it can make from pine knots and refuse lumber a product that smells and looks like spirits of turpentine and which may be the means of causing a break in the corner now threatened. Experts who have seen the product declare it to be an excellent imitation of the real article of trade. The war will be waged as strongly as possible, and plants for the making of this new product will be installed throughout the turpentine belt of the southeast.

DOMINION EXHIBITION AT HALIFAX.

EXHIBITIONS have much to do with the commercial development of growing cities, not only in the newer districts, but also in well-settled and conservative sections. Toronto has gained greatly through the fame won by its annual Industrial Exposition and many manufacturers and business men have been attracted to the city by the advertising done by the Fair Board.

The holding of an annual Dominion Exhibition in the various commercial centres is a progressive step which has already proven successful. Winnipeg used the exhibition last year to good advantage, and it is probable that many of the firms who exhibited there last year have since opened branch factories or warehouses in the Prairie City. And New Westminster is this year preparing to have its Dominion Exhibition prove to be an attraction second only on the Pacific Coast to the Lewis & Clark Exposition at Portland, Oregon. Its situation in the Fraser River Valley and near the islands of the Delta, makes it an ideal location to make an exhibit of fruits, grains and live stock which should astonish all visitors to the British Columbia city.

The announcement that Halifax has secured the Dominion Exhibition for 1906 should be good news to all who have interests at stake in the Maritime Provinces. Every merchant should cooperate with the Halifax association in advertising the event and inducing manufacturers from other provinces and states to make exhibits, as well as in encouraging growers of agricultural products and live stock, and manufacturers of staple articles to join in making the Halifax Exhibition a success. It is not too soon to take up the matter now and lay plans as to how best to make the 1906 exhibition a success. The Maritime Provinces have much to gain by adopting an enterprising advertising campaign so that the growing west will not receive all the attention of those who have to do with the commercial development of Canada.

WESTERN CROP REPORTS.

CROP reports compiled in Western Canada by the railway officials continue most optimistic in tone. Not in several years have conditions been so favorable at the end of June, and there is every reason to expect a "bumper crop." Perhaps it is only natural that when all conditions seem favorable there should be some exaggerations in the reports received. No doubt many of the early predictions as to the size of the crop will look foolish when the wheat has all been marketed and reliable statistics are available; but, nevertheless, unless some disaster overtakes it, this season's crop will be a vaster crop than has been.

It would be foolish, however, for the trade to risk too much upon the size of the season's crop. A big harvest means a large amount of money for the western farmer and an added impetus to all branches of trade. Hence there is a strong temptation to overload with stock in many lines in anticipation of a big demand in the Fall. But this is a temptation to be avoided. A partial failure of the crop in any district would mean trouble for any store that had overstocked, and there is always danger of rust in some sections. The burden of credit is too heavy now, and nothing should be done to increase it. It is satisfactory to note that crop prospects are excellent, but it is the part of folly to discount the future. Go slow.

WINNIPEG'S CENSUS.

WINNIPEG citizens profess keen disappointment at the result of the special census which the city council ordered to be taken. According to the census man the population of Winnipeg proper is 78,367, and including the suburbs of St. Boniface, Norwood and Louise Bridge, which are really a part of the city, the total population is 85,829.

Had not the people of Winnipeg been led astray by the sanguine calculations of real estate agents, whose interest it is to exaggerate the growth of the city, there would be general satisfaction and no disappointment with the result announced. But people have become accustomed to hearing calculations ranging from 90,000 to 115,000, and hence the actual figures come as a surprise to many.

Nevertheless, these figures indicate a steady, satisfactory growth. In the census report of 1891, Winnipeg is credited with a population of 24,068; in 1901 this had increased to 44,778, and a jump to 78,367 in four years should not be thought unsatisfactory. Surely it is an indication of a rapid and steady growth.

While Winnipeg continues only a distributing centre, dependent for almost all its manufactures on outside points, there are limits to its growth. If the power problem can be solved and Winnipeg can manufacture as well as distribute, her growth will be much more rapid than it has been even in the last four or five years. Cheap power from the Winnipeg River seems likely to be secured very soon, and in that case many eastern manufacturers will establish branch plants in Winnipeg to supply the western demand. In the meantime there is every reason to be satisfied with the substantial, steady growth of Manitoba's capital city.

A GOOD CUSTOMER.

A RECENT issue of Bradstreet's contains some interesting statistics which would seem to indicate that the special tariff advantages in favor of Great Britain, as opposed to the United States, have failed to offset the effects of contiguity and the popularity of American goods in Canada. The present fiscal year promises to break all records in the volume of American-Canadian trade. U. S. Government returns show that for ten months ending April, 1905, Canada took American products to the extent of $115,000,000, and the prospect is that by the end of June the total will reach $140,000,000. The value of imports from the United States for the preceding year was $131,274,346 —up to that time a record breaker in the history of United States trade with Canada.

The gains made by American producers in supplying the requirements of the Canadian market may be illustrated by the following figures, compiled from the Dominion Trade and Navigation Returns :

(Three figures omitted.)

Imports from—	1890.	p.c.	1897.	p.c.	1904.	p.c.
United States	$52,291	46.4	$61,649	55.4	$150,826	60.0
United Kingdom	43,390	38.5	29,412	26.4	61 777	24.5
Other countries	17.085	15.1	20,232	18.2	38,860	15.5

Canada, it will be seen, took 60 per cent. of its imports from the United States in 1904, as against 24.5 per cent. from the United Kingdom, and 15.5 per cent. from other countries—a growth indicating a trebling of takings of American goods, with less than a doubling of the values of British goods. During

the period from 1855 to 1866 a reciprocity treaty was in operation between the United States and Canada; from 1867 to 1897 commerce between the two countries was unaffected by special trade arrangements; from April, 1897 to August, 1898, products from the United Kingdom entered the Dominion at a reduction of 12½ per cent., as compared with the duties charged on importations from the United States. On August 1, 1898, this reduction in favor of the United Kingdom was increased to 25 per cent., and on July 1, 1900, was still further increased to 33 1-3 per cent. One-sixth of the Canadian takings in the present fiscal year were of coal, while raw cotton, steel rails, corn, lumber, and canned goods, were other important imports.

Exports from Canada to the United States have likewise grown, but at a much slower pace. This year they will reach $57,000,000, as against $51,406,265 for the fiscal year ending June 30, 1904. Canadian exports in 1890, 1897 and 1904, were distributed among the different countries as follows:

(Three figures omitted.)

Exports to—	1890.	p.c.	1897.	p.c.	1904.	p.c.
United States	$40,522	41 9	$49,373	55.8	$ 72,772	34 1
United Kingdom	48,353	49.9	77,277	55.9	117,591	55.8
Other countries	7,872	8 2	11.349	8 3	23.156	10.1

NEED OF THE MAIL ORDER.

THE growing tendency among retailers to use the mail order does not lessen the necessity for traveling salesmen, says the Hardware Trade. It is simply a new condition to which the salesman and the wholesaler must adapt themselves.

Conditions in retailing in most sections of the country are such that the retailer cannot hold his order for the salesman as he did in days gone by. He needs the goods right away and he cannot afford to invest in an extra big order simply to make sure that he will have stock enough until the salesman comes again.

Every progressive wholesale house is recognizing this by improving the facilities of its mail order department and for the prompt shipment of goods. The retailer who holds his investment in stock down and uses the mail order is working on right lines. The progressive traveling salesman freely acknowledges this. The traveling salesman who combats it is in nine cases out of ten the man whose best record is behind him.

REGARDING COMPLAINTS.

WE are anxious that our subscribers as far as possible should receive copies of Hardware and Metal on Saturday. The paper is mailed every Friday and all subscribers between Windsor, Ont., and Quebec City, and as far north as North Bay, should receive their paper on Saturday.

We would like any of our subscribers in this district who do not receive their paper till Monday to enter a formal complaint with the postal authorities. We do this ourselves when we find the paper has not been received, but our case would be much stronger if our subscribers would take the trouble to write the deputy postmaster at Ottawa.

DECLINE OF NOVA SCOTIA'S IRON MINES

PROBABLY some of our readers remember that Canada inaugurated the North American iron ore mining industry in 1737, and that the first blast furnace in America was built in Canada during the same year, says the Halifax Chronicle. This furnace and the iron mines that fed it remained in almost continuous operation until 1883, and were succeeded in 1891 by a newer furnace, which is still in operation.

Canada's iron manufacturing industry is therefore now fully 167 years old, and in urging the Federal Government to remove a weakness still inherent in it, by stimulating the production of native ores for its support, Nova Scotians aim at the welfare of a Canadian industry older than the British regime in this Dominion.

The extraordinary dependence of this primary industry on foreign ores, 167 years after its foundation, is thoroughly disappointing when we remember that it is coeval with iron mining in Canada, and that the two closely allied industries were expected to make, at least, equal progress.

That these expectations have not been realized is, we think, due to our failure to equally support them. Let us summarize Canada's iron policy to date. Since 1884 we have paid $5,000,000 in cash to the iron manufacturers to encourage them to make iron, etc., but nothing at all to iron miners to encourage the output of native ores. We have protected the iron manufacturers from foreign competition, and left the iron miner exposed to it. Briefly, we have given everything to the iron manufacturer, including even the right to import duty free foreign ores, rivals of our own, and we have left our iron mines to shift for themselves. Or, to put it even more briefly, to date we have nursed our iron and steel industries and neglected our iron mines.

The mining of iron ores is a more arduous operation than the smelting of those ores, and it is decidedly impolitic to leave the most difficult of the two industries without the slightest direct aid, and exposed to the competition of rival foreign ores. Moreover, it is contrary to the principles of our fiscal system.

The disproportionate progress of iron mining and iron manufacturing in Canada need not excite surprise, when the disproportionate support extended to them by the state, since 1884, is weighed. To expect iron mines to become highly productive under the fiscal conditions that now prevail in this country is to ask too much, and to regard their enforced inactivity as indicative of a lack of native ores, as some of our foreign rivals do, is in the highest degree unreasonable. What inducement is there to invest capital in Nova Scotia iron mines and make them more productive, while foreign ores pour into their home markets and some assistance calculated to offset this serious handicap is withheld by the state? Little or none. We are convinced that our iron lands will continue to lie dormant until the national policy toward iron mining is altered. Until this is done, the present subsidies to our iron and steel industries will stimulate foreign ore mines that embarrass our own, and the capital invested in some of our most important iron industries will remain exposed to legislative interference by the foreign executives that control distant ore deposits.

To regard these important local iron enterprises as national industries, like our coal mines, while they remain upon their present basis appears to us self-deception and, if the celebrated United States iron master who recently criticized them, had in mind their extraordinary dependence on foreign ore, his criticisms were not wholly unreasonable.

Fortunately, the power to put an end to all this and place our ore industries on a sounder basis is in our own hands. The iron and steel industries, that we have created at a direct cost of $5,000,000 in bounties provide the increasing demand for iron ores that we have long desired, and this is probably the best return we have got for our large expenditures, for it is obvious that there are legitimate methods by which we can use this large domestic demand for iron ore to stimulate the development of our iron and steel corporations to consume native ores until iron mining and iron manufacturing in Canada are once more interdependent on each other, as they originally were in 1737.

After attentively considering the industrial situation, we are of the opinion that further iron and steel legislation should be deferred until the Federal Government decides how best to do this, and we think it may be advisable to refer the whole matter to the proposed tariff commission for equitable arrangement. We are decidedly opposed to further "iron legislation" unless it adequately encourages iron ore mining in this country.

Curiously enough, some of those in accord with us take rather seriously the "fears" of our foreign rivals that our iron lands may not be capable of supporting large iron and steel industries. They suggest that perhaps we should prove the existence of native iron ores before we adopt a broader policy for their development. Without pausing to explain in too much detail, the truism that the adoption of an adequate policy for the encouragement of iron ore mining would be the best of all methods for settling once and for all whether we have any, if doubts as to its prevalence existed, we may say that Nova Scotia contains abundance of iron ore, including one deposit which is probably among the most extensive on the coast of America. This abundance of native ore was long since explained by competent authorities, and has been demonstrated by our miners and prospectors. Moreover, nothing can be clearer than the fact that the decline of iron mining in this favored province is not due to the failure of the main ore beds, which, it is significant to note, are not yet owned by our ore consuming companies. But the iron policy we advocate, although superfluous, would not cost Canada anything, if she had not any ores. Before any sums of money are paid to our iron miners they will have to produce the iron ore, and the iron miner who fails to do so will not get public assistance.

We can see no objection to Canada adopting a policy for the further encouragement of iron mining, on such terms, and cannot imagine any quarter from which opposition to it would reasonably come. There is, on the contrary, every reason why we should adopt such a far-seeing policy, if for no other than that the lamentable decline of iron mining in this important province will thereby be arrested.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 58.)

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, June 30, 1905.

GENERAL business is described as good for the time of year. Quite a number of travelers are taking their holidays just now, yet orders are frequent, and plenty of stock is moving. The building trade and its accessories has been affected by the carpenters' strike, which is now in force in the city. It is reported, however, that many of the buildings are so far advanced that the plumbers are able to do their work. The lull in horse nails and shoes has set in, and it is not expected that these lines will awaken much before the Autumn. In the big warerooms of wholesale houses the shippers are very busy sending out ammunition to all parts of the Dominion.

Immense quantities of sporting goods of all kinds are disposed of also. In accordance with the season, apple parers are in extra demand, and garden tools, etc., are firm and in good demand. It is interesting news in the middle of Summer that snow shovels are going to be dearer by five per cent. This is said to be occasioned by the scarcity of wood from which they are made. One dealer stated that he expected all kinds of wooden tools to advance in price shortly.

Sleigh shoe bolts have been reduced and are now being sold from the carriage bolt lists. Barb wire and staples are moving freely. Screws and rivets are quiet and firm. Cut nails and wire are going slowly, while in building paper and binder twine there has been a boom and it is likely to continue.

Axes—Good business is being done by leading firms, and the market is in a very healthy condition. No change in price. Our quotations are as follows: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—Steady demand has kept up and supplies are abundant. We quote as follows: Axe handles, No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No 3, $1.50 a dozen.

Sewing Machines — Considerable activity has been noted in the trade, and there is a steadily increasing sale of first-class sewing machines. Our quotations are as follows: Hand sewing machines, $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns—Good business is being done and the trade is active. First-class lanterns are in stronger demand than they were last year at this time. Large numbers of lanterns are used at Summer homes now and even at the seaside places. We quote: Cold Blast, $4.50; No. 0 Safety, $3.50.

Barb Wire—Moving freely is the word all over, and as this is the season for fencing excellent sales are reported. Our quotations are as follows: $2.75 for 100 lbs. f. o. b. Montreal: $2.37 1-2 f.o.b. Cleveland. Carlots of 15 tons, $2.25 f.o.b. Cleveland.

Fence Staples—Moderate activity has shown itself, and demand, of course, is measured by the barb wire sales. We quote as follows: $2.65 per 100 lbs. keg, for bright, and $3 for galvanized; 25 to 50-lb. packages 25c. extra.

Rivets and Burrs—Prices are unchanged, but business is active and steadiness rules. We quote as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. cartoon boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—Trade is quiet and firm. It is said that now is a good time to buy screws, as the prices may advance. Our quotations are as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—Sleigh shoe bolts are reduced in price and are being sold from the carriage bolt list subject to the following discounts: Three-eighths and smaller, 60 to 10; seven-sixteenths and larger, 55 to 5. Activity rules.

Wire Nails — Demand has eased slightly, and a quieter tone has been noticed this week. We quote: $2.25 a keg f.o.b. Montreal.

Horseshoes—Very little business is being done, and it is confidently expected that little improvement may be seen for some months. Our quotations are ats follows: P.B. New Pattern, base price, $3.50 per 100 lbs.; M.R.M. Company latest improved pattern iron shoes, light and medium pattern No. 2 and larger $3.65. No. 1 and smaller $3.90, snow pattern, No. 2 and larger $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller $4.15; featherweight, all sizes 0 to 4, $5.50; toe weight, all sizes 1 to 4. $6.75. Packing—Up to three sizes in a keg ten cents per hundred pounds. More than three sizes twenty-five cents.

Horse Nails—Prices are the same with a fairly steady trade.

Sporting Goods—Some record sales of ammunition and shooting materials have been made lately, and piles of boxes are being shipped. Fishing tackle is also booming, and all the accessories to outdoor games, etc., are selling freely. We quote as follows: Canadian-made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—It is expected that the carpenters' strike which is on in the city may have a bad effect on the building paper trade, but so far it has not been disturbed at all. Demand is increasing all the time, and it is likely that all kinds will sell freely for some months. Building activity is at its height.

Cordage—This is the season for twine, and as the harvest approaches the increased demand will continue. Manufacturers are very busy, and orders are booked ahead for some time.

Cement and Firebrick—The fall in prices has held out, and business is not so active. An advance is expected any day. We quote: English cement, $1.80 to $1.90; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2.00 to $2.10 ex-cars; Canadian Portland, $1.90 to $2.00. Firebrick, English and Scotch $17 to $21, American $30 to $35.

Coil Chain—Firm prices with steady business, somewhat easier than last week. We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, 3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Green Wire Cloth—Practically off the market for this season. It is selling at per hundred square feet $1.50.

Poultry Netting—Scarcity continues in some sizes, and the demand has increased with firm prices. Discounts for two inch nineteen gauge standard, and sixteen gauge extras, at 60 per cent.; finer meshes, 55 per cent.

Spring Hinges—In keeping with the boom in building, the trade has increased in volume, and there seems to be a heavy demand for high-class hinges. We quote as follows: No. 5, $7.25 per gross; No. 19, $18 per gross; No. 20, $18.80 per gross; No. 120, $20 per gross; No. 51, $9.25; No. 50, $27.50.

Apple Parers—Excellent business is reported all over for first-class practical

apple parers. The fruit season always causes stimulation in these lines. We quote: Little Star, $4.85; Hudson, $5; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, June 30, 1905.

CONTINUED activity is reported amongst the hardware jobbers, large assorting orders being received from the trade in all sections of the province. Trade in hay forks, rakes, scythes and other farm tools is particularly active, while garden and lawn accessories are still in strong demand.

Summer goods, such as fly screens and doors are being sold in large quantities, and fishing tackle, guns and ammunition are called for actively.

The practical immunity from strikes in the building trades in Ontario gives all building materials a boom, the result being that merchants' stocks are diminishing rapidly, and calls for more goods are becoming frequent.

The Association of American Portland Cement Manufacturers of the United States was in annual convention at Atlantic City last week. The gathering represented $50,000,000 capital and 30,000,000 barrels of cement per annum. The convention decided to raise prices five per cent. per month, owing to scarcity of stock. It was also voted to establish a laboratory for the study of methods for the manufacture of cement blocks and other material for building. The insurance companies were asked for a lower rate on concrete buildings.

No changes in prices are noted.

Lawn Mowers—Trade continues very active. The season is nearly over, however.

Sporting Goods—Fishing tackle and camping outfits are having a good sale, while shooting materials are improving.

Washing Machines—Demand continues very good for the Summer season.

Chain—Trade is in its normal state. We quote: 1-4 inch, $6.50; 5-16 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Step Ladders—A fair business is being done. We quote at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders.

Extension Ladders — Movement of goods is reported as very satisfactory. Waggoner, 40 per cent. off list.

Galvanized Wire—Large orders are still being placed with the jobbers. We quote: $2.37 1-2 f.o.b. Cleveland.

Poultry Netting—Demand for goods is exceptionally good.

Barb Wire — Many merchants have been cleaned out by the active demand, and repeat orders are common.

Wire Nails—Stocks are being called upon heavily. Nominal quotations are $2.25 f.o.b. Toronto.

Cut Nails—A large trade is reported. Prices are firm. Quotations are $2.40 per keg f.o.b. Toronto.

Horseshoes—Trade is falling off owing to the Summer season. We quote as follows: "P. B." base, $3.65; "M.R.M. Co., latest improved pattern" are: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horsenails—Demand during the Summer season is less active. Prices are the same.

Screws—Stocks are fairly large and demand good.

Rivets and Burrs—Demand is reported good at unchanged prices.

Bolts and Nuts—Stocks are being diminished slightly. The same quotations rule.

Cordage—Sorting-up orders are the rule, with some orders for binder twine still coming in. We quote as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30 to 32c.; "Star," 36 to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white 11 to 13c.

Cement—The large demand and possibility of a shortness in the supply causes prices to hold firm. We quote as follows: For carload orders f.o.b. Toronto, Canadian Portland, $1.85; American Portland, $1.85 to $1.90. For small orders ex warehouse: Canadian Portland, $2 to $2.10; American Portland, $2 to $2.10.

Firebrick—Business is expected to be more active this month. Prices are firm. Our quotations are as follows: English and Scotch firebrick, 27 to 30c.; American low-grade, 20 to 25c.; high-grade, 27 1-2 to 37 1-2c.

Building Paper—A large business is being done, the general activity in the building trades keeping the demand for goods steady.

Hides, Tallow, Skins and Wool—The market is quiet and without particular indications. Advances, however, are noted in country hides, flats, and lamb skins and shorn pelts, due to the fact that some buyers in the country are offering prices higher than city dealers can afford to pay or the export market will warrant. We quote the following:

Hides, No. 1 green steers, per lb		0 10
" " 2 " "		0 09
" No. 1 green, per lb		0 09½
" " 2 " "		0 08½
Country hides, flats, per lb	0 08½	0 08½
Calf skins, No. 1, selected		0 11
" " No. 2		0 09
Deacons (dairies), each		0 80
Sheep skins		1 25
Lamb skins, each		0 45
Shorn pelts "		0 35
Rendered tallow, per lb	0 04	0 04½
Unwashed wool, new clip, per lb		0 15
Wool-washed fleece		0 23
Pulled wools, super, per lb	0 21	C 23
" " extra "	0 22	0 24

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, June 30, 1905.

BUSINESS in metals generally is sound and healthy. Antimony has held firmly to the advance of last week, and there is not the slightest indication of any decline. Copper has firmed up, and a slight advance was reported. Ingot tin is very firm and steady, and although there were some fluctuations no change in current quotations was warranted. There is an easier market for ingot zinc, and prices are shaded for large quantities. Pig lead has advanced from $3.45 to $3.55, and has reached a price higher than it has been for the past three months. If pig iron follows suit then the prophecy of this paper will have been completely fulfilled.

Pig Iron—The expected advance has not yet taken effect, and some prominent wholesalers declare that there is not so much probability of an advance now. At any rate, prices are firm, and a good business holds everywhere. We quote:

"Disc," No. 1	$16.50	delivered	Montreal.
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18 00	delivered	Montreal.
" No. 2	17.50	"	"
" No. 3	16 50	"	"
" No. 4	16.00	"	"
Londonderry	$18.50 to $19.00	"	"
Glengarnock	18.25	"	"
Gartsherrie	19.25	"	"
Carnbroe	18.50	"	"
Carron No. 1	19.00	"	"
" (special)	18.00	"	"
Ayresome No. 1	18.25	"	"
" No. 3	17.50	"	"
Summerlee	18.50 to 19.00	"	"
Clarence No. 1	17.50	"	"
" No. 3	17.00	"	"
No. Cleveland	17.50	"	"

Bar Iron—Indications all point to a declining market, and there is every chance of the present decline being maintained for some time. We quote: Merchant bar, $1.80; horse-shoe iron, $2.02 1-2; forged iron, $2.05; best refined iron, $2.20 net cash thirty days.

Tool Steel—There has been a steady demand for tool steel, and certainly the large firms are busy selling fine varieties of tool steel. Free sales reflect on the development of industrial activity, and so tool steel is an unerring indicator of how prosperous the working people are. We quote: Colonial and Black Diamond, 8c to 9c; Sanderson's, 8c to 45c, according to grade; Jessop's, 13c; Jonas & Clover's, 10c to 20c; "Air Hardening," 65c per lb.; Conqueror, 7 1-2c; Conqueror High Speed steel, 60c.

Merchant Steel—The market is still quiet, and not much change is expected for a while. Our quotations are as follows: Sleigh shoes, $1.97 1-2; tire, $2.07 1-2; spring, $2.75; toecalk, $2.62 1-2; machinery iron finish, $2.10; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold-Rolled Shafting—Plenty of busi-

ness is being done, and prices are firm and steady with no change. Our quotations are as follows: Cold-rolled shafting, 3-4 inch to 17-16, $3.85 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Canada Plates—Increased demand has been noted, and first-rate prices are in force. Plenty of orders are available. We quote: 52's, $2.35; 60's, $2.40; 75's, $2.45; dull polished, $3.60; galvanized, 52's, $3.90 to $4; 60's, $4.15 to $4.25.

Galvanized Iron—No change has taken place in prices, and the market remains firm with every indication of maintaining that attitude. We quote as follows: Queen's Head, 28 gauge, $4.15; 26 gauge, $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 to 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c extra.

Black Sheets—Good trade is being carried on, and orders are plentiful. Our quotations are as follows: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—The remarkable advance has held firmly, and it is not likely to change, at least for some little time. Lively trade is being done, and there are some rumors of a further advance. We quote: 11 3-4 to 12c.

Sheet Zinc—No change has occurred in the price, but a steady market continues with fairly good business. We quote: Cask lots, $7; small lots, $7.25.

Tin Plates—Good demand and prices remain firm and unchanged. We quote: Cokes, $3.75; charcoal, $4.

Ingot Tin—Firmness dominates, and there is a strong tone to the market, with a tendency towards an advance. We quote: Present prices range from 33 to 33 1-2c.

Ingot Copper—Copper generally has grown much firmer, although no change has been made in the prices. We quote: 16 to 16 1-4c.

Ingot Zinc—An easier tone has been noted, and the current prices are shaded when large quantities are sold. We quote: 6 to 6 1-4c.

Pig Lead—An advance has taken place of from $3.45 to $3.55, and pig lead is thus higher than it has been for the past three months. We quote: $3.45 to $3.55. No concession.

Boiler Tubes—Business is good and prices are firm and unchanged. We quote as follows: British and American tube, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12 1-4; 3 1-2 inch, 16c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Scrap Metal—Considerable business is being done locally in copper and brass. These metals are in a strong position and are said to be likely to hold that. Our quotations are as follows: Heavy copper and wire, 12 3-4c.; light copper, 11 1-2c.; heavy red brass, 10 1-2c.; yellow brass, 8 3-4c. to 9c.; light brass, 6c.; lead, 2 1-2c.; zinc, 3 3-4c.; machinery cast scrap, $14; wrought scrap, $13; stove-plate scrap, $10; No. 1 country rags, 75c. to 90c. per hundred lbs.; old rubbers, 5 1-4 to 5 1-2c. per lb.

ONTARIO.

Office of HARDWARE AND METAL,
Front street east,
Toronto, June 30, 1905.

MORE confidence is evident in metals owing to the increasing firmness in demand and prices. All ingot metals are strong. Tin has advanced, and a rise is looked for in galvanized sheets. Copper is in a stronger condition, and lead is also in better shape. Spelter is not so strong. Antimony has jumped upwards again, and is reported firm at the higher quotations. Coal has been advanced 10c., according to schedule.

Pig Iron—Trade is more active, and large sales are reported. We still quote:

Middlesboro, f.o.b., Toronto	$20 00	$20 50
Hamilton, No. 1, at furnace	18 00	18 50
" No. 2, "	17 50	18 00
Midland, No. 1, "		18 50
" No. 2, "		18 00
Radnor, at furnace		30 00
Londonderry, at furnace	16 50 to	17 00

Bar Iron—Stocks are fairly large, and calls for goods are very satisfactory. Prices continue as follows: $1.85 f.o.b. Toronto, with discount of 2 per cent.; for extras as cut to length, while rolling, 2 feet and over, 10c. per 100 lbs., 1 foot and under 2 feet, 15c.; under 1 foot, 20c.; over 20 feet, by special agreement according to length and size.

Tin—Prices are advancing, and the light stocks held indicate no falling off. The demand is active. We quote: 34 to 35c. per lb.

Galvanized Sheets—Conditions are unchanged, the demand being heavy. Prices are advancing in England, but unchanged here.

Tin Plates—General activity is reported at steady prices.

Canada Plates—Active demand for goods is reported. Prices are the same.

Brass—Trade continues active and prices firm. Discounts are 10 per cent.

Lead—Increased prices are reported in outside markets. Stocks are light and demand steady. We still quote: Pig lead, $3.80 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—The market is somewhat quieter. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—Demand is more active and prices unchanged. We quote as follows: Ingot copper, 15 3-4 to 16c. per lb., and sheet copper, 21c. per lb.

Antimony—Business is more active, and prices continue to advance, the ruling quotation now being 13c.

Old Material—Business is quiet in most lines, prices being steady. Dealers buying, prices are as follows: Heavy copper and wire, 12 1-2c. per lb.; light copper, 11c. per lb.; heavy red brass, 10 1-2c. per lb.; heavy yellow brass, 8 1-2c. per lb.; light brass, 6 1-2c. per lb; tea lead, $2.40 per 100 lbs.; heavy lead, $2.60 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $9 to $10, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 5c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Importations have been fairly large, and dealers are well stocked. Prices of anthracite have advanced 10c. per ton. We quote: Anthracite in cars at bridges: Grate, $5.05 per gross ton; egg, stove and nut, $5.30 per gross ton; pea, $3.70 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80.

For Manitoba Metal Markets see page 40.

MINES AND MINERALS.

Another record in the line of cargoes on the great lakes was established when the steamer Elbert H. Gary, of the Pittsburg Steamship Co., the largest boat in commission on fresh water, passed through the Canadian Soo canal, carrying the largest load of iron ore ever taken down the great lakes. The Gary, which is 569 feet in length, had on board 11,42[illegible] tons of ore, but although she thus broke one record and established another the fact excites little more than passing comment, as the commerce of the lakes is growing so fast that such feats are being accomplished several times each year. While the Gary now holds the records, there are other boats in course of construction on shipyard docks of the lakes that will carry much larger cargoes than she is capable of.

* * *

The output of the collieries of the Crow's Nest Pass Coal Co. for the week ending June 23 totalled 11,972 tons, a daily average of 2,394 tons. All the mines were idle one day for the monthly holiday.

* * *

An application has been made for the right to develop coal lands on the Porcupine River, Whitney Township, which is in New Ontario's famous clay belt. The parties who make the application are confident that a good quality of coal, in large quantities, is contained in the property.

* * *

The shipment of ore from the Vermilion range to the works of the Dominion Iron & Steel Co., at Sydney, N.S., has commenced and promises to be as large as in any previous year.

* * *

In May the Granby Co. treated 55,420 tons of ore and 242,124 tons for the first five months of this year. Shipments for May would indicate net earnings of

between $70,000 and $75,000. The Granby Co. recover about 26 lbs. of copper per ton of ore, and, crediting the gold and silver values against copper costs, the company are securing a net profit of about 5 cents per pound, with 15 per cent. copper. The company will shortly blow in two large furnaces which will materially increase both production and profits.

* * *

The American Institute of Mining Engineers will hold their annual convention in Victoria, B.C., July 1 to 4. The delegates will visit Atlin and Dawson City and a baseball match will be played at midnight at the latter camp.

* * *

Engineers engaged on the surveys for the Grand Trunk Pacific Railway are reported to have made a rich discovery of oil just east of Lake Abittibi, in the farther Temiskaming district. A huge well pouring forth quantities of oil, estimated at 700 barrels a day, has been located, and it is evident that the flow has been going on for years. The constant flow has resulted in the formation of a lake of oil. The oil field is located on land belonging to the Province of Quebec.

* * *

A particularly promising discovery of copper has recently been made in Awenge Township, ten miles from the Soo, on the line of the Algoma Central Railway. A syndicate of residents of the two Soos have a vein of 500 feet uncovered, which shows throughout its whole length ore rich in copper and silver, as well as to the bottom of a shaft that has been sunk to a depth of thirteen feet. The average rock shows an assay of $37.98 per ton, while picked samples run as high as 30 per cent. copper. The company will immediately sink a shaft to a depth of 150 feet and then drift.

* * *

The total production of steel ingots and castings in Canada in 1904 was 148,784 gross tons, against 181,514 tons in 1903, a decrease of 32,730 tons. Bessemer and open-hearth steel ingots and castings were made in each year. Almost all the open-hearth steel reported in 1903 and 1904 was made by the basic process. The direct steel castings made in 1904 amounted to 6,505 tons. Canada has not made crucible steel prior to the present year.

UNITED STATES METAL MARKET.

Advance proofs furnished HARDWARE AND METAL by The Iron Age, June 20, 1905.

VERY little has occurred during the past week calculated to throw light upon the tendencies which are shaping the markets. Those who watch the water rushing into the mill are satisfied; others who study the reports of rainfall over the watershed are more doubtful. It certainly has not rained orders very hard for some time past, and while the great majority take that fact philosophically, a few are becoming a little uneasy.

In foundry pig iron the markets have weakened further and $11.25 for No. 2 at Birmingham has been done on a modest scale. The buying movement has not yet set in. How much longer it can be postponed is the question. Many consumers are pretty well covered well

into the third quarter, the furnaces being correspondingly booked. Still pig iron is accumulating at the furnace banks, and the demand for pig iron for steel-making purposes, in particular, in the central west, is light. The statement is emphatically made by the highest authority that the leading interest needs no outside iron for July, reports from other sources to the contrary notwithstanding.

The conditions in raw material are not readily reflected in the finished branches, with their "official" prices. The big mills in the heavy lines are busy for months to come; and in some instances are crowded beyond capacity, so that they must dole out the product with the aim to placate the maximum number of irate customers. But that is not true in all branches or in all parts of the country.

There are prospects of additional work from the lake shipbuilding yards. The railroads are still buying and large building operations in nearly all our great cities are flourishing.

The independent manufacturers of sheets and of bars have declined to sign the scale presented by the Amalgamated Association and it looks as though we were heading for a strike, with the odds heavily against the men.

Reports are current that several of the prominent mills are extending and renewing certain of the low-priced contracts on sheets and bars made some time since.

There are no particularly interesting developments in the export trade, which is being pushed vigorously and which promises to be larger than ever before.

LONDON METAL MARKETS.

From Metal Market Report, June 23, 1905.

Pig Iron—Middlesboro No. 3 foundry is quoted at 45s. 6d, and Scotch warrants at 49s. 4d, making prices as compared with last week unchanged for Middlesboro and unchanged for Scotch warrants.

Tin—Spot Tin opened firm at £140, futures at £138 17s. 6d, and after sales of 150 tons of spot and 260 tons of futures closed steady at £140 for spot and £138 17s. 6d for futures, making price as compared with last week 15s. higher on spot and £1 2s. 6d higher on futures.

Copper—Spot copper opened quiet at £66 3s. 9d, futures £66 2s. 6d, and after sales of nil tons of spot and 25 tons of futures closed quiet at £66 2s. 6d for spot and £66 for futures, making price as compared with last week unchanged on spot and unchanged on futures.

Lead—The market closed at £13 6s. 3d, making price as compared with last week 6s. 3d higher.

Spelter—The market closed at £24, making price as compared with last week unchanged.

The James Warnock Co., Limited, of Galt, share capital $200,000; purpose, to manufacture and deal in tools and implements. The directors are: K. B. Warnock, and C. B. Massey, of Toronto; and J. B. Warnock and F. T. Strong, of Galt.

British Columbia Trade News

Vancouver, June 22, 1905.

SOME prospect now exists of a settlement of the troubles at the Nanaimo collieries, which have closed the mines down for the present and threatened the business interests of the city with disaster, for the owners at one time considered closing the mines down permanently, as they declared it was impossible to work them under the new regulations enacted at last session of the legislature. Under these, it is made imperative that the 8-hour shift which the miners work, according to law, is to be from bank to bank. That is, eight hours from the time the men descend the shaft till they reach the surface again.

Contract miners, those working by piece, and that meant practically the whole force, were handicapped by this, for they had fully half an hour less time to work. The company, on the other hand, were unprepared to make further concessions, so the mines have been closed down pending a settlement. It is now thought possible that some arrangement can be reached.

Manager Stockett, of the company, issued a statement showing the net daily earnings of all miners to be $3.75 to $3.80 per shift for the last two months the mine was worked. This included boys working as miners' helpers, all being classed as miners, thus reducing the average of those properly classed as miners. Some of these made as high as $5 for the day of eight hours. Nanaimo business men will welcome a settlement, as present conditions spell ruin to many of them.

* * *

The B. C. Telephone Co., operating in all the principal cities of the province, are at present engaged in litigation with the City of Vancouver, the question immediately at issue being the right of the company, under its legislative charters, to enter upon lanes and streets of the city to lay conduits for underground wires without the consent of the civic authorities. The city council does not object to the laying of wires underground, but it stands upon the right it has to sanction such action, while the telephone company claims the right independent of civic permission. To test the matter the city has issued an injunction, which it seeks to have made perpetual, restraining the company from laying conduits on the lanes and streets without first making an arrangement with the city.

The question is much the same as that arising in Eastern Canada over a year ago, on similar claims by telephone companies.

* * *

Some interest is aroused in lumber circles by the announcement that the Great Northern Railway has instituted new rates of freight on shingles shipped from Puget Sound points to points reached in Eastern Canada. It would appear at first that there was a danger of American shingles from Puget Sound mills becoming a serious competitor to the B. C. manufacturer. However, the fact develops that the C.P.R. has always had in force rates similar to those now charged by the G.N.R., and the fact that B. C. shingles are better in quality than those from the Sound will hold the trade.

* * *

Preparations are well ahead for the erection of the superstructure of the magnificent million dollar hotel being built by the C.P.R. at Victoria. The first scowload of stone for the walls has been delivered, and will be followed rapidly by others. Other material is also being assembled, and as the foundation is in, the work will proceed with all despatch. The building will not be completed in less than a year and a half.

* * *

The opening ceremonies in connection with the turning of the waters of Coquitlam Lake through a 2½ mile tunnel, constructed by the Vancouver Power Co., were carried out on Friday last, a distinguished company of prominent civic and legislative officials, including most of the members of the B. C. Government, headed by Premier McBride, being gathered to see His Honor Lieut.-Governor Sir Henri Joly turn the golden key which operated the electric switch and opened the portal of the tunnel.

In 35 minutes from the opening of the portals the wall of water, 4 ft. in height, rushed out of the western end of the tunnel and dropped with a roar into Lake Beautiful, which has been made a reservoir to hold the waters of the two lakes in store for generating power. An installation of plant for 30,000 h.p. has been made, though that is far in excess of the quantity now used. The tunnel is 9 ft. square, and is cut through solid rock the entire two miles and a half. By raising the water level in Lake Coquitlam several feet, which is to be done with a dam at the outlet, the full limit of power can be kept up right through the year. Cheap power for manufacturing purposes, as well as reduced lighting cost in Vancouver, New Westminster, and adjacent districts, is anticipated as a result of the success of the enterprise.

* * *

Building is extremely active in both business and residential property in Vancouver and Victoria, promising to be above all previous records. New Westminster, too, has experienced a regular boom through the stimulus of preparations for the Dominion Fair, to be held in the Royal City in September. The usual labor troubles so familiar in Vancouver have been reduced to a minimum this year, and are practically all settled now. Very little, if any, disturbance has been caused by strikes, and the prospects are for a peaceable and prosperous building season throughout the Summer and Fall months.

The mills are running full capacity both on local business and for export to the Northwest. From the prairie districts, where prosperity smiles everywhere this year, the orders for lumber and material are coming in very satisfactorily.

* * *

So great has been the increase in the movement to the land in B. C. during the past year or two, it is now being materially felt as a factor in business. There are thousands of acres of lands available for agriculture in this province, and in most part favorably situated as to transportation, being within reach of railway facilities or steamboat service. Not only in the famed Okanagan District, but in all parts of the province, and nowhere more than in the

coast and Fraser River districts, hundreds of people are buying and settling down on land, in large or small holdings, and the movement has apparently just begun.

* * *

Rather a serious business difficulty is that which has caused the assignment of N. Thompson & Co., a leading machine works in Vancouver. The concern have been operating for a number of years and were thought to be in a prosperous condition, having in hand the ambitious project of building a very large floating drydock, similar to that at St. John, N.B., bonused by the Dominion Government. The liabilities of the company are set at $136,000, with assets nominally some $6,000 greater, on first preliminary survey of the affairs by the assignee, F. Burnett.

While Mr. B. N. Thompson, the senior member of the company is in hopes of reorganizing with fresh capital, the works are for the present practically closed down. The Molsons Bank is the principal creditor, being represented in the list at nearly $100,000.

Suggest a "Metallic" Front to your neighbor for that new building.

Pages 384 to 399 of our Catalogue show styles that cannot fail to please him and reveal to him possibilities in sheet metal work he never thought of. A quick sale at a good profit will surely be the result.

We make up these fronts in a great variety of beautiful designs.

Nothing is too simple or too intricate for us to undertake.

New trade and extra profits are in store for live dealers who don't overlook the local possibilities of "Metallic" building materials.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopedia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request to any builder, contractor or dealer of responsibility.

"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

Nova Scotia Trade News

Halifax, N.S., June 27, 1905.

NO change worthy of special note has occurred in the hardware business since last report. The turpentine market is a trifle easier, and there has been a slight decline in price, but it is not expected that the decline will continue, as holdings are light. There is a good demand for paints and oil, and some sales have been made of haying tools, but they are very light as yet.

Orders are coming in quite freely for wire fencing and a good jobbing trade is being done in nails and glass. Explosives are in good demand, and trade is showing a slight improvement in some lines. Collections continue fairly satisfactory.

The Dominion Iron and Steel Co. have awarded a contract to Heyl & Patterson, of Pittsburg, for the remodelling of battery No. 9, and for the building of fifty new coke ovens. This same firm built the company's wash plant. Battery No. 9 is the only lot of non by-product ovens in the plant, and has not been used heretofore. These ovens will be remodelled into by-product ovens. The new ovens, which will comprise battery No. 10, will be by-product ovens of the same type as those now in use. This addition to the ovens will increase the coke supply to the extent of about 150 tons per day. The new ovens will supply blast furnace No. 3 with coke. Work will be commenced as soon as the excavation and concrete work, which is being done by the steel company, is completed. It is expected that the remodelling and the construction of the new ovens will be completed in about four months.

The Robb Engineering Co., Amherst, has received an order from the Dominion Coal Co. for two 100 horse-power Robb-Mumford boilers, from the Standard Manufacturing Co., Sackville, for a 125 horse-power boiler, and from R. S. Carter, Maccan, N.S., for a 65 horse-power engine.

The workmen at the Nova Scotia Steel Co.'s pier, North Sydney, did some record-breaking at North Sydney last week, when the steamer Trold was discharged of her cargo of iron ore from Wabana in nine hours.

It is estimated that it will require a train of twenty-one cars to haul the wire that it will take to fence the railway right of way on the South Shore, between Barrington and Shelburne, N.S.

The first shipment of steel rails by the Dominion Iron and Steel Co. was made to-day, when a car, containing fifty tons, was sent forward from Sydney to Montreal for the Grand Trunk Railway. This is the first instalment of the 25,000 ton contract recently made and the balance will be shipped continually as the rails are made until the contract is filled. Everything is working satisfactory at the mill, and the officials expect to make a record output in the near future.

PERSONAL MENTION.

Mr. J. B. Reid, of H. S. Howland & Sons, lost a few days during the past week owing to illness.

C. A. McDonald, of Winnipeg, is erecting a large building for general hardware at Mortlach, Assa.

Mr. J. B. Learmont, of Caverhill, Learmont & Co., Limited, has gone to the country for a short rest.

Mr. W. G. Jones, treasurer of the Pease Foundry Co., is making a fortnight's business trip to Winnipeg.

Mr. Wm. Smaill, manager of the Canada Horse Nail Co., Montreal, spent a few days in Toronto during the past week.

Mr. T. G. Hodgson, of the staff of Geo. D. Wood & Co., Winnipeg, who has been ill for some weeks, returned to work on Monday last.

The George Hunter Hardware Co., Vancouver, have opened a branch of their business in Fairview, at 2021 Granville street. A complete line of hardware, etc., will be carried.

Mr. J. O. Thorn, of Toronto, manager of the Metallic Roofing Co. of Canada, Limited, is in Winnipeg at present superintending the erection of the company's branch on Notre Dame avenue.

Mr. Cherry, of Sargent & Co., New York, was in the city the early part of this week. He was jubilant with the way business was looking in Canada and his firm were getting a very generous share.

Richard Howse, who has carried on the tinsmith business in St. John, N.B., for the past fifteen years, left for the west this week, where he will in future reside. His family will join him in a few months.

Mr. L. E. A. Cholette, who has been connected with the Canadian Rubber Co., Limited, of Montreal, for over 25 years in various capacities, has severed his connection with the company, to take effect July 1.

During the electrical convention in Montreal last week the windows of the headquarters of the Syaer Electric Co. were beautifully decorated with flags and electrical insignia and the effect was remarked by a large number of the delegates.

McLennan, McFeely & Co., Vancouver, have secured the contract to supply construction implements for the Nicola, Kamloops & Similkameen Coal & Railway Co. The order includes all hardware goods, picks, shovels and everything else in their line.

At the convention of the Canadian Electrical Association in Montreal last week, one of the features which added very materially to the happiness of the meeting was the courtesy extended by the management of the Montreal Street Railway Co., which took the form of a substantial book of pass tickets on their cars all over the service, around the mountain and to Lachine. Hundreds of women and children were given great happiness by these tickets and in addition they saw Montreal in a way that otherwise would have been missed. The Street Railway Co. and its service came in for much praise from the delegates and others.

WINNIPEG, - CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, June 30, 1905.)

Office of HARDWARE AND METAL
Room 511 Union Bank Building,
Winnipeg, Man.

A CONVENTION of the Western Retail Hardware and Stove Dealers' Association is to be summoned by the executive to meet in Winnipeg during the exhibiton. Scott Memorial Hall, on Princess street, has been secured for two full days—July 26th and 27th—and ample time will be given for a thorough discussion of all association matters. In the months that have passed since the last convention was held an energetic canvas of the trade has been made by Secretary McRobie, and many new members have been added to the list. The association is growing in strength, and a uesful and enthusiastic convention is assured. The first meeting will be held at nine o'clock on the morning of July 26th.

* * *

Mr. W. W. Wright is a late addition to the staff of The Miller-Morse Hardware Co., coming to this city from Louisville. Kentucky, where he was in the employ of the Belknap Hardware & Manufacturing Co. Mr. Wright is the second to join the Miller-Morse Hardware Co.'s staff from the Belknap Hardware Co., Mr. Theodore Kork, of catalogue fame, being the first.

* * *

The Dominion Bridge Co., of Montreal, will open a branch plant in Winnipeg very soon, to supply the western demand for structural steel.

* * *

Business continues very brisk, particularly in all lines of builders' hardware. Prices are steady throughout, and there are no changes of importance to note.

* * *

Screen Wire Cloth—Price is steady at $1.55 per 100 square feet.

Poultry Netting — In brisk demand. For the 2-inch mesh in No. 19 gauge wire, prices are as follows:

24-inch roll, perroll	$1 20
30 " "	1 50

Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are quoted as follows:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—We quote:

Coil chain, 5-16 inch	9.25
" ¼ inch	7.25
" 5-16 inch	5.20
" ⅜ inch	4 60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discount 60 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g.hickory, doz.	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—We quote:

Axes, chopping	$ 6 75 to 12 co
" double bitts	12 00 to 18 co

Files—We again quote as follows:

"Arcade"	70 and 10 p.c.
"Black Diamond"	60 p.c.
"Nicholson's"	62½ p.c.

Building Paper—In very brisk demand, and large quantities are moving. Prices are quoted as follows:

Anchor, plain	55c.
" tarred	70c.
Pure fibre, plain	60c.
" " tarred	80c.

Ammunition, Etc.—Prices and discounts are quoted as follows:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c
Dominion, C.F., pistol	30 p.c.
" military	15 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.
Loaded shells:	
Eley's and Kynoch's soft, 12 gauge	
black	15 00
chilled, 12 gauge	16 00
soft, 10 gauge	18 00
chilled, 10 gauge	19 00
Shot, Ordinary, per 100 lb	6 25
Chilled	6 75
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—Business is fairly active. Prices are quoted as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 25
Lathyarn	11 25

Solder—The price is 20 cents per lb. for ordinary quantities, with concessions for large orders.

Iron and Steel—A steady, featureless market is reported this week. Prices are quoted as follows:

Bar iron (basis)	2 50
Swedish iron (basis)	4 75
Sleigh shoe steel	2 65
Spring steel	3 00
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	13 00

Black Sheets—This market is active and steady. Prices are firm. We quote:

Black Sheets, 10 to 16 gauge, 100 lb	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	10

Galvanized Iron—Business continues exceptionally brisk. Prices are steady and are still quoted as follows:

Apollo, 16 gauge	4 00
18 and 20 gauge	4 00
22 and 24 gauge	4 25
26 gauge	4 25
28 gauge	4 50
30 gauge or 10¾ oz	4 75
Queen's Head, 24 gauge	4 25
26 gauge	4 50
28 "	4 75

Tin Plates—Prices are quoted as follows:

Tinplate, IC charcoal, 20 x 28, box	9 50
" IX "	11 55
" XXI "	13 00

Canada Plates—There is a fairly active demand. Prices are:

Canada plate, 18 x 21, 18 x 24	3 25
Canada plate, 20 x 28	3 50
Canada plate, full polished	4 00

Sheet Zinc—The price of cask lots is $8.25 per 100 lbs.; price of broken lots is $8.75.

Pig Lead—$4.50 per 100 lbs.

Iron Pipe—We quote:

Black iron pipe, ⅛ inch	....
" ¼ "	2 45
Black iron pipe, ⅜ inch	2 65
" ½ "	3 00
" ¾ "	3 80
" 1 "	5 50
" 1¼ "	7 45
" 1½ "	8 95
" 2 "	12 30

ONE carload hard carbon pitch now in our warehouse. Canadian General Electric Co., Limited, Peterboro'. (28)

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Supplying Coal for the Dominion Buildihgs," will be received at this office until Tuesday, August 8, 1905, inclusively, for the supply of Coal for the Public Buildings throughout the Dominion.

Combined specification and form of tender can be obtained on application at this office.

Persons tendering are notified that tenders will not be considered unless made on the printed form supplied, and signed with their actual signatures.

Each tender must be accompanied by an accepted cheque on a chartered bank, made payable to the order of the Honourable the Minister of Public Works, equal to ten per cent. of the amount of the tender, which will be forfeited if the party tendering decline to enter into a contract when called upon to do so, or if he fail to complete the work contracted for. If the tender be not accepted the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

By order,

FRED. GELINAS,
Secretary.

Department of Public Works,
Ottawa, June 26, 1905.

Newspapers inserting this advertisement without authority from the Department, will not be paid for it. (27)

Petroleum—No change in price. We quote:

Silver Star, per gal	20½c.
Sunlight "	21½c.
Eocene "	23½c.
Pennoline "	24½c.
Crystal Spray "	23½c.
Silver Light	21½c.

(In barrels f.o.b. Winnipeg.)

Paris Green—In seasonable demand. We quote:

English Paris Green—Petroleum barrels, 14 1-4c.; arsenic kegs, 14 1-2c.; 50 and 100-lb. drums, 15c.; 25-lb. drums, 15 1-2c.; 1-lb. tins, 17c.; 1-2-lb. tins, 19c.; 1-lb. cardboard boxes, 16c.; 1-2-lb. ditto, 18c. Terms 2 per cent. off for cash in 30 days; 90 days net.

Canadian Paris Green—50-lb. drums 17c., bulk 18c.; in 1-lb. packages 20 cents.

Paints and Oils—Since the reduction in turpentine noted in these columns last week there have been no further changes. Oil is steady at the prices quoted for some weeks, and the paint and color list is unchanged. There is a heavy movement of all classes of painting material. We quote again as follows:

White lead (pure)	$5 00 to $5 50
Bladder putty, in bbls	0 02½
" " in kegs	0 02¾
Turpentine, pure in barrels	$ 1 00
Less than barrel lots	1 05
Linseed oil, raw	0 62
Boiled	0 65

Window Glass—Prices are maintained firmly, as there is a strong demand, and supplies are none too large. There has been no change since the advance about six weeks ago, which left prices as follows:

16-oz. O.G., single, in 50-ft. boxes—	
16 to 25 united inches	$2.40
26 to 40 "	2.65
16-oz. O.G., single, in 100-ft. cases—	
16 to 25 united inches	4.25
26 to 40 "	4.50
41 to 50 "	5.00
51 to 60 "	5.50
61 to 70 "	6.00
21-oz. C.S., double, in 100-ft. cases—	
26 to 40 united inches	7.35
41 to 50 "	8.40
51 to 60 "	9.45
61 to 70 "	10.50
71 to 80 "	11.55
81 to 85 "	12.60
86 to 90 "	14.75
91 to 95 "	17.30
6 to 100 "	

HINTS FOR HUSTLERS.

Show your clerks what hustle is by hustling yourself.

A smiling clerk is a better advertisement than a gilt sign.

A clean show window is a better trade drawer than a surplus stock of soap.

Unfailing politeness will do your store more good than daily bargain sales.

A bright gossipy handbill with some real bargains on it will do a lot of talking for you.

Remember that so far as your store and stock are concerned, your customers prefer cleanliness to Godliness.

Keep your promise to deliver goods on time. If you don't you will spoil some dinners and lose some good trade.

Never get wrathy either with customers or clerks. If you do you're sure to sour something.—From the Retailers' Journal.

Are you handling our

STEEL FEED TROUGHS?

If not we can make you an interesting proposition as our NEW TROUGH CATALOGUE and other literature are now ready to assist the trade. We supply you liberally with them and give exclusive agency. Let us hear from you.

Work up a Trade

It is easy for you with the field at your command to work up a trade for the

METALLIC ASH-SIFTER

It is made in Canada; it is cheap; it will last as long as ten wooden sifters, besides, with the use of **Our Patent Wire Bale** and **Metal Cover,** labor is saved and dust kept from rising. Illustrated circular and price on request.

C. M. CUTTS & CO., Sole Makers, **Toronto Junction, Ont.**

HARDWARE TRADE PARAGRAPHS.

Lawn swings and hammocks are in great demand. The variety of the latter enables the purchaser to suit himself in style, price and color. To display the hammocks hang them by one end from the ceiling and have a pole with a hook handy so that any one of them can be detached easily. They will hang low enough to allow inspection and at the same time will be out of the way to a considerable extent.

* * *

Water filters are in demand more in the Summer than in cold weather. With so much surface drainage now the drinking water of many towns is contaminated. A good line of these ought to be in every hardware store.

* * *

Just for a change make a "kitchen furnishings department." All that is needed is a counter—and the goods. They would include food choppers, paring knives, pot scrapers, wire dish cloths, cooking spoons, egg beaters, graters, coffee pots, tea kettles, pots, kettles, pans, enamel-ware, toasters, asbestos mats, tea strainers, griddles, waffle irons, cork screws, etc., etc. A counter filled with these things and placed near the centre of the store ought to attract attention.

* * *

How are your fellow merchants fixed for nail pullers? Next time the grocer comes in ask him. And try the druggist, the drygoodsman, the shoe dealer, and all of them. You may sell a dozen this way.

* * *

It is unsatisfactory business handling a low grade of lawn hose. About the first time it bursts—as it will do very soon, in all probability—the purchaser will forget that you told him it was a cheap brand and all that he will remember is that you sold it to him and that it "busted" and sprinkled him instead of the lawn. He will not be so friendly toward you after that. A good, substantial hose, though costing a little more, gives satisfaction to everyone that has anything to do with it.

* * *

Builders' hardware is still a strong number. The demand is rather increasing as the season advances and the jobbers have been unable to get their orders filled with anything like promptness. The manufacturers are doing their best just now, but if they had made up a reasonable amount of stock in advance there would not have been the trouble that there is. Some jobbers are more fortunate than others and have in fair stocks, but none of them are boasting much about the condition of their builders' hardware stock.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

786. A Sheffield firm manufacturing butcher knives, painters' and glaziers' knives, paper and painters' scrapers, graining combs, etc., ask for communication with Canadian buyers.

787. A Sheffield firm manufacturing cutlery, imitation ivory knives, razors, pocket, farriers,' putty and palette knives, steel-cased carvers, etc., desire communication with wholesale buyers of these goods in Canada.

796. Two French companies of automobiles want active agents for the Dominion.

797. The most important manufacturer of arms in France wishes an active representative in Canada.

PAINT, OIL AND BRUSH TRADES

LINSEED OIL AND WHITE LEAD.

FOR some time past a spirited controversy has been waged in the Oil and Colourman's Journal, of London, Eng., as to whether linseed oil combines with white lead? A contribution to the subject by the well known chemist, George H. Hurst, of Manchester, is of interest to all who have looked into this subject. He says :

"I am not going to discuss the controversy in detail, but would like to be allowed to record the result of some experiments which I have had in progress for some weeks. I have had in my possession some old samples of paste white lead and it occurred to me that if such a thing as saponification did occur these would be likely to show it. I proceeded to extract these samples with methylated ether, petroleum ether, and alcohol. The solutions obtained were submitted to evaporation to get rid of the solvent, and the oil obtained was quite clear and fluid (none was got with alcohol). This oil was tested for lead, which was found to be absent. The residual lead was quite dry and powdery when the solvent had been evaporated off, and on examination showed no sign of containing any oily or fatty matter. Evidently the mere grinding of white lead with linseed oil in the ordinary course of work does not cause any saponification to occur.

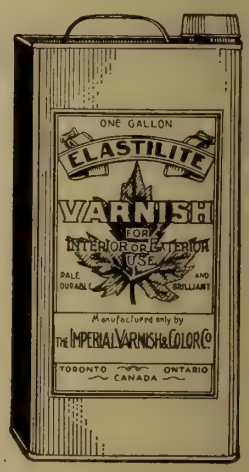
"The question arose : Is linoleate of lead soluble in ether, petroleum ether, and alcohol ? Some was made by boiling linseed oil with caustic soda to make a linseed oil soap, care being taken to have the saponification complete and to produce a perfectly neutral soap. This was then poured into a solution of lead acetate, the lead linoleate formed carefully washed free from any excess of lead acetate or sodium acetate and dried. Weighed amounts were next put into methylated ether, petroleum ether, and alcohol. I found that methylated ether will take up 2 to 3 per cent. of lead linoleate, petroleum ether takes up 3 to 3½ per cent., while alcohol only takes up 1 per cent. All these solutions show markedly the presence of lead. These results go to show that if, when white lead is mixed with linseed oil, any saponification does occur, the linoleate of lead would dissolve in the ethereal solvent used, and its presence could be detected in the oil left behind. As stated above, such was not found to be the case."

TURPENTINE PRODUCTION IN INDIA.

ACCORDING to an article in the Chemist and Druggist, the production of turpentine on a large scale, and the manufacture of turpentine into oil and colophony, has lately also been taken up in India, since it was found that this industry is capable of development. The turpentine is obtained from the extensive pine forests of the Himalayas in the northwestern provinces and in the Punjab, and in this case "Pinus longifolia" yields the balsam. The first turpentine oil distillation in the northwest provinces was established in 1888, at Dehra Dun, but it did not pay because it was too far away from the forests, the cost of transport of the balsam making the manufacture too expensive. For this reason two more distilling stations have been erected, in 1895 at Naina Tal, and in 1899 at Nurpur, District Kangra, Province Punjab, both of which promise to be more remunerative on account of their more favorable position. They show good results, so that it may be expected that the products manufactured there, for which there is a good demand in the country itself, will soon begin to compete seriously with the imported articles. This is all the more probable, as the British Government shows considerable interest in this young industry.

CANADA'S OIL FIELDS.

THERE is a difference of opinion in regard to the future of the new oil field in the vicinity of Leamington, Canada, says the Derrick. The two strikes of the New York Oil Co., which started at 75 barrels an hour, have ceased flowing. The owners say that the stoppage was due to salt water, and that as soon as the wells are put to pumping, they will again show a remarkable oil production.



The small producers throughout the district appear to be holding up nicely, and are dividend paying propositions. Of the 134 wells drilled in the field, 100 are now yielding oil, while three are gas wells, supplying the town, and the remaining 31 are dusters.

The "proved" territory lies north of Leamington, and is about six miles long and less than a mile wide. At Wheatley, seven miles east, and Comber, to the north, a few wells have been drilled, which led to the belief that a considerable area of profitable territory may yet be developed. The industrious oil promoter is largely in evidence, and the same methods that have been common in nearly every American oil field are employed with considerable success.

In spite of numerous 100-barrel wells reported, the shipments from the field have not exceeded 200 carloads or 30,000 barrels a month. This represents an average daily production of about 1,000 barrels, which probably represents the limit of the field's capacity.

Paint and Oil Markets

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 30, 1905.

THIS is the busy time for all paint and oil makers, and the demand continues to increase every day. The decline in turpentine was maintained, and there are signs of a further drop. This will no doubt be adjusted inside of another month. Linseed oil is inclined to be scarce, and the mills are very busy. White lead continues to be in good demand. The run on Paris green keeps up, as it is the most effective means of attacking the potato bug.

Canadian Paris Green — Barrels, 15 1-4c.; arsenic kegs, 15c.; 50 and 100-lb. drums, 16c.; 25-lb. drums, 16 1-2c.; one pound packages, 17c.; half-pound packages, 19c.; one pound tins, 18c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green—Pure English Paris green, petroleum barrels, 15 1-4c.; arsenic kegs, 15 1-2c.; 50 and 100-lb. drums, 16c.; 25-lb. drums, 16 1-2c.; one pound paper boxes, 17c., one pound tins, 18c.; one-half pound paper boxes, 19c.; one-half pound tins, 20c. Terms, 2 per cent. off thirty days, or ninety days net from date of shipment.

Turpentine—Single barrels 93c. per gallon; two to four barrels, 92c. per gallon. For smaller quantities than barrels, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Raw, one to four barrels, 52c.; five to nine barrels, 51c.; boiled, one to four barrels, 55c.; five to nine barrels, 54c. f.o.b. Montreal., Net 30 days.

Ground White Lead — Best brands Government standards, $4.70 to $4.85; No. 1, $4.45 to $4.60; No. 2, $4.20 to $4.35; No. 3, $3.87 1-2 to $3.97 1-2; No. 4, $3.50 to $3.60, all f.o.b. Montreal.

Dry White Zinc—Pure dry in casks, 7c.; in 100 lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb kegs, 6 1-2c.

White Zinc (ground in oil)—Pure. 25 lb. iron, 7 1-2 to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—Pure linseed oil $1.75 to $1.85. Bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Shellac Varnish — Pure white in barrels $2.30 to $2.50; pure orange, $2 to $2.20; No. 1 orange, $1.90 to $2.10.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil—8 3-4c. to 9 1-4c. in wholesale lots, and 1-2c. additional for small lots.

Litharge—Ground, in casks, 5c.; in less quantities, 5 3-4c.; flake litharge, casks, $5.50; smaller quantities, $6 per 100 lbs.

Refined Petroleum—No change has occurred on this market. Prices are steady. Our quotations are: American prime white 14 1-2c., American water white 16c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, June 30, 1905.

PRICES of linseed oil and turpentine hold firm at the quotations named last week, the light stocks preventing any drop, even though conditions in outside markets warranted a change. New stocks of turpentine should be received at any time, but prices are not likely to fall very much during the coming week.

Paris green and mixed paints are moving lively, no falling off in the demand for either line being reported. One firm having a branch in Toronto reports sales to have been $14,000 in excess of any previous year up to the end of June. This, too, remembering that last year was a record season.

White lead is unchanged, and the new budget is still hanging fire, while the politicians talk on the school question. Those who made large purchases some months ago in expectation of a jump in prices have got good money locked up in goods which, fortunately, have no chance of decreasing in value.

White Lead—Ex Toronto, pure white lead. $4.75; No. 1, $4.37 1-2; No. 2, $4; No. 3, $3.62 1-2; No. 4, $3.35 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 1-2 lb. packages; genuine dry white lead, in casks, $4.25.

Red Lead—Genuine in casks of 560 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75; No. 1, in casks of 500 lbs., $4 to $4.25; ditto in kegs of 100 lbs., $4.50.

White Zinc—Genuine French V. M., in casks, $6.50 to $7; Lehigh, in casks, $6 to $6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.60 to $2.80; white. $2.65 to $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 57c.; boiled, 60c.; 5 to 9 barrels, raw, 55 to 56c.; boiled, 57 to 58c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine — Single barrels, $1; 2 to 4 barrels, open; 5 barrels

Quick Drying and Durable

An excellent floor paint for resisting the rough usage to which floors, piazzas, steps, and kindred surfaces are necessarily subjected.

Granite Floor Paint

Crude Petroleum—Conditions are unchanged. We quote: Pennsylvania, $1.29; Ohio, 84c.; Somerset, 81c.; Indiana. 88c.; Canadian, $1.27.

Glass—See current quotations at the end of this issue.

WINDOW GLASS—MONTREAL.

The window glass situation is growing more complex every day. Very little glass is coming in, and the big wholesalers are by no means free from nervousness over the problem facing them. The shortage in certain sizes is very troublesome, as it involves a lot of extra cutting, and it is almost always a source of loss of time and glass. We quote: First break, 50 feet, $2.00; second break, $2.10; first break, 100 feet, $3.75; second break, 100 feet, $3.95; third break, 100 feet, $4.50; fourth break, 100 feet, $4.75; fifth break, 100 feet, $5; sixth break, 100 feet, $5.50; seventh break, 100 feet, $6.00; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do.. $20; eleventh do., $24, and twelfth do., $28.50.

A shining array of cutlery in a clean case is sure to catch the eye of the customer.

BRITISH COLUMBIA TURPENTINE.

VICTORIA, B.C., is to be the scene of an experiment conducted by a new company aiming to utilize the native fir tree for the production of resin, turpentine, and other by-products. The preliminary work has been carried out without ostentation, and there has been no attempt to exploit the public in selling stock, those interested having put their own capital in the business, feeling assured that it will be a success. The works will probably be in operation in a small way before the end of July.

The process employed is new and machinery recently patented and being manufactured specially for this plant will be installed. C. M. Holbrook, of Wyoming, who has made a thorough investigation into the working of plants in the United States and other countries where the manufacture of turpentine is followed, is to have charge of the enterprise.

For a little time at first the process will be in an experimental stage. Those interested have little doubt as to the success of the new machinery, and have invested a large sum in it.

The raw material is unlimited, the native fir being rich in resinous and other valuable substances. The industry is one which is capable of enlarging to vast proportions. Those interested are prepared to extend it just as soon as the machinery has proved itself economical in the recovering of the by-products. The industry, when in full swing, will employ a considerable staff.

SECURED CHARTER.

The Electric Development and Securities Co., of New York, and the International Electric Sureties Co., of Toronto, have secured the charter of the Niagara-Welland Power Co. The latter company were originally chartered in 1894, and have until 1913 to complete their work. The site of the proposed power house will be about four miles east of St. Catharines, at a point on the escarpment where a fall of 210 feet can be secured. The water will be brought to this point by a canal, eight miles long, from the Welland river, which will be tapped at Montrose. The water, after the fall, will be conducted by a tail race to Lake Ontario, a further distance of six miles. The present intention is to construct a canal of sufficient size to provide water for the development of 100,000 horse-power, which will be converted into electricity and distributed to the present centres of industry in South Western Ontario.

REMOVING RUST FROM IRON.

It is often very difficult to remove rust from articles made of iron. Those which are most thickly coated, are most easily cleaned by being immersed in a solution, nearly saturated, of chloride of tin. The length of time they remain in this bath is determined by the thickness of the coating of rust. Generally twelve to twenty-four hours is long enough. The solution ought not to contain a great excess of acid, if the iron itself be not attacked. On taking them from the bath, the articles are rinsed, first in water, then in ammonia, and quickly dried. The iron, when thus treated, has the appearance of dull silver. A simple polishing gives it its normal appearance.

STOVES AND TINWARE.

STOVE MANUFACTURERS CONFER.

CANADIAN stove manufacturers had a pleasant session last week at the Del Monte Hotel, Preston.

Clare Bros. entertained the members of the association to a trolley party to Berlin, which was greatly enjoyed.

Among those in attendance at the convention were: Adam A. Stewart, of the Jas. Stewart Mfg. Co., of Woodstock; G. P. Buck, and W. E. Buck, of the Buck Stove Co., Brantford; O. G. Carscallen, of the Gurney-Tilden Co., Hamilton; John Milne and Jas. G. Insole, of the Burrow, Stewart & Milne Co., Hamilton; W. H. Carrick and R. G. Lockhart, of the Gurney Foundry Co., Toronto; J. K. H. Pope, of the McClary Mfg. Co., London; Geo. A. Clare and F. Clare, of Clare Bros., Preston; and J. F. Stewart, of Hamilton, secretary of the association.

No important business came before the conference, prices and discounts remaining unchanged. The next meeting will be held at Hotel Brant, Burlington, in August.

TIN IN BOLIVIA.

RECENT consular reports from Bolivia state that if the Bolivian output of tin expands in the future in the same proportion as it has done of late years, Bolivia will shortly occupy the first place as a tin-producing country. The exports during 1904 were 455,979 quintals of 100 lbs., or something in excess of 200,000 tons. The vice-consul of the Oruro Province says that the prosperity of that district is due entirely to the great increase in the production of tin. During 1904 the quantity despatched from Oruro was 8,000 tons of metallic tin, against about one-half that amount in 1903. The American capitalists who endeavored to secure control of the tin product of the Straits Settlements some time ago without success have turned their attention to Bolivia, where they have acquired a number of properties in the Tres Cruces region near La Paz.

DEMONSTRATING STOVES.

DEMONSTRATING is undoubtedly an excellent means of advertising, says the Hardware Trade. This is especially so in the smaller communities where such things are not so common. The fact that a stove man will have an expert in his store to bake biscuits and make pancakes and give them away is a piece of news of real importance in the rural community. If there is not a large crowd there at the time of the demonstration it will be because the people were not sufficiently advised of the fact or on account of very bad weather. And what better chance to advertise is there than to have an audience of several hundred people to talk directly to and to show the stove in all its good points to? Frequently in connection with the demonstrations of the cooks or ranges there is given away a stove or possibly a small sized range. Baking contests for the young girls are frequently arranged with the prize a small sized, but perfectly constructed, range. These are good attractions, also, though possibly not quite so good as a first-class demonstration with an expert in charge.

FROM THE HARDWARE TRADE.

How about camp stoves?

Well polished is half sold.

Oil cook stoves are selling better each year.

When in doubt polish up the stoves on display.

Now is a good time to put a cook stove in the window.

Instantaneous water heaters are good sellers in the Summer months.

It is not always the best appearing stove that does the best cooking.

There is no season for stove polish. It sells twelve months out of the year.

You can't judge a stove by the amount of nickel there is in the trimming.

Why not fix up a few of those old gasoline stoves and sell them to Summer cottagers?

With so much prosperity floating around the stove man should get a full share of it.

Use cuts in your stove advertising, but do not trust them to do all the talking. Some explanation should be run with them.

It is no easy matter to become an expert stove salesman. There are many points about an ordinary cook stove that are not always clear. The salesman cannot know his goods too well.

There is always something in the tinware stock that will do for a special sale. If it is not tincups it is coffee pots or tea pots or dishpans. These are staple lines that will attract trade any time if offered at the proper prices.

Rightly priced the profit on a stove is enough to make the salesman take every care to sell it. He cannot afford to take fifty cents' worth of time to sell a ten-cent damper, but a dollar's worth of time or more will not be misspent in selling a good stove.

NON-BURNING BREAD TIN.

Messrs. Hoods, Limited, of the International Exchange, Birmingham, Eng., are now introducing to the trade a new line in the shape of a non-burning bread tin. The tins are made in four sizes, 1, 1½, 2 and 3 lbs. respectively. The novel feature of the tin is the double bottom. Upon the bottom proper of the tin is fixed a perforated metal stamping, which raises the tin itself from contact with the oven shelf, and allows a steady current of air to play between the tin and the shelf. The effect of this construction of the tin is that the bread is never likely to burn, neither will the crust be hardened. Practical tests that have been given to the tin prove the correctness of the theory upon which the inventor has worked.

EASE OF OPERATION

is one of the many advantages of the Russwin Food Cutter. It CUTS—does not tear, grind or mash. Knives are self-sharpening—easily adapted to cut coarse, cut fine, or pulverize. Try it. For sale everywhere. Made by

THE
Walker Pilot Steel Range

Nearly every stove catalogue contains this assertion, "No range has what is called a draft, the chimney provides the draft." But when the range is hitched to the chimney, consider the importance of a wide, evenly distributed draft along the entire length of the grate, as embodied in the Walker "PILOT," and affording perfect, even combustion, and then look at the small retarded draft under the fire door at the end of the grate as seen in so many ranges. The difference is obvious—Economy, Perfect Regulation and Quick Results.

WRITE FOR PARTICULARS

THE WALKER STEEL RANGE CO., LIMITED
GRIMSBY, Ont.

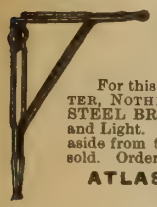
There is something more than mere glitter to the

Imperial Oxford Range

It is built for business and looks the part.

Devoid of useless devices, it is possessed of many unique advantages over other Ranges that make easy trade talking points with which to convince intending purchasers.

The principal of its diffusive flue which keeps the oven at an even temperature for hours at a time is so plain as to be readily understood by any customer. Thrifty housewives everywhere are talking about the remarkable oven that bakes evenly and perfectly without burning. Interest is being stimulated constantly by our aggressive advertising.



The superiority of its oven makes the Imperial Oxford Range a ready seller.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

A MASS meeting of the leading Chinese merchants in Vancouver, B.C., assembled under the auspices of their Board of Trade Monday evening and declared a boycott on U. S. goods. Eight hundred Chinamen listened to strong speeches criticizing the insolence with which immigration officials of the United States treat distinguished natives from China, visiting the Republic. The sum of $1,000 was subscribed on the spot to be forwarded to the merchants of Shanghai, the receipt of whose circular to all Chinese bodies abroad was the cause of the meeting being held. Money will be used to pay Chinese coolies for refusal to work at cargoes on ships containing U. S. goods. The difference in the treatment received in Canada was pointed out and all pledged themselves to buy Canadian goods in preference to American. There are many thousands of Chinese resident in Vancouver and this will make a considerable difference to Canadian manufacturers.

The Welland-Thorold Electric Railway is to be constructed at once.

Guelph has voted to spend $55,000 to extend and improve the gas plant which is municipally owned.

The Dominion Bridge Co. have decided to install a plant in Winnipeg to manufacture for their western business, and a site is being looked for.

J. Y. Griffin & Co., pork packers, etc., Winnipeg, are looking for a location in Fort William with a view to establishing a branch there.

E. G. Barrett, of the Vulcan Iron Works, Winnipeg, is spending a few days in Calgary investigating the situation, with a view of establishing a branch.

An American firm, manufacturing composite roofing, is to establish a branch at Brantford. An Ontario charter will be secured and the business conducted as a separate concern.

Guelph is offering inducements to the Fielding Chemical Co., of Toronto, and they may locate in the Royal City in the premises formerly used by the Guelph Linseed Oil Co. Twenty men are to be employed.

The Western Counties Electric Power Co., with headqdarters in Hamilton, are negotiating with Brantford regarding the construction of a line to the latter city and the supplying of power for lighting and other purposes.

The Robb Engineering Co., Amherst, N.S., have received an order from the Dominion Coal Co. for two 100 horse-power Robb-Mumford boilers; from the Standard Manufacturing Co., Sackville, N.B., for a 125 horse-power Robb-Mumford boiler, and from R. S. Carter, Maccan, N.S., for a 65 horse-power engine.

The Mundy Lumber Co., composed chiefly of Pennsylvania capitalists, will open its new lumber mill at Three Valley Lake, near Revelstoke, on July 1. The mill, which was installed by the Waterous Engine Co., is what is known as a double-cutting band mill, equipped with the latest details of machinery. It will have a capacity of about seventy thousand feet of lumber per day.

The first shipment of steel rails was made by the Dominion Iron and Steel Co. on June 26, when about 50 tons were shipped to Montreal, being an instalment of the 25,000 ton contract for the Grand Trunk Pacific. Further shipments will be made from time to time, until the order is filled. The mill is now producing rails at the rate of 75 tons per hour. It is only about a week since it was put into commission.

The assignment is announced of N. Thompson & Co., engineers, boilermakers, etc., of Vancouver. The firm of N. Thompson & Co. has consisted of N. Thompson, Wm. McCulloch and Andrew Muir, and has been brought conspicuously before the public during late years as promoters of the Vancouver dry dock in respect of which a substantial subsidy was voted them two years ago by the Federal Government.

The Dominion Government has appropriated $15,000 for making experiments with the electric process of smelting ores and manufacturing steel at Sault Ste. Marie, and the Consolidated Lake Superior Power Co. will furnish a building and dynamo capable of supplying 400 electric horse-power for four months free of charge. All kinds of ores will be experimented with, and important results are expected to be obtained. It can easily be seen what enormous possibilities for Canada underlie the inauguration of a cheaper process for manufacturing pig iron and steel than is now in use. Ontario is dotted with extensive ore bodies, the development of which is at present prevented by lack of cheap fuel. There is coal in abundance in the eastern and western parts of Canada, but the cost of conveying it to points where coke is needed for smelting purposes is prohibitive. On the other hand, there are a great many waterpowers throughout the Province of Ontario where electricity can be developed and utilized. If the electric system proves to be commercially feasible, we may look for the inflow of a large amount of capital and considerable mining development.

Companies Incorporated.

Canadian Oil Co., Limited, have been granted the right to increase their share capital from $1,000,000 to $1,500,000.

The Gananoque Bolt Co., Limited, have been authorized to transact all matters comprised within the powers of the said company with W. T. Sampson, Gananoque, its attorney.

Canada Radiator Co., Limited, have been authorized to issue one thousand five hundred shares of preferred stock of the company. The board of directors is to consist of seven, as at present.

The Sharples Separator Co., of the State of Pennsylvania, have been granted the right to manufacture and sell centrifugal separators to the extent of $40,000, with C. A. Masten as its attorney.

The York Brick & Cementware Co., Limited, Lambton Mills, share capital $40,000; purpose, to manufacture and sell brick, cementware, etc. The directors are: Wm. Beith, Toronto; R. Weddell, Trenton, and R. Beith, Bowmanville.

Seibert Curtain Pole Co., Limited, Toronto, share capital $20,000; purpose, to manufacture articles made from iron, metal, wood and fibre. The directors are: T. C. Seibert, E. J. Butler, E. Williams, J. Williams, and E. Lewis, all of West Washington, Pa.

Petrolia Torpedoes Co., Limited, of Petrolia, share capital $50,000; purpose, to pursue mining operations for oil, water, gas and other minerals. The directors are: D. Barr, of Dutton, Ont.; W. M. Lowery, of Petrolea, and J. H. Kittermaster, of Sarnia.

Western Construction Co., Limited, of Toronto, share capital $4,000,000; purpose, to carry on a general contracting and construction business. The directors are: A. P. Murray, J. G. Pyke, F. H. Hewitt, P. M. Robertson, and Geo. Smith, all of Montreal, Que.

R. Macfarlane & Co., Limited, of Montreal, share capital $100,000; purpose, to carry on the business of general contractors and builders The directors are: H. D. Smith, of Compton, Que., and R. Macfarlane, F. S. Macfarlane, R. E. Parker, and F. G. Bush, all of Montreal, Que.

Kakabeka Power Co., Limited, Fort William, share capital $2,000,000; purpose to carry on the business of power and electric heating and lighting. The directors are: H. S. Holt, C. R. Hosmer, F. W. Thompson, and H. W. Norton, all of Montreal, Que., and F. H. Phippen, Winnipeg, Man.

The Standard Wire Fence Co., of Woodstock, Limited, Woodstock, share capital $100,000; purpose, to manufacture and deal in all kinds of metal fencing. The directors are: J. L. Hosack, G. H. Cock, and C. Jones, of Woodstock; A. M. Keeney, of Ann Arbor, Mich., and G. Robb, of Windsor.

The Brintnell Adjustable Roller Bearing Co., Limited, Toronto, share capital $100,000; purpose, to manufacture and deal in roller and other bearings and machinery. The directors are A. Nelson, E. H. Adams, A. S. Dewar, A. L. Lougheed, W. H. Scott, C. D. Scott, A. H. Brintnell, and J. E. Cook, all of Toronto.

Banner Oil Co., Limited, Petrolea, share capital $100,000; purpose, to explore for and deal in natural gas and petroleum, and to manufacture and deal in well drilling tools and machinery. The directors are: J. C. Winters, Mount Morris, N.Y.; C. H. Palmer, Rochester, N.Y., and D. S. Robb, London, Ont.

The Stratford Fuel, Ice Cartage & Construction Co., Limited, Stratford, share capital $100,000; purpose, to manufacture and deal in fuel, ice and building and construction material. The directors are: M. Lachlan Leitch, of London, Ont.; W. J. Mooney, C. E. Nasmyth, S. J. Cook, and J. J. Coughlin, all of Stratford.

The Dunnville Mutual Natural Gas Co., Limited, of Dunnville, share capital $15,000; purpose, to construct and operate works for the production and distribution of natural gas for purposes of light, heat and power. The directors are: W. H. Penny, W. E. Traver, C. D. Trimble, G. Reid, and O. E. Willson, all of Dunnville, Ont.

No. 11. OSHAWA, ONT. June 30, 1905

NEVER LATH

Metal Lath had a purposeful origin. If the split board lath of a hundred years ago, or the sawed wood lath of later date, had weathered the vicissitudes of time, there would have been no metal lath. But they **did not.** And while some builders tried to condone wooden laths' ordinary faults, because they **erroneously** thought it was cheap, they could not condone its great fault—its complete **subservience** to **fire.**

WORKED LIKE

Expanded metal lath on the ordinary process came into being with fire prevention as its distinctive feature. It fulfilled this function in a way, but its cost made it practically useless. Our process of manufacturing produced **Perfect Metal Lath** at 10c. per sq. yd.—the necessary article at the necessary price. This process enables us now to turn out 10,000 sq. yds. daily, which product sells the world over.

"PERFECT" LATH

Perfect Metal Laths' excellencies don't stop, however, at triumph over fire and price. It was made specially to lessen labor, facilitate construction, improve buildings and safeguard health. Other metal laths could not prevent rust. **Perfect Metal Lath never** rusts Other metal laths could not hold plaster for an indefinite length of time. **Perfect Metal Laths'** "accurate-to-the-second" mesh **holds plaster** for all time. Other metal laths gave Hardwaremen no chance for profit. **Perfect Metal Lath** gives Hardwaremen **excellent chances** for profit. The opportunity is before **you now.** Buildings everywhere, contractors everywhere. Our inducements are as **good** as the opportunity for **sales.** Decide **to-day.**

BUILDING AND CONSTRUCTION

FIRE LOSSES IN 1904.

THE annual fire waste is a serious problem, for in spite of all precautions that are being taken in modern building construction and the wide adoption of every improvement in the way of fire prevention and fire fighting, the losses from this cause are growing steadily from year to year. In the last calendar year the total fire losses for the United States and Canada, as compiled by the New York Journal of Commerce, reached a larger sum than for any preceding year, with the single exception of that of the great Chicago conflagration, 1871. The aggregate fire waste for the 12 months is figured in excess of a quarter of a billion dollars, the actual amount being 252,364,000. Of course this sum was immensely swollen by the $70,000,000 loss involved in the Baltimore fire of February and also by the $12,500,000 loss in Toronto, Canada, and a serious fire in Rochester, N.Y., which involved a loss of $3,200,000; but, eliminating these three sums, the total of the smaller and moderate fires is still found to be greatly in excess of that of any recent year, being $166,664,000, as compared with $137,365,000, the average for the ten preceding years. The effect of these great losses has been disastrous to the fire insurance business, resulting in the retirement in Baltimore of all but three of the local insurance companies, while a number of smaller companies throughout the country have also given up the struggle during the year. No less than 3,100 fires occurred in 1904, each of which represents an aggregate loss of over $10,000, as against an average of about 2,400 fires of similar range in preceding years. From the fact that these losses represent to a large extent the absolute wiping out of property and wealth it will be seen how serious a drain on the country's resources the annual fire losses represent.

BUILDING NOTES.

W. H. Cooper is to build a $2,000 dwelling at Hamilton.

New machinery is being installed in the brickyards at New Westminster.

Frank Crawford, Hamilton, has been issued a permit for a $2,000 brick residence.

Alterations and additions to be made to the Hamilton Opera House will cost $24,000.

The Traders Bank are to erect a fine new branch bank on the northeast corner of King and Spadina, Toronto.

The Bank of Commerce is placing another branch near the corner of West Queen street and Dunn avenue, Toronto.

Permits issued for three days last week in Toronto were for over 100 houses and other buildings, to cost $296,000.

The Temple Realty Syndicate, of Santa Rosa, Cal., will build a $25,000 store and office building on Pender street, Vancouver

The permit for the erection of the new Roman Catholic church, at Regina, has been granted. It calls for a building valued at $25.000.

The Cockshutt Plow Co. are building a fine warehouse at Regina. It will be of brick, three storeys high, and its dimensions 60 x 100 ft.

Mr. D. G. Macdonell, Vancouver, has taken out a permit for a $4,500 residence, to be erected at the corner of Nelson and Gilford streets.

The William Weld Co., publishers of the Farmers' Advocate, are to erect a three-storey building on Donald street, near Notre Dame avenue, Winnipeg.

The new lumber mill at Terra Nova, N.S., for the Terra Nova Lumber Co., is now nearly completed, and is expected to be in working order by the 24th inst.

Two large permits issued in Montreal are for a store on St. Catharine street, for E. P. Charlton, to cost $30,000, and for the Boys' Home on Mountain street, to cost $20,000.

W. J. McTaggert, Alexander street, Vancouver, has been issued a permit for a $3,000 building. Others who have secured permits for new structures are: A. Duclos, Haro street, $2,000, and E. Burns, Powell street, $3,000.

A large storage building for fire brick is being erected at Sydney, N.S., by Messrs. Falconer & Dixon. The same firm will shortly erect a building near the blast furnaces, to be used as a storehouse and repair shop for that portion of the works.

Work has been commenced on a large business block to be erected for Mr. Bell-Irving, on Granville street, Vancouver. The building will occupy three 25-foot lots, running back 115 feet and will be of brick and iron construction. The total cost will be about $30,000.

J. H. G. Russell, architect, Winnipeg, is advertising for tenders for the erection of an office building for Bulman Bros. The structure will be erected on the site of the firm's building which was destroyed by fire last Winter, at the corner of Bannatyne avenue and Albert street.

The steel bridge over the Pecos River, Tex., is a marvel of mechanical skill and extreme simplicity of construction. It is considerably more than 300 feet in height and is 2,180 feet long yet it is supported by stone pillars so small that it seems incredible to a beholder that they can sustain the enormous weight of passing trains, which invariably stop on the bridge to allow passengers to view the structure and the bleak, desolate surroundings.

One of the most interesting building enterprises recently projected in Salt Lake City involves the erection of twenty-four attractive houses on a block at the crown of First street hill. The idea is to build the rooms in the form of a circle, fronting on a beautiful park in the centre. Opening into this park will be private entrances, so that the public will be excluded and all the pleasures of the place reserved for the occupants of the rooms on the block. The building improvement is estimated to involve an expenditure of not less than $150,000, and it is expected that the enterprise will prove one of the attractions of the city.

It is said that the largest steel flume ever built is at Niagara Falls, on the Canadian side of the river, where the Ontario Power Company has secured rights for the development of 180,000 h.p. The flume in question has a length of 6,180 feet. Its inside diameter is 18 feet, and it will divert 3,900 cubic feet of water from the river above the Horseshoe Falls every second. This flume is so large that it was necessary to establish a temporary shop on the grounds for its construction. It runs through Victoria Park, and is laid in a trench. In order that it may not mar the beauty of the park lands, the great pipe is covered with earth, but before being so concealed was given a jacket of concrete so that there would be no unequal pressure of the earth. The flume is protected against electrolysis. From the water that will flow through this pipe it is expected to develop 60,000 electrical horse-power. Three such flumes will be constructed.

TORONTO BUILDING PERMITS.

E. Sandham, brick dwelling, Avenue road, $5,000.

F. Phillips, two pairs dwellings, Montrose avenue, $5,600.

F. Phillips, one pair dwellings, Montrose avenue, $2,800.

Home for Incurables, brick addition, Dunn avenue, $2,000.

O. C. Hammer, roughcast dwelling, Seaton square, $1,600.

Duncan Donald, stone and brick dwelling, Elm avenue, $4,000.

W. J. Clark, one pair brick dwellings, Dovercourt road, $6,200.

Dominion Paper Box Co., brick stable, King street west, $4,000.

R. Gilday, four pairs roughcast dwellings, Salem avenue, $8,000.

W. E. Booth, stone and brick dwelling, Gibson avenue, $2,500.

James O'Leary, roughcast dwelling, St. Clarens avenue, $1,000.

Angus McMurdy, brick dwellings, Chestnut park road, $5,000.

Arthur Bryce, brick and stone residence, Walker avenue, $3,000.

M. G. Knowles, alterations to studio, 340 Bloor street west, $2,000.

Albert Dale, brick residence, Palmerston avenue boulevard, $4.000.

Henry Larkin, one pair brick dwellings, Delaney crescent, $2,400.

H. H. Suydam, one pair brick dwellings, Madison avenue, $8,000.

W. H. Marks, brick veneered dwelling, 400 Margueretta street, $1,700.

Mrs. Emma Coutie, summer dwelling, frame, Bellfair avenue, $1,800.

Edward Jones, stone and brick dwelling, 39 Dagmar avenue, $2,000.

W. O. McTaggart, one pair brick dwellings, Fern avenue, $3,600.

F. B. Poucher, two pairs brick dwellings, Broadview avenue, $9,000.

S. B. Coon, stone and brick dwelling, Roxborough street west, $3,500.

Love Bros., five detached roughcast dwellings, Grant street, $9,000.

Dominion Paper Box Co., brick factory, King street west, $6,000.

William Simpson, brick and stone dwelling, Seaton square, $1,500.

H. J. & E. R. Reynolds, brick dwelling, 25 Alexander street, $2,800.

T. McNea, one pair brick dwellings, 11 and 13 Verrall avenue, $4,000.

M. L. Hogg, one pair dwellings, 53 and 55 Summerhill avenue, $4,000.

G. E. Vanderburgh, roughcast dwelling, 109 Brooklyn avenue, $1,700.

Wm. Davidson, alterations to dwelling, 146 St. George street, $2,000.

Charles Roberts, one pair roughcast dwellings, Preston avenue, $1,500.

Stone & Huffman, one pair roughcast dwellings, Markham street, $3,000.

F. W. Whimbey, store and dwelling, Peel and Gladstone avenues, $5,000.

L. C. Sheppard & Co., six brick dwellings, Beatrice street, $10,800.

Mrs. C. E. L. Metherall, roughcast dwelling, Lansdowne avenue, $1,000.

T. M. Mallord, two brick dwellings, 562 and 564 Dovercourt road, $5,000.

R. J. Huffman, one pair stone and brick dwellings, Beatrice street, $4,000.

Geo. J. Foy, two pairs stone and brick dwellings, Langley avenue, $8,000.

George Phillips, one pair brick dwellings, 584 and 586 Huron street, $4,000.

A. J. Woodley, one pair brick dwellings, 156 and 158 Davenport road, $5,000.

H. M. Deeth, two pairs stone and brick dwellings, Hepbourne street, $8,500.

C. M. Essery, one pair brick dwellings, 117 and 117½ Mutual street, $4,500.

Robert Lankin, one pair roughcast dwellings, 20 and 22 Brighton avenue, $1,500.

S. J. Graydon, one pair dwellings, corner of Crescent road and Park road, $8,500.

Butler & Barnhardt, one pair stone and brick dwellings, Beatrice street, $5,400.

City Corporation, brick fire hall, corner Queen street and Herbert avenue, $20,000.

Bank of Nova Scotia, brick and stone bank, Dundas street and Brock avenue, $13,000.

J. Lancaster, one pair roughcast dwellings, 624 and 626 Ossington avenue, $3,000.

McArdle & Staunton, one pair and one detached dwelling, 55, 55½ and 57 Fuller street, $6,500.

Kay Bros., one pair roughcast dwellings, Broadview avenue and Elliott street, $3,500.

S. Frank Wilson, warehouse and office building, concrete, 60 and 62 Front street west, $50,000.

IRON MEN MEET.

DURING the past few days the traveling representatives and selling agents of the Montreal Rolling Mills Co. have been in session, the occasion being their annual convention.

The idea of meeting annually for the purpose of conferring on trade matters in general and questions of particular interest has passed the experimental stage and these meetings have proven of much advantage to those participating and at the same time the opportunity of getting in closer touch with one another is much appreciated

Wednesday morning was spent inspecting the main plant of the company, going through the rolling mill, pipe mill, wire mill, wire nail factory, tack works, horseshoe works, horse nail works, lead works, shot tower and cooper shop. In the afternoon, after lunch in the company's dining room, business matters were attended to until the close of the afternoon.

Thursday morning was spent going over St. Patrick street and Mill street works, bolt and nut works, cut nail factory, spike factory, rivet and washer department and the rolling mills connected with these departments. The afternoon was again devoted to business.

Friday, with the kind permission of the Canadian Pacific Railway authorities, a visit was made to the new Angus shops, and in the afternoon the business meetings were brought to a conclusion by a dinner given by the general sales agent, Mr. J. R. Kinghorn.

Owing to the extensive interests of this company a great deal of time is necessary to cover their products in detail, and it is probable the sessions will in future be more lengthy.

Trade reports from all territories were very encouraging and, while the business in the first part of the present year has considerably exceeded that done last year, further increases are looked for.

THE ACT A BOOMERANG.

ACCORDING to the Montreal Gazette, the Act passed at the last session of the Quebec Legislature, imposing a tax of $300 on commercial travelers representing firms outside of Canada doing business in the Province of Quebec, promises to become a boomerang. "Already English travelers who annually have large business transactions with Montreal and Quebec houses, are giving this city the go-by and will in future conduct their business from Ontario centres. It is reported in the news columns that three departed yesterday for Toronto, without attempting to do any business here, in order to avoid a tax which would almost dissipate any profits they might make. The damage which this tax will probably do to many business concerns in Montreal can readily be seen, whereas its purpose is beyond comprehension.

"If Mr. McCorkill, who fathered this interesting enactment, intended it as a revenue producer, his object is frustrated, as might have been expected, for incoming travelers will not pay the license fee. One would rather suppose that a patriotic motive inspired Mr. McCorkill and he desired that this measure should throw the work and the profits of English and American travelers into Canadian hands, but here again is his judgment at fault, for in the language of the commercial men, the Canadian agents 'don't know the goods.' The penalty imposed for each contravention of this Act is from $500 to $1,000.

"Considered from every standpoint, this Act is as futile for obtaining any benefit as the measure at first proposed to tax each resident agency $500 for each foreign firm represented. That would have meant driving those agents from Quebec Province; this means that travelers will henceforth make Toronto or Winnipeg their Mecca, and will give Montreal and Quebec a wide berth. A $300 tax upon travelers upon whom Montreal houses must rely to a great extent, is going to be simply a drag upon trade. The only thing that this Act is calculated to raise is trouble, but a great deal of that."

CANADA'S IRON TRADE

THE total production of steel ingots and castings in Canada in 1904 was 148,784 gross tons, against 181,514 tons in 1903, a decrease of 32,730 tons. Bessemer and open hearth steel ingots and castings were made in each year. Almost all the open hearth steel reported in 1903 and 1904 was made by the basic process. The direct steel castings made in 1904 amounted to 6,505 tons. Canada has not made crucible steel prior to the present year.

The production of Bessemer and open hearth steel rails in 1904 amounted to 36,216 gross tons, against 1,243 tons in 1903; structural shapes, 447 tons, against 1,983 tons in 1903; cut nails made by rolling mills and steel works having cut nail factories connected with their plants, 99,000 kegs of 100 pounds each, against 118,686 kegs in 1903; plates and sheets, 3,102 tons, against 2,450 tons in 1903; all other finished rolled products, excluding muck and scrap bars, blooms, billets, sheet bars and other unfinished forms, 135,243 tons, against 118,541 tons in 1903. The total quantity of all kinds of iron and steel rolled into finished forms in Canada in 1904 amounted to 180,038 tons, against 129,516 tons in 1903. Of the 180,038 tons of finished iron and steel reported for 1904 about 126,850 tons were steel and 53,188 tons were iron.—From the Bulletin of the American Iron and Steel Association.

CONTRACTS AWARDED.

The Canadian Fairbanks Co., Montreal, have, in competition with other manufacturers, been awarded the contract for supplying the transmission material to be used in the Canadian Government Canal Repair Shop at Cornwall. The machinery ordered consists of Fairbanks Universal Giant Hangers, shafting, etc.

The James Smart Mfg. Co., Brockville, have secured the contracts for installing heating and ventilating systems in the Presbyterian church and public school at Blythe, Ont. Kelsey warm air generators will be used.

HARDWAREMEN AT BASEBALL.

On Saturday, 24th instant, teams representing Caverhill, Learmont & Co., and Lewis Bros. & Co., of Montreal, had a friendly game on the former's grounds. Both teams were evenly matched, and the game was interesting throughout. After nine innings were played, Caverhill, Learmont & Co.'s team won out by 28 runs to 20. The umpire was Mr. C. Cormick.

NEW MILO BARN DOOR HANGERS

These are Roller Bearing, with Malleable Iron Frame, Steel Straps and Heavy Bolts.

Sold by

KENNEDY HARDWARE CO.
Toronto

Manufactured by

TAYLOR FORBES CO. Limited

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

MacLEAN PUBLISHING CO., Limited

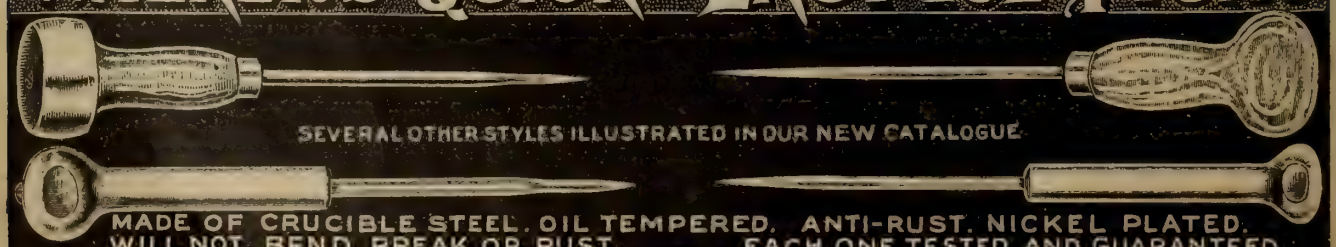
...ESTABLISHED 1849...

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.



Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

The Fisk Detachable Motor Tire

Some of the things that experts say about it :

"Fisk Tires are giving us such excellent satisfaction and are making friends so fast among those who are using them that it will soon be impossible to sell anything else, regardless of what effort the salesmen may make on other tires."

"I recommend them to anyone desiring a tire that is very easy riding, that will stand a great amount of wear, that does not blow off or roll off the rim and, above all, that can be detached and replaced by any one not a tire expert."

"We congratulate you on having in this tire a construction that seems to solve the tire question."

IDEAL COMBINATION COOKER AND BAKER

This cooker should be in every home for its fuel-saving qualities alone. With it you can do as much cooking on one burner of a Gasoline, Gas or Oil Stove as is usually done on three burners.

Saves one third of the food lost by ordinary methods of cooking. Retains all the nutriment of the food. Entire meal of five or six articles may be cooked over one burner on any stove. No scorching. Gives excellent results as a baker as well as a cooker. Ideal Cookers are made of fourteen ounce cold rolled polished copper, tin, or copper nickel-plated, and tinned on the inside. They may be had in eight different sizes at prices ranging from $2.50 upwards.

SUCCESSFUL ADVERTISING

How to Accomplish It

By J. ANGUS MacDONALD

Competent critics have recognized this as the **Best Book on Advertising** yet published. It is a PRACTICAL work for advertisers and business men.

The *Brooklyn Eagle* says of Successful Advertising :

"Advertising is one of the biggest businesses—perhaps the biggest business—in the world. To treat of it comprehensively is as difficult as to treat comprehensively of military strategy or the making of a newspaper. Mr. MacDonald has succeeded. He has produced an admirable and exhaustive monograph.

"Perhaps the deepest pitfall into which an author might fall in writing upon such a subject as this is too much theory and not sufficient practicality. Most happily has Mr. MacDonald avoided this chasm: he writes from practical experience in the field, and his methods as presented have been given the thorough tests of time and circumstances.

"Any one with even a superficial knowledge of advertising cannot but perceive that in the many examples shown are evidenced a thorough knowledge of the subject and a businesslike and practical grasp of advertising which is far removed from the light, airy and entirely impractical and hare-brained stuff which is not uncommon in literature treating of the subject of advertising."

The General Advertiser, The Retail Advertiser, The Advertising Writer, The Mail Order Advertiser will find this work invaluable. The price is out of proportion to its worth. Cloth bound. 400 pages.

Postpaid $2.00 per copy

DIFFICULTIES OF MERCHANDISING

THERE are as many different grades of merchandising as there are different brands of whiskies, and observation has shown conclusively that the quality varies proportionately in both. In fact, if the number of failures be taken as a criterion, it would seem that a very large proportion of the merchants are sadly deficient in their ability to properly and successfully carry on a business enterprise.

Advice and suggestions to prospective merchants, and even to those already engaged in business, are seldom if ever followed. Experience is apparently the only teacher whose instructions are heeded, or at least it is only after one has made the trial which has demonstrated his inefficiency that he realizes the value of suggestions and advice.

The success of some business houses—viewed by employes who more frequently are unfamiliar with the inside workings and therefore ignorant as to whether the large volume of business bears a profit sufficient to cover the ever-increasing expense account in connection with the elements of loss and depreciation which forms a very decided addition to the expense account—has a tendency to cause employes to aspire to merchandising themselves, and in consequence they cut loose from their employers and with little if any experience, inadequate capital and credit, open up in busines and endeavor to compete with their former employers.

Competition Becoming Fiercer.

The old saying, "All is not gold that glitters," exactly covers the situation of merchandising as it should be viewed by the prospective merchant. Because some houses have established a reputation for a large and profitable business does not mean that all can be so successful. Then again it should not be accepted as a fact that all houses who may possibly be doing a large volume of business are realizing profitable returns. There was a time when any merchant could make money, but changed conditions have brought about circumstances which make it very difficult indeed for a merchant to receive satisfactory compensation for the large amount of money invested and for the time and care devoted to the business. Statistics show that business enterprises are constantly increasing, consequently competition is becoming fiercer—at least becoming more general every day. There was a time before railway facilities had been provided and before telegraphy in all its multiplied usefulness had been introduced that the local merchants absolutely controlled the local situation. At that time there were few if any trade papers, which now keep all classes fully posted as to prices and conditions; the local press made no effort at all to keep the trade familiar with such conditions, and in consequence the merchant could ask and obtain almost any price he asked. The customary profit in those times was the Dutchman's 1 per cent. In other words, an article costing $1 would be sold for $2. The expense of doing business many years ago was very small. The public did not awaken to a necessity for modern improvements and such other conveniences that necessitate at the present time such large outlays before a merchant is wholly equipped for business. Living expenses of employes was very much less than at the present time, and in consequence the labor situation did not assume such proportions as it does now.

Hardware Store of Smith & Ferguson Co., Limited, Regina.
Courtesy Regina "Leader."

The effort which is being made by the up-to-date merchants at the present time to meet the changed conditions which modern invention and improvements have brought about calls for a constantly increasing expense account, and when one considers the declining profits which must in some way meet increased expenses, the merchant is asking himself the question, "Where am I at?" The question may arose in the minds of those who are anxious to enter into business, "Why do not the old merchants sell out if they are not obtaining commensurate returns from the time devoted to their business and the capital invested?" Many of them are endeavoring to get out of harness, but the difficulty lies in finding purchasers who will pay them for the amount invested. It is impossible for a merchant to keep his stocks clean and up-to-date without tying up money in unsalable stock. Goods will accumulate and become unsalable, especially at the present time. Styles are constantly changing, and frequently goods will remain on the shelf because of the fact that custom has changed and popular opinion demands some other article or some other style In consequence of this the merchant has on hand an ever-increasing stock of unsalable goods, and it is difficult to find a purchaser who will pay for such goods at anything like their cost.

Training of Employes.

One very serious drawback to the merchandise business is the necesisty of training employes to satisfactorily perform the duties assigned them. Young men who have been trained in the business have an attack of going into business for themselves, and when they leave their employers are compelled to obtain new material and train them for the work for which they are employed. It is quite natural for such training to result in unsatisfactory service, and frequently in actual loss to employers. Experience has shown that a very large part of the employes who enter into business for themselves frequently fail and often go back to their old employers wiser but poorer for the venture. If the loss of the business venture was confined to the parties themselves the damage would not be so great, but while in business they have endeavored to com-

pete with their old employers and with other merchants, frequently at ruinous low prices and at terms both unsatisfactory and unprofitable. The established merchants must of necessity meet the competition of new houses, and when such new concerns are operated by inexperienced and inefficient management the result to all interested can be very well considered.

The Elements of Success.

As has been stated above, there was a time when anyone could make money in merchandising, but changed conditions now bring the merchandise business down to a practically scientific undertaking. The merchant who can conduct his business at the least possible expense consistent with a satisfactory and presentable display, one who has the intruition of selecting the proper employes to assist him in operating his business and who can educate them to the proper character of salesmanship, the one who can command sufficient capital and all the credit necessary to carry a sufficient stock and to take advantage of market conditions in buying goods ahead or in contracting for the same, and who has the tact and the nerve to secure from the manufacturers their best possible terms and prices—is the one who will succeed. The up-to-date merchant should be a student of human nature, should know how to approach the people personally and in an advertising way through newspapers and other advertising mediums, must command the respect of his customers and at the same time have the respect of his employes. It is as necessary for a merchant to carefully select his employes as it is for a general to have able officers under him. A large mercantile business at the present time and epoch has a lifelong campaign to follow up. It is the survival of the fittest in business as in other professions. Many young merchants seem to consider a supply of cash and fair credit is all the equipment they need in entering business. While both these requirements are very valuable in their place, at the same time there are other attributes for the business man which are of even greater importance.

Prospective Merchants' Qualifications

The history of many great men, especially in the commercial world, presents each one's qualifications, and it would be well for prospective merchants to carefully review the experience of these men and profit from their advice and suggestions. It is quite true that it is human nature to aspire to business ventures. Many young men are anxious to become their own boss, and they imagine that this can only be done by their going into business for themselves, and in reality bossing the entire business. Observation will show conclusively that it is not necessary for a young man to enter business to command the respect of his superiors, equals and inferiors. The man who properly and satisfactorily handles a department of any of the great merchants commands not only the highest respect of his employers, but also those working under him. There is always advancement with these lieutenants, and if they are successful in their work their future is assured. A great trouble with the average employe is that he is afraid he will work too hard, that he will put in too many hours, or that he will injure his brain in the interest of his employers. Such labor—for such it is—can never succeed in any undertaking. They overestimate their ability and are constantly seeking the unattainable.

In conclusion, it would be well for all prospective merchants to very thoroughly consider the proposition before going into business. While it is practically impossible to convince such parties that the experience of others would assist them in reaching proper conclusions, yet some good may result by giving such suggestions and advice. There are some facts that can be truthfully substantiated by all successful merchants, that is, that the merchandise business is not a bed of roses, and many of these same merchants will urge young men to refrain from going in business for themselves, but instead to seek responsible positions with established merchants and thus demonstrate their usefulness.

Capital can always be placed to good advantage, and the young man who has a surplus had best invest the same with his employer or in some other enterprise where the security is good and prospects bright for good returns.

A NEW TOOL STEEL.

A CORRESPONDENT in Sheffield has sent Hardware and Metal the following article describing a new process of manufacturing steel invented by a Sheffield workman:

Since the early days of the eighteenth century, when Benjamin Huntsman, of this city, and prominent chemists of other places began to busy themselves with a view to the discovery of improved processes for the manufacture of steel, Sheffield has always been in the forefront of the steel industry. It would be too much even for a loyal Sheffielder to claim that everything good in the way of steel manufacture has originated from Sheffield, but it is impossible to review the history of Sheffield's industrial career and not discover abundance of evidence that the city has been preeminent in the production of chemists famed for their knowledge of the inner mysteries of steel manufacture, and of inventors who have given to the world improvement after improvement which have resulted in the simplification and perfection of the steel industries. Of late years the inventor has striven to produce a steel which would adapt itself to use on machines of much higher cutting speed than were formerly employed. There are in Sheffield at the present moment not a few manufacturers who have achieved very considerable success in this direction, and, without flattering Sheffield unduly, it is quite fair to say that the city has taken a very strong lead indeed in this department of steel manufacture. It is not necessary to deal at any length with the many and excellent descriptions of high-speed tool steel emanating from Sheffield which are at present upon the market, but it is exceedingly interesting to note that a new and important development has recently been made by a Sheffield firm, the Sheffield Steel Makers, Limited. This steel will undoubtedly have an important bearing upon the future of the tool-steel industry, and the firm referred to are to be congratulated upon their achievement.

Not enough attention has hitherto been given to the manufacture of an intermediate quality of rapid-cutting tool steel, which is necessary for the requirements of by far the greater proportion of machinery owners. It may be assumed that of all the tool machinery upon the world's market, not even 5 per cent. is designed for actual high-speed working. However, present-day necessities are more exacting than they were formerly, and the general body of manufacturers, from the smallest to the largest, have become fascinated with the idea held out to them by high-speed tool steel manufacturers of making more of their existing machinery than is possible under present circumstances. This has led to an increased use of the old type of self-hardening steel similar in nature to the original Mushet brand of steel, which has been found in a good many cases to meet nearly all the requirements of the maximum capacity of the machines of current types.

"Unor," as the new steel is called, does not resemble any steel which has been made so far by producers of tool steel, and its characteristics mark it as an entirely new class of material. If any comparisons were made, its cutting and wearing capacities would range between that of the good old type of original Mushet self-hardening steel and the best of the modern high-speed steel.

New Steel's Properties.

"Unor" steel has the property of air hardening, and possessing the capacities already mentioned it will serve equally well for the processes of finishing and of roughing. The treatment required to manufacture tools from steel of this description has established a record for simplicity. All that is necessary to harden it is to heat it to a bright red, and not beyond the "critical point," as is the case with current types of high-speed steel; and to allow it to cool naturally in the air without the use of an air blast. The obviation of the use of an air blast simplifies the process greatly. To anneal "Unor" steel for easy machining all that is required is to heat it to a cherry red, let the heat sink over the fire to a very dark red, and

WIRE NAILS
TACKS
WIRE
Prompt Shipment
The ONTARIO TACK CO.
Limited.
HAMILTON, ONT.

then to plunge it in the water. Experiments have proved that it can be rehardened or softened any number of times, and that the wearing quality of this new tool material does not deteriorate in any way in the course of these processes.

The makers of "Unor" steel are determined to put the material quickly before the engineering world, and arrangements have been made for its manufacture in large quantities. In tests made with twist drills of "Unor" steel at the Sheffield Testing Works, on a railroad tyre made of Cammell's steel of 0.49 per cent. carbon, 49 holes, each 15-32 inch in diameter and 17-18 inch deep, were drilled at an average speed of 25 seconds each. A 13-16 inch drill, made from this steel, drilled 20 holes, 2 inch deep, in 16 1-2 minutes. In both cases the tool used was left in good condition. "Unor" steel does not alone commend itself on account of its extraordinary characteristics, but it will undoubtedly be popular on account of the moderate figure at which it is placed upon the market.

Another Invention.

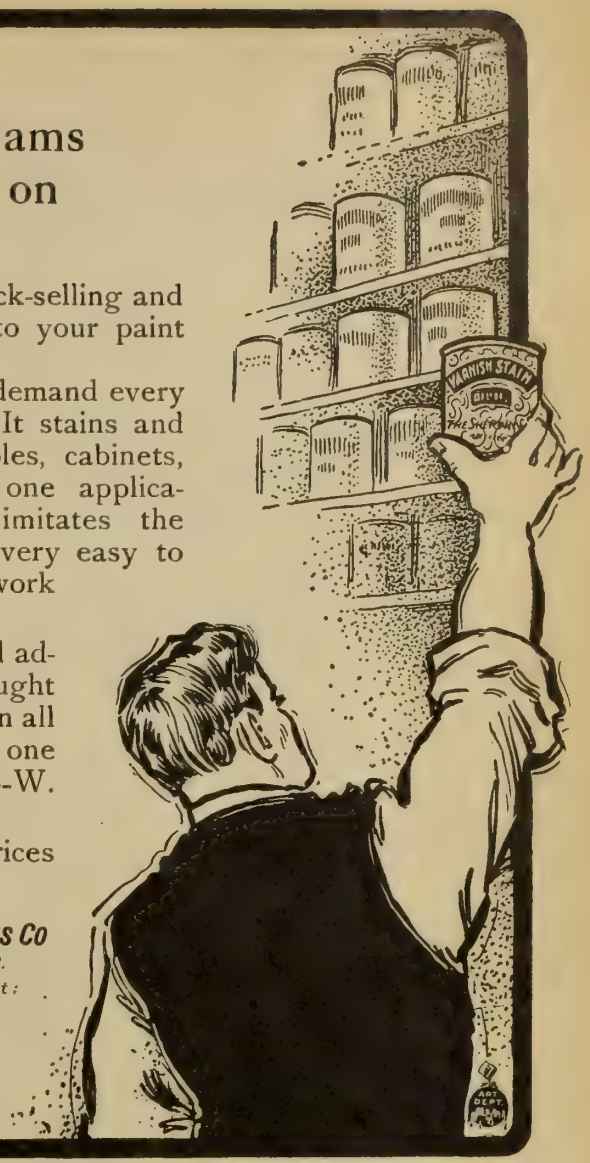
The Sheffield Steel Makers, Limited, will shortly place upon the market another remarkable invention, which is likely to arouse as much curiosity as has already been manifested in the case of "Unor." The material in question is a water-hardening tool steel, capable of maintaining a keen cutting edge longer than anything of the kind hitherto produced. Some pocket knives were shown, the blades of which were made of this material, were whetted up to carry a razor edge, which was tested by shaving the hair from the arm of the gentleman who was kind enough to make the experiment. A large piece of red wood was then brought, and an unmerciful slashing was entered upon with the small blade. Large knots were encountered in the course of the experiment, and everything that could be thought of to test the blade been composed of ordinary steel, a few cuts upon the wood that was used would have brought it to the semblance of a saw, the durability of the blade was done. But on retesting the knife the edge was exactly as at the outset of the experiment, and would have served for the process of shaving.

The steel to all appearance is in itself a paradox. Notwithstanding the fact that it is hard enough to cut glass, it will bend easily. The blade was laid over the edge of an office table, and when hammered with a steel bar, it was bent to an angle of sixty degrees, without breaking. After this the blade was broken in half, and I was shown that the steel would cut glass with the greatest of ease. Every user of steel knows quite well that glass hardness in steel invariably means also brittleness, but this quality has been quite avoided in the case of this new tool steel.

It will be particularly intended for the manufacture of razors, pocket cutlery, circular saws, and tools in general where it is essential that a keen cutting edge should be maintained for the longest possible time. A great number of tests have been made, revealing the astonishing cutting and staying power of this material. Files which have been made from it have been found to wear four times as long as tools made from other kinds of steel.

Put Sherwin-Williams Varnish Stain on Your Shelves

and you'll add a quick-selling and profitable specialty to your paint stock.



Varnish Stain is in demand every month in the year. It stains and varnishes chairs, tables, cabinets, woodwork, etc., by one application. It correctly imitates the natural woods. It's very easy to put on—does good work always.

Varnish Stain is well advertised. It is brought before the consumer in all our advertising. It is one of the leaders in The S-W. Full Line.

Write us today for prices and full particulars.

TREATY WITH JAPAN.

CANADIAN exporters will read with interest the official announcement that Japan has given informal assurances of her willingness to admit Canadian products to the advantage of her minimum customs duties. Steps have already been taken by the Dominion Government to have this carried out.

In 1894 Japan concluded commercial treaties with Great Britain, Germany, Austria-Hungary and France, which entitled specified products of these nations to tariff concessions within the Mikado's domains. The self-governing colonies of Great Britain were privileged to adhere to the treaty if they saw fit within two years. For various reaosns Canada allowed the time to go by, the result being that since the Japanese market opened up Canadian exporters have had to compete at a disadvantage with no less than seventeen foreign countries enjoying tariff preferences extended by Japan under "the most favored nation clause."

The list of articles in which Canadians will be able to compete more favorably directly Canada comes into closer commercial touch with Japan includes condensed and sterilized milk, hops, leather and leather goods, horses, sugar, cottons, woolens, paper, enamelled kitchen-ware, rubber goods, wire and hats and caps. Speaking generally, the minimum tariff rates on these lines will be about two-thirds of what our exporters would have to face in any shipments they attempted to make to the Japanese markets at the present time.

Metallic roofing and siding is a good line to push while building is active. It is naturally a hardware line too, although some neglect it.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

Store Windows.

AN 80-page book about 6x8 inches has been issued by the Sherwin-Williams Paint Co., each page containing valuable suggestions and illustrations indicating easy methods of dressing attractive windows. Below each picture a paragraph explaining the system of dressing is given, the whole making a valuable book for any hardware or paint dealer to have on hand and refer to when it is desired to turn stock into ready money. Mention Hardware and Metal when sending for a copy of the book.

Chain Pipe Wrenches.

Printed matter descriptive of the Champion chain pipe wrench, the Kewanee brass and iron ball joint unions, and of high-pressure boilers, has been sent us by the Lombard Iron Works and Supply Co., Augusta, Georgia. Any steamfitter interested in the latest apparatus in their line should write this company for information, mentioning Hardware and Metal in their letter.

Baker Gun Quarterly.

A 12-page, 11x15 inches, magazine has been sent out by the Baker Gun and Forging Co., Batavia, N.Y., its columns being filled full of useful information regarding Baker guns and general matter of interest to shooters. The paper is issued quarterly and will be sent regularly to hardwaremen who handle sporting goods, providing they mention this paper when writing.

Water Heating Catalogue.

"Modern Methods of Heating water" is the title of a new catalogue received from the J. L. Mott Iron Works, 84 to 90 Beekman street, New York. A transcript from the introduction reads as follows: "An abundant supply of hot water is a modern necessity, of which every building that is occupied requires more or less. This pamphlet is published for the purpose of explaining or suggesting the best and most economical means of obtaining a good supply for any purpose." The pamphlet addresses itself to the illustration and description of the Tobey automatic heaters for live steam, the Efficient for low-pressure steam, Security and Economic for heating water by the injection of steam, and Sunray hot water boiler, and tank heaters. The text is plain and contains many suggestions and much technical matter of interest. The cuts, worthy examples of the engraver's art, show, besides the devices illustrated, several plans of installation. Fine calendered paper and good printing also attract attention. Mention Hardware and Metal when sending for the catalogue.

Gas and Gasoline Engines.

The Duluth Gas Engine Works, Duluth, Minnesota, have issued a neatly gotten up folder illustrating and describing the machinery manufactured by them, comprising belt power, pump jacks, feed mills, stationary motors, portable sawing outfits, marine motors, gasoline launches, etc. Hardware merchants who handle any of these lines will find the folder of interest. Mention Hardware and Metal when writing.

SYDNEY BOARD OF TRADE.

LAST week the annual meeting of the Sydney (N.S.) Board of Trade was held, the attendance being large and the business done chiefly pertaining to local matters. The following extract from the address of President H. H. McCurdy will be of interest, as indicating the progress of the eastern city.

"The turn in the lane has been met and passed. Subsidiary industries to the basic iron and steel are now established. The Dominion Tar & Chemical Co. is already established and doing a large volume of business. The Sydney Cement Co. is ready to begin operations, and a Sydney nail company is organized, and, I hear, is soon to begin construction. The Dominion Iron & Steel Co. is now manufacturing their iron and steel product into finished material. The making of wire rods is an already well established branch of the company's work, and within the past few days the rail mill has been put in operation and is turning out a 25,000-ton contract for the Grand Trunk Pacific Railway. This makes a further step in the industrial advancement of Cape Breton. From this time forward Sydney's progress will be substantial and regular.

"Among the matters which require immediate attention are: The railway freight service to Cape Breton, deepening of St. Peter's Canal, improved postal arrangements, location of industries at the north of the peninsula, development of the oyster fishery, extention of the Cape Breton Railway, conecting the Cape Breton Coal, Iron & Railway Co., Broughton, with Sydney, further reorganization of the Board of Trade, a public landing at the water front, half-hour train service to the colliery towns, local changes for electric light."

A NEW FIRM.

In another column appears the announcement of Messrs. Monteith, Nixon & Co., who have just established a fully-equipped factory at the head of Macdonnell avenue, Toronto, for the manufacture of office, warehouse and factory trucks.

In addition to the ordinary lines of trucks they are prepared to furnish a line of goods not hitherto obtainable in this country, namely, steel-frame trucks, for the use of the heavy hardware trade, and made suitable for handling bar iron and iron pipe. There is a decided opening for these goods in Canada, and our readers will be interested in knowing where their requirements in this line can be supplied.

Both members of the firm have an extensive acquaintance among the hardware trade, and will undoubtedly make a decided success of this new undertaking.

ARTICLE VIII.

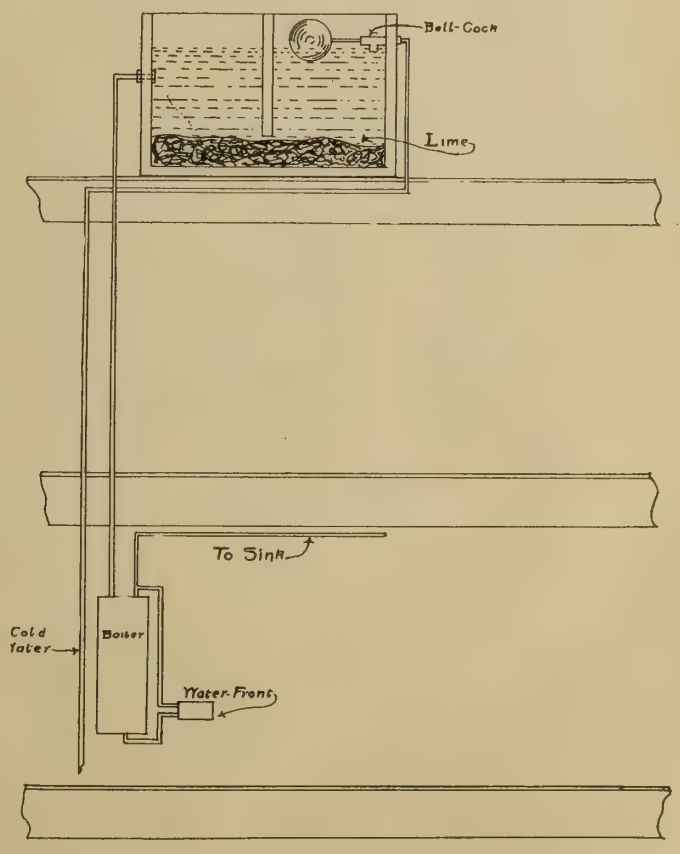
LIME IN HOT-WATER PIPES.

A FRUITFUL source of trouble to both plumber and customers in many parts of this country is the presence in the water used for domestic purposes of large proportions of limestone, which constantly fill up hot-water connections, mainly between the range and kitchen boiler, including the water front.

In some districts the water is so "hard," or, in other words, has such a large percentage of limestone that circulation pipes and water fronts require to be changed every four to six weeks, and, aside from the great expense which these constant renewals entail, there is the ever-present danger of explosion, due to the expansion of any water which may be imprisoned inside the surface, upon which the heat acts directly.

Many plumbers are at a loss to account for the formation of limestone in heating pipes, and are often surprised at the "hardness" of it, and yet the explanation of this peculiar phenomenon is a simple one, the fact being that water in constant contact with limestone wears away millions of small atoms, which, while extremely minute, are nevertheless insoluble, and when raised to a high temperature unite again in their original form, are precipitated and adhere to the sides of the vessel in which the water is contained.

Now, the problem is how to treat the water in such a manner as to either remove from it altogether or render soluble the contained limestone, and the solution of it is so simple that the wonder is that it is not more generally known



In order to overcome the tendency of the limetsone to assume its original condition in hot-water fixtures, it is only necessary that the water be permitted to come into contact with ordinary grey lime, the effect of this being that the atoms of grey lime will unite with those of limestone and make the latter soluble, and, of course, while in that condition they cannot form into a hard mass.

Where a comparatively low pressure on the hot-water fixtures will suffice, the operation of placing the necessary amount of lime in the water is not only very simple, but also cheap, and is very well illustrated in the accompanying sketch.

On reference to the sketch it will be seen that instead of connecting the "cold water" pipe directly to the boiler, it is run to a tank in the attic (which, if desired, may be a large sand barrel), in which, when water works pressure is used is placed a ball cock. In the centre of the tank is placed a partition, extending from the top down to, say, eight or nine inches from the bottom.

The "feed" to the boiler is taken from the opposite side of the tank, at a point a few inches below the water line.

Now, it will be plain that any water passing from the tank to the boiler must move downward, under the centre partition in the tank, and that if grey lime is put all over the bottom of the tank, seven or eight inches deep, that it will have plenty of opportunity of coming in contact with it, and thus taking up the amount necessary to accomplish the object in view.

It will be necessary, of course, to replenish the supply of lime from time to time, and this will depend altogether on the amount of water being consumed.

There will be more or less of the combination of limestone and grey lime deposited in the circulation pipes between the boiler and water front, in the form of mud or sludge, and to remove this three or four pails of water should be drawn off through the cock at the bottom of the boiler say every two weeks, and, indeed, this should be done in the case of every boiler, whether connected as described or otherwise.

It may be objected that the presence of lime in the water would be in some way injurious, but it is well known that lime water, far from being injurious, is quite the reverse, and, indeed, one of the most successful systems of this kind that has come under the notice of the writer was installed in the suburban residence of a physician.

Where it is necessary to have a pressure greater than would be due to "head" obtained by placing the tank in the highest point of the building, it would be necessary to have an iron tank, preferably circular in form, with an

opening in the end or side, of fair size, through which the lime might be introduced.

The opening should be surrounded with a strong reinforcing ring, to which would be fitted a heavy cover, which would be bolted on, the joint between the tank and cover to be made with a gasket.

If a tank of the latter kind is required it would be wise to have the size, weight and strength of material, etc., figured out by a competent boiler maker, because any information of a general character regarding these points, given in an article like this, might, while fitting one case exactly, be far from correct in another, and as in the case of all pressure work, where the materials used are of insufficient strength, disastrous results might follow.

Before concluding it may be well to say a word regarding the easiest method of removing the lime already formed in circulation pipes, water fronts, etc.

Where such a case is to be dealt with, it is simply necessary to immerse the fittings so affected in a bath composed of eight ounces of sulphuric acid to ten quarts of water, when the lime will at once begin to disappear in the form of foam, and the fittings should be left in the bath until they are perfectly clear, then removed and well washed with clear water to remove all traces of the acid.

Respecting the method of treating "hard" water, referred to in this article, it may be stated that there is at least one city in Canada where all of the water used is so treated, and then filtered before being pumped to the reservoir.

THE DISPLAY OF FIXTURES.

MANY dealers who have taken up the sale of bathroom fixtures have been somewhat undecided as to what would make the most effective display. It is not every store that has the room to set apart for an extensive wall display. If a corner can be arranged with the proper imitation tiled background, and over this the fixtures fastened, the result will be very desirable. The customer then has an opportunity of judging of the appearance of certain fixtures if put in the bathroom at home.

Mirrors, towel racks, shower sprays, soap trays, glass holders, etc., can be attached to the wall, while shelves can be utilized to display other fixtures. Bath seats, etc., can be arranged on the floor or in the bath tubs. A little effort along this line will bring ample results, and well repay the plumber for the time spent. A cleanly and neat appearance attracts customers to any shop.

OTTAWA PLUMBING STRIKE.

The Ottawa plumbers' strike is still on. It was caused by a tactical error on the part of the Master Plumbers' Association in not recognizing the collective capacity of the journeymen. The master plumbers are not a unit in their ideas. The original demand was for 32c. per hour, but a compromise of 30c. was effected by two shops making an agreement. As the carpenters get 30c., and the bricklayers secured an advance without friction, there is considerable reason for conciliating the journeymen.

PLUMBING GOSSIP.

Taylor-Forbes Co., Limited, are to open showrooms in Toronto. Announcement will be made next week.

N. Blumbergh, 353 College street, Toronto, has put in a new store front and improved his premises greatly.

G. C. Caldwell, Buffalo, representing the Mueller Mfg. Co., Decatur, Ill., is calling on the trade throughout Ontario.

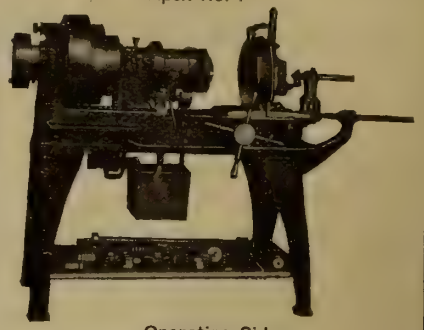
John Gunn & Son, ironmongers, of Edinburgh, Scotland, have retired from business, the principals having emigrated to Canada.

The James Robertson Co. are altering their plumbing showrooms in Toronto and have secured a permit to erect a marble cutting house to cost $3,000.

Active preparations are being made by the Winnipeg Association to entertain the visiting plumbers who attend the convention in the Prairie City next month.

Toronto Master Plumbers are preparing to entertain their Buffalo confreres at Hanlan's Point some Thursday or Friday in August. A seven-foot porcelain bath will be utilized as a punch bowl.

The Ontario Lead & Wire Co., Limited, are rushing to completion their new offices and plumbing showrooms on Richmond and Church streets, Toronto. They expect to occupy the new offices in about three weeks.



Journeymen and Master Plumbers in Toronto will discuss the "strike" problem on Saturday when a baseball match will be played at the Woodbine. The two factions are expected to be at "lager" heads after the game.

The convention of plumbing manufacturers and supply men at Detroit last week was largely attended by delegates from all parts of America. Besides the Toronto representatives, manufacturers in London, Goderich and Guelph were present to look after Canadian interests.

A picnic without a basket! That's something unheard of, but it's going to happen on Friday, July 21, when the Toronto Master Plumbers' Association entertain their wives, lady friends and children at Lorne Park. When plumbers set out to do a thing it can be taken for granted that it will be done well, and the committee appointed to arrange the details, Messrs. G. Clapperton, D. J. Morgan, J. E. Fullerton, K. J. Allison, W. J. Mason and W. Benson, are a guarantee of a first-class time. Besides a ball match between the association men and a team representing the manufacturers, there will be bowling on the green between the association team and the Lorne Park Club. Races and other sports will also be provided. A special train will leave the Union Station at 9.45 a.m. for Lorne Park, and the association is specially inviting the ladies and children. That the day will be enjoyed by them without the labor attending the ordinary picnic, the committee will provide dinner and supper themselves. Baskets are barred, as this is the ladies' special day. The return trip will be made at 8 p.m. by train.

THE MERRELL NIPPLE and PIPE MILL MACHINES

Apex No. 1

Operating Side

The head has our standard adjustable quick-opening and closing dies, actuated by a cam movement, controlled by a segment of a gear, and is arranged so that it can be fed up to the vise for handling short pieces of pipe. This machine is especially adapted for making nipples.

THE CANADA METAL COMPANY

WILLIAM STREET, - TORONTO

Plumbing Markets

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 7, 1905.

BUSINESS is going along well. In fact one of the largest Montreal houses stated that their midsummer decline had not even hinted at arrival. They had not seen business so good for the time of year for a long time. Even the strike of the carpenters had not hindered the plumbing trade, and supplies were being ordered freely from all parts. Far from getting practical sympathy from the plumbers' union, there seems to be a lack of sympathy, inasmuch as nearly all the plumbers are masters themselves and are more likely to be responsive to the wishes of the contractors.

In addition to the building activity, there is a marked liveliness among the repairing houses, such as large buildings having their whole heating apparatus changed and private houses doing similar acts while the family are at the seaside, etc. Thus the plumbers have their hands full. As far as contracts go, there is work enough ahead for a year. Hence the supply houses are jubilant and anticipate now that there may be no let up during the Summer months, as was expected.

Range Boilers — Good demand and prices are steady. We quote as follows: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net: copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—There has been no change in price, but the demand is excellent, and prices are firm. We quote as follows: Discount 30 and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra.; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—All piping is firm, and the demand continues first rate. We quote as follows: Discount on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—Manufacturers are working hard to keep up with orders, and it is current news that many orders are booked ahead. A fine business is likely to continue. Our quotations are as follows: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe. 1-4 inch, 62 1-2 per cent.; 3-8 inch, 62 1-2 per cent.; 1-2 inch, 72 1-2 per cent.; 3-4 inch, and upwards, 74 1-2 per cent. Discounts on galvanized pipe: 1-4 inch. 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 62 per cent.; 3-4 inch and upwards, 64 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30,00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanised, 61 per cent.

Soil Pipe and Fittings—Slight fluctuations have taken place owing to the heavy demand, but the old rates remain. We quote as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list. Medium and extra heavy soil pipe 60 per cent. off. Fittings 60 per cent. off.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, July 7, 1905.

IN saying that business is active we do not describe the conditions existing at all thoroughly. Things are very active, and every branch of the trade is participating in the rush. Very satisfactory bookings from city and rural customers are backed by carload orders from jobbers in Western Canada. Indications are, also, that there will be a steady increase, and some of the supply houses are wondering how they will handle the Fall trade.

New lists have been delayed, and may not be in the hands of buyers for another week or ten days. We have already intimated that lower prices are probable on brass and copper goods, as well as one or two other lines. It will pay our readers to follow these market reports closely.

Lead Pipe—Large quantities are being purchased to fill the needs of new building work. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 30 and 5 per cent.

Soil Pipe and Fittings—Requirements for contract work are heavy, and sales are, therefore, large. Prices are unchanged. We quote as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—Call for goods is strong. Prices have not been shaded as yet. We quote: Malleable fittings 20 to 25 per cent. for American and 35 per cent. for Canadian; cast iron (standard), bushings, 65 per cent.; headers, 60 per cent.; flanged, unions, 60 per cent.; lipped unions, 60 and 5 per cent.; malleable bushings, 60 per cent.; nipples up to 6 inch inclusive, 75 per cent.

Copper Range Boilers—No change is noted, demand continuing active. The discount of 15 per cent. continues.

Galvanized Iron Range Boilers—Volume of business being done is reported to be large, with prices the same. Our quotations are as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallons, standard, $6; extra heavy $8.50; 40 gallons, standard, $7; extra heavy, $9.50; 52 gallons, standard, $11; extra heavy, $14; 66 gallons, standard, $18; extra heavy, $20; 82 gallons, standard, $21; extra heavy, $24; 100 gallons, standard, $29; extra heavy, $34; 120 gallons, standard, $34; extra heavy, $40; 144 gallons, standard, $47; extra heavy, $55.

Iron Pipe—Steady buying at unchanged prices is reported by the supply houses. We still quote: Black, 1-4 inch, $2.03; 3-8 inch, $2.06; 1-2 inch, $2.29; 3-4 inch, $2.87; 1 inch, $4.12; 1 1-4 inch, $5.62; 1 1-2 inch, $6.75; 2 inch, $9. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.14; 3-4 inch, $4.02; 1 inch, $5.77; 1 1-4 inch, $7.87; 1 1-2 inch, $9.45; 2 inch, $12.60.

Solder—Large quantities are being used on contract work, and buying is active. We quote: Bar solder, half and half, guaranteed, 18c.; wiping solder at 16 1-2 to 17c., and refined 17c.

Enameled Ware—Buying is reported active, the call for goods being very strong. Prices are the same. We quote as follows: Baths, rolled rim, 5 feet, 2 1-2 inch rim, 1st quality, $17.50, special, $15.50; 3 inch rim, 1st quality, $19.00, special, $17.00; 5 1-2 feet, 2 1-2 inch rim, 1st quality, $19.00, special, $17.00; 3 inch rim, 1st quality, $20.50, special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.45; special, $2.

NEW VULCAN CHAIN PIPE VISE.

THE new Vulcan Chain Pipe Vise, which has just been put on the market, is being handled in Canada by the Canadian Fairbanks Co., Limited. This vise offers many advantages over the ordinary pipe vise in use at the present day. There are few parts about it, and is practically unbreakable. It is convenient to be carried in the hand or tool bag, and requires very little space on the bench or post. Its weight is 10 lbs., and when folded measures 6 x 8 x 8. The action is infinitely more rapid than any other vise on the market. A quick pitch screw on one side and chain-pockets on the other are novel speedy adjustments. A quarter inch of chain-drop, or a quarter turn of screw, and the strength of a child will do the work. The grip is positive and non-crushing, and is always renewable by simply filing the teeth. The chain hugs the pipe half way round. The material used in this pipe vise is all wrought steel, drop forged saw-tempered jaws, hand-made vulcan pipe wrench chains, and all parts are interchangeable.

Interested readers can obtain any further information or pamphlets describing this from the Canadian Fairbanks Co., Montreal.

IDEAL
Woven Wire Fencing

MAKES MONEY FOR YOU

Your customer, the farmer, wants a fence that can be put up quickly and easily just when he wants it. Hand made fences cost too much when you figure the time it takes to build them, to say nothing of the hard work.

Why not sell "The Ideal," the best woven wire fence made? You can build up a permanent trade that will pay you as much as any line you are handling. Other hardware merchants are doing it. Why not you? The Ideal will give satisfaction to your customer and make him your friend.

Have you seen the Ideal? Let us send you a sample and catalogue showing why Ideal fence made from No. 9 hard steel wire throughout is the strongest and the best value.

Ask us about the Ideal all metal farm gate.

BROKEN GUN BARRELS.

MANUFACTURERS and jobbers of firearms frequently have guns and rifles returned with broken barrels. In nine cases out of ten, the fault is not the makers,' but carelessness on the part of the user.

A frequent cause of barrels bursting is an obstruction of some kind being in the barrel at the time the gun is fired. This obstruction might only consist of clay or sand, a wad, or even water would be sufficient to cause the barrel to break.

Where barrels burst through being fired with obstruction in them, a smooth round ring will be found at the bursting point, running entirely around the barrel. Sometimes the swelling shows a crack on one side, or the barrel may be torn off either above or below the swelled point.

The improper use of smokeless powder will often break a barrel. When the charge detonates the barrel opens at the chamber where the cartridge lies. It might be said here that smokeless powder should only be loaded by those who thoroughly understand the work.

The moment an expert sees a broken barrel he can tell whether it has had proper use or not, and the cause of the break.

All the standard makers give the guns and rifles such a rigid inspection, that the man who keeps his gun well oiled and cleaned, (if it is a reliable make) will have little or no trouble with broken barrels.

THE B.C. RAILWAY WAR.

VERY keen interest is being displayed in the Province of British Columbia in the fight being made by the V. V. & E. Ry. Co., which is practically the Great Northern, to secure amendments to the charter in the Dominion House. Importance attaches to the progress of the negotiations because on the result in large measure depends the immediate opening of the Similkameen district and its being placed in direct touch with the coast section of the province by means of the line which will be built. The fact that at first the connection will not be direct, but by means of connections with the Hill system in Washington State, has had some adverse influence, but the desire to see rapid development of this rich and favorably located portion of the province has predominated.

The opening of the Nicola Lake section, the northern portion of the Similkameen district, by the building of the line of railway from Spence's Bridge on the main line of the C.P.R. to the head of Nicola Lake, has doubled the impetus the district has received from the prospect of transportation being supplied. Many people are making their way into the district, and the rapidity of its development promises to equal that which opened the Kootenays in the early days of Rossland. Like the Rossland district the Similkameen is being taken stock of by the progressive western American cousins. They are to be met with in large numbers, and as none know a good thing better than they, there is every assurance that Brother Jonathan is going to be a lively competitor with Jack Canuck for the riches that are part of the Canadian cousin's birthright, but which he may lose to the smart Yankee cousin, as he did in the Kootenay and in the Yukon. Pessimism has no place in western philosophy. The above remark is plain statement of hard fact. See how much the future will bear out the statement.

MANUFACTURERS' EXCURSION.

In the list of names given on another page of hardwaremen taking in the Canadian Manufacturers' Excursion to England there are several inaccuracies. Messrs. E. C. Boeckh, H. T. Bush, B. A. C. Craig, T. S. Depwe, E. W. Fleury, J. O. Galligan, J. A. Halstead, R. Harmer, Jas. Maxwell, A. S. Rogers, J. T. Sheridan, and W. P. Thomson intended to go but did not, while Messrs. B. F. Ackerman, Peterboro; Geo. Caverhill, Montreal; R. B. Emerson, St. John; E. B. Fletcher, Toronto; W. K. George, Toronto; Geo. Gillies, Toronto; Walter Grose, Montreal; F. W. Lamplough, Montreal; Thos. McFarlane, Smith's Falls; J. K. Osborne and N. Shenstone, Toronto, and J. Wildman, Winnipeg, all connected with industries allied to the hardware trade, are members of the excursion party.

MORE BENEDICTS.

There seems to be an epidemic of benedicts in Lewis Bros., Limited, as this week two more members of the staff were married.

Mr. W. O. Labelle, one of their Ontario men residing at Bowmanville was married to Miss Florence M. Burton, of Toronto. The wedding took place at Toronto, and Mr. and Mrs. Labelle will reside at Bowmanville.

Mr. Arthur Halford, of the shipping room of the same company, was married during the week.

Both were recipients of presents from the company and staff.

A REGINA HEATING CONTRACT.

The "Leader," Walter Scott's paper in Regina, is building a new block in which it will soon be established. The contract for heating the building was awarded to the Smith & Fergusson Hardware Co., Limited, by the architect in charge, W. H. Wilton. The Pease-Waldon Co., Limited, of Winnipeg, are supplying the materials; the contract calls for one of their "Florence" steam boilers.

MACHINE COMPANY MOVES.

The Jenckes Machine Co., of Sherbrooke, Que., will move their plant to St. Catharines and employ at least 100 hands to start with. The city gives them a free site and agree to pay a portion of the power they use for a term of years. In Sherbrooke, the Jenckes company had no room to extend their growing business, and railway facilities were poor. In St. Catharines they will be more central.

AN IMPORTANT CASE.

The Magnolia Metal Co., Limited, Montreal, have brought suit through Messrs. Foster, Martin, Mann & McKinnon, against the Syracuse Smelting Works. The plaintiff claims $10,000 damages, on the ground that the defendant is selling an inferior compound under a trade mark that is an infringement of plaintiff's patent.

There Are Numerous Personal Advantages to You

IN HANDLING THE

NATURO Closet and Seat

You will have something entirely new that will interest everybody in your town and is sure to bring trade to your store.

These facts alone will appeal forcibly to your customers :

The NATURO Closet is built low from the ground, the front being slightly elevated, making it more convenient to children and necessitating a position more healthy to the user.

The NATURO Seat is so made that the wet floor and other unsafe features so common in other closets are impossible.

We advertise extensively and refer all inquiries from his locality to the plumber handling the NATURO Combination. Thus, the business of every such plumber gets advertised considerably without cost to himself.

Put a sample in your showroom and prove this for yourself.

DON'T HEAT THE CHIMNEY

There is a certain amount of heat in a given amount of coal. The problem is to use the heat instead of wasting it, instead of sending it up the chimney.

The Oxford Boiler

lets very little heat escape. Walls of fire-pot slant inward over the fire, flues of the large lower water section are bell shaped and throughout its entire upward course the heat is forced to impinge itself on surfaces that absorb and use it through the medium of hot water.

Oxford Boilers never leak. Steel Push Nipples join the sections, metal to metal, and obviate the necessity of rubber gaskets.

Let us demonstrate to you in detail by our free book why the Oxford Boiler is the most perfect domestic heat generator made.

REGARDING COMPLAINTS.

WE are anxious that our subscribers as far as possible should receive copies of Hardware and Metal on Saturday. The paper is mailed every Friday and all subscribers between Windsor, Ont., and Quebec City, and as far north as North Bay, should receive their paper on Saturday.

We would like any of our subscribers in this district who do not receive their paper till Monday to enter a formal complaint with the postal authorities. We do this ourselves when we find the paper has not been received, but our case would be much stronger if our subscribers would take the trouble to write the deputy postmaster-general at Ottawa.

A SUCCESSFUL CONVENTION.

IN view of the full account which appears elsewhere in this issue of the convention held in Regina last week by the Associated Boards of Trade of the Northwest Territories, it is unnecessary to make extended editorial reference to it. Our readers can form their own conclusions from the report. Its length is justified by the importance of the gathering, the personnel of the convention, which was composed of the best business men of the west, and the nature of the topics discussed. The functions of such a convention are purely advisory, but they are rash politicians and legislators who think they can afford to ignore the soberly-expressed opinions of representative business men who feel the responsibility of all their utterances. The Legislatures of the new provinces will, if they are wise, pay serious heed to the various pronouncements of the convention.

One suggestion we desire to make to the Executive. The bill of fare this year was too long and the delegates were not given sufficient notice of the subjects which were to come up for discussion. This should be remedied next year by insisting strictly that the various boards should submit their resolutions at least a month in advance, in order that copies may be distributed before the convention.

A noticeable feature of the convention was the popularity of the principle of Government ownership of public utilities. Opinions may well be divided as to the wisdom of the policy, but if these business men who were delegates to the convention represent the sentiment of the business men of their communities—and there is no reason to doubt that they do—the west is strongly in favor of public ownership. It is a significant sign of the times.

At one time it seemed likely that the convention would decide to separate into two distinct provincial bodies, but what we feel was the wiser policy ultimately prevailed, and a strong united association was formed to be known as the "Associated Boards of Trade of Western Canada." A bright future seems to be in store for this organization and we do not doubt but that it will have a powerful influence in moulding the legislation of the Provinces of Alberta and Saskatchewan.

PULL DOWN THE FENCES.

IN these days when benevolence and philanthropy are talked about so much and when thousands of dollars are being spent to provide fresh air and amusements for the poor, it is surprising to find how many simple means of attaining these ends are being overlooked. It would appear that nothing is worth doing unless it costs money.

In passing through any city or town, one is always sure to notice a great deal of vacant property. In a few cases this property stands bare and open to the public and forms a splendid playground for the children. But in most cases it will be found that the vacant property is fenced in and guarded from intrusion by such familiar notices as "Trespassing strictly prohibited." Why should this be so? Will the value of the property be diminished if the fences are pulled down, the signs burned and free access given to the public?

We would urge the philanthropically-inclined aldermen of our cities and towns to turn their attention in this direction. It is all well enough for them to appropriate thousands of dollars for purchasing and maintaining parks. But the same object could be secured in some measure in a much cheaper way by compelling the owners of vacant property lying useless to tear down their fences and allow the public to enter. The same restrictions which prevent rowdyism and abuses in the public parks could as easily be enforced in these vacant lots and proprietors be safeguarded from the destruction of their property.

No one can minimize the importance of fresh air and breathing space in the lives of our children, and the children of the poor should receive as much consideration as the children of the rich from the authorities. In their interest we advocate this measure.

PRICE-CUTTING WAR ON.

IF peace is not arranged during the next few days, the price cutting in plumbing supplies, which is now the feature of the market in Toronto, is almost certain to result in a war between the jobbers in the Central Supply Association and those on the outside.

The story leading up to this situation is an interesting one. A west-end plumber, who has been fighting the Master Plumbers' Association for a long time, has been doing a jobbing business on a small scale. He recently secured the backing of a wealthy hotel man and, it is said, of a large wholesale hardware firm, the combination taking over the brass works at Port Colborne and reorganizing it under the name of the Monarch Brass Co. Then the plumber transferred his plumbing business to his brother and made application for membership in the Supply Association, but, owing to his past record, his application was refused. The Master Plumbers' Association, however, accepted the brother as a member and added the new jobber to its list of supply houses with whom the members could do business. This, it is understood, was done under the belief that the Supply Association had taken the new jobber into its membership.

Taking advantage of the stragetic position in which he found himself, the west-ender commenced to slash prices and is now said to be selling brass goods, etc., below the price which the supply houses can buy at. Goods which cost them $1.80 wholesale he is selling at $1.75 retail, although it is said the goods are not up to standard. The situation is naturally demoralizing to trade, and the older supply houses in order to live must protect themselves

from the unfair competition of the new man. If the latter is determined to fight and those backing him are willing to risk their money, there will be war to the knife and prices will be cut down to a figure where there will be no money in it for any one but the buying public, and so far as the jobbers are concerned the contest will resolve itself into a mere test of financial endurance.

Anything which tends to disturb the peaceful trend of trade and to encourage bitter strife is regrettable, but circumstances often arise which compel business men, as well as nations, to resort to extreme measures. Before carrying the warfare too far, it would be good policy for the new supply men to make terms with their competitors, as the results of a price-cutting war are likely to be more severely felt by them than by the older-established houses.

QUEBEC'S COMMERCIAL TAX.

MUCH misunderstanding and unfavorable comment is resulting from the recently adopted law assessing travelers of foreign houses doing business in the Province of Quebec the sum of $300 annually. A large number of Canadian manufacturers and wholesalers are, according to Mr. J. F. Stewart, of the Manufacturers' Association, still under the impression that the tax applies to them. As has been pointed out in these columns, a strict reading of the wording of the Act would consider residents of other provinces in Canada to be foreigners in Quebec, but the Quebec law-makers are not interpretating the Act so closely, and Canadians are, therefore, not liable to the tax as it is being at present enforced. In this respect, Quebec is more friendly to her sister provinces than British Columbia, whose tax of $50 semi-annually is imposed on Canadians as well as "foreigners."

In the United States the impression also seems to be held by many that the new law is a piece of Dominion legislation. An item emanating from the Boston News Bureau, headed "Canada's New Business Tax," is being copied extensively throughout the east. It reads as follows:

"Boston commercial travelers en route from Toronto to Montreal were surprised to learn that if they went farther east they would be subject to a new tax of $300 as representatives of commercial houses having no place of business in Canada.

"The law became effective Wednesday last and the penalty is very severe; ranging from $500 to $1,000. The Boston men immediately returned home after notifying their customers in the Province of Quebec that they must send their orders direct to the home office or arrange a meeting at Toronto or elsewhere in Ontario."

The feeling of American commercial men on the subject can be judged by an extract from a letter sent by a large association of manufacturers in the United States to the Canadian Manufacturers' Association, as follows:

"This would appear to be a matter for Dominion legislation, and not for that of a province, seeing that it is to some extent an interference with international trade. It is conceivable that if it is constitutionally correct for one province to pass legislation of this kind others could do the same, and might perhaps place the license at so high a figure as to absolutely prevent any traveler from Europe or the States soliciting business in Canada, if that should be the object."

Little has been heard from Great Britain as yet, but it is certain that the commercial press there will strongly condemn Quebec's action as tending to destroy imperialistic sentiment and as being altogether out of harmony with the friendly commercial feeling between Canada and the Mother Country, which has been developed during the past few years.

As stated last week, it seems likely that the Quebec legislators will find the Act to be a boomerang, and on account of the loss of trade will find it necessary to reduce the amount of the tax or abolish it altogether.

AMBITIOUS SASKATOON.

THE rivalry of Calgary and Edmonton and the dispute as to the capital of the new Province of Alberta have been given considerable prominence in all parts of Canada, but it is not so well known that Saskatoon has ambitions to be capital of Saskatchewan, an honor which Regina considers rightly hers as the old Territorial capital. Saskatoon is ambitious, and in the language of the sporting fraternity, is determined to give Regina "a run for her money." When it was found that the celebration in Regina, which had been set for Dominion Day in honor of the creation of the twin provinces, had to be postponed because of the delay in passing the Autonomy Bills, Saskatoon citizens decided upon an enterprising step. The delegates and press representatives at the Board of Trade convention at Regina were invited to visit Saskatoon on Dominion Day, attend a banquet that night and remain over until Monday for the Dominion Day celebration. A special train was provided for the accommodation of the guests and everything possible was done to provide for their comfort, the object being to show the business men of the west what manner of place is the enterprising town which aspires to be capital of Saskatchewan. Without expressing any opinion as to the respective merits of Regina and Saskatoon, we must at least pay our tribute to the enterprise of the ambitious new aspirant for capital honors.

PNEUMATIC TOOL DEAL.

TARIFF duties have again influenced a large business deal of great interest to Canada. This time it has caused the Canadian Pneumatic Tool Co. to be purchased outright by the Chicago Pneumatic Tool Co., Limited. The Canadian Pneumatic Tool Co. has been carried on for some time in Montreal under the direction of N. J. Holden & Co., and they were carrying on a large business which had steadily grown since its inception. On the other hand, the Chicago concern has been hampered in its work in Canada by the onerous customs duty which was levied upon its goods. The purchase of the Canadian company's capital stock was consummated some days ago, and the full possession will be made in the course of this month. The amount of money involved has been exaggerated in the papers owing to the dispatches from New York, which quoted $600,000 as the sum. The correct sum as stated by Mr. Holden, the president and general manager here, should read $60,000. He also stated that there would merely be an enlargement of the business formerly carried on inasmuch as all tools sold would be manufactured here, and that the same management would be retained as was formerly embraced in the Canadian company.

The news was first given out at the annual meeting of the Chicago company, which was held at New York last week. The Chicago Pneumatic Tool Co. has recently been branching out in their own country, for it is only a short time ago that they purchased control of the Philadelphia Pneumatic Tool Co. and the Chicago Storage Battery Co.

This only tends to indicate the way business interests are concentrating upon the Canadian market, and further that if the large American manufacturers intend to compete they must establish factories within the domain of the Dominion. Only a short time ago the American Axe & Tool Co., which had an office and wareroom in Montreal, was compelled to close because of the customs duty on their goods. Recently the Canadian Fairbanks Co., Limited, was organized, all of which goes to show that Canada is forging ahead and that the prosperity of the country and the energy of the people is inviting capital from the land of the dollar. There is no disparagement in saying that Uncle Sam's manufacturers are watching the Canadian market carefully and the dumping clause in the tariff of Mr. Fielding has had a frustrate effect upon the local manufacturing and the watchword "Made in Canada."

Second Convention of the Associated Boards of Trade of the Northwest Territories

Held at Regina, June 29th and 30th

IN attendance and enthusiasm, in the amount of trained intelligence brought to bear upon public questions, in the quality of its members and their serious determination to deal with business questions in a serious, business-like way, the convention of the Associated Boards of Trade of the Northwest Territories, held in Regina during the last two days in June, was a pronounced success. The delegates were serious business men and, for the most part, they settled down to the work of the convention in a business-like way. It is true that two or three men had

their hobbies to ride and their fads to exploit, but, upon the whole, the discussion was intensely practical. These men are the leaders in their respective communities and one cannot help feeling that the future of Western Canada is assured while its affairs are under the control and guidance of the shrewd, capable, practical, and withal high-minded men who were delegates to this convention. Canada is a young man's country, and that this is particularly true of the west was evidenced by the personnel of this representative gathering of business men. The average delegate was in his thirties, if one may judge from appearances, and there were a few still in their twenties. Clean-shaven, aggressive, well-built, athletic-looking men, these residents of the western towns show themselves men well able to grapple with any problem, no matter how difficult. It is not hard to understand the secret of the rapid growth of the western towns when one has seen their business men.

History of the Convention.

The Associated Boards of Trade of the Northwest Territories are a young organization, this being only their second convention. Early in January of 1904 the Calgary Board of Trade, through their secretary, sent out a circular letter to the various Boards of Trade of the Northwest Territories suggesting a general convention. The suggestion met with favor and a convention was held in Calgary on June 15 and 16, which was attended by 68 delegates representing 29 Boards of Trade. It was then decided to hold another convention in Regina in 1905, but the question of permanent organization was left over for decision this year. The following resolution was also passed at the same convention:

"That at future conventions, Manitoba and British Columbia be represented by invited delegates who shall have the privilege of making motions and amendments and of taking part in debate, but not of exercising voting powers."

Accordingly, President A. L. Johnson, of the Winnipeg Board of Trade, was present the first day and took an active part in the discussions.

At one time there was a danger that the convention would split up into two bodies, one for each of the two new Provinces of Alberta and Saskatchewan. Division found a number of ardent champions who argued that the distances were too great in the new provinces to allow delegates from all boards to attend conventions. It was also urged that the main function of the convention was to influence legislation and that accordingly the political division of the Territories into two provinces rendered necessary a similar division of the convention. In the end, the champions of a united convention for the two provinces carried the day, the speech of Premier Haultain at the Thursday night banquet, in which he strongly counselled unity in spite of imaginary lines dividing the

west, probably having a great deal to do with the result. A permanent organization was decided upon the name chosen being "The Associated Boards of Trade of Western Canada." The Executive hope to have large representation at the next convention from the Provinces of Manitoba and British Columbia.

The citizens of Regina made every effort to entertain the delegates, and the two days of the convention were one continual round of business and pleasure. On the afternoon of the first day the ladies of the city entertained the delegates at a garden party in the city park, and that same night, after a long session of the convention, the delegates were the guests of the Regina Board of Trade at a highly successful dinner held in the Windsor Hotel. Friday evening his Honor the Lieutenant-Governor and Madame Forget entertained at a garden party in the Government House grounds.

The List of Delegates.

The following is the list of registered and duly accredited delegates:

C. B. Murphy, Moosomin.

G. R. Tinning, E. P. McNeil and H. M. Stewart, Macleod.

Hon. Mr. Justice McGuire, Prince Albert.

George W. Green, A. E. Moore and Jesse W. Knight, Raymond.

E. Michener and G. A. Love, Red Deer.

H. F. Mytton, H. W. Laird, J. F. Bole, L. T. McDonald and Ald. McAra, Regina.

Dr. Willoughby, Frank R. Oliver, Thomas Copeland, A. E. St. Laurent and J. Clinskill, M.L.A., Saskatoon.

Mayor A. Davies and Dr. McIntyre, Strathcona.

H. G. Dawson and John Kidd, Wapella.

T. H. Blacklock, Jos. Mergeus and Oliver S. Black, Weykum.

R. A. Magee and G. H. Hurlburt, Wolseley.

A. L. Johnson and C. N. Bell, Winnipeg.

OPENING SESSION.

The convention opened on Thursday morning, June 29th, in the Court House, President Thomas Tweed, of Medicine Hat, presiding. The court room was handsomely decorated with flags, bunting and flowers.

President's Address.

President Tweed gave expression to the pleasure which it afforded him to welcome the delegates to the annual convention. The large attendance was the best evidence of the interest taken in the convention by the various Boards of Trade throughout the west, and proved conclusively the wisdom of the City of Calgary in starting the movement last year. One result of last year's meeting had been an immediate increase in the number of Boards of Trade throughout the Territories, and in the interest and activity of existing boards. It was true that Boards of Trade are merely advisory and in no sense legislative bodies, but no Parliament or Legislature could afford to ignore the formally expressed opinions of such a body, and it would be difficult to over-estimate their influence. The present convention was the last which would be held as a Territorial body; it was for the convention to decide whether or not separation along the lines of the two new provinces was advisable. His closing words were a strong plea for the dropping of all sectional differences and for united work for the good of a united west.

Division or Union.

As the first order of business was the election of officers, the question of division or union at once presented itself for discussion. Judge McGuire, of Prince Albert, and Wm. Short, of Edmonton, strongly advocated the maintenance of the status quo for at least another year. R. J. Hutchings, of Calgary, argued that division must come some time, as the principal function of the convention was to advise the legislatures. Finally the question was shelved for discussion later, and it was decided to proceed with the election of officers, the understanding being that the officers would hold their positions for a full year, unless it was decided before the adjournment of the convention to divide on provincial lines.

A General View of Regina.

J. A. Boyle, R. N. Weir and C. C. Rigby, Balgonie.

W. C. Thorburn and B. Paul, Broadview.

R. J. Hutchings, C. W. Rowley, Wm. Pearce and W. H. Cushing, Calgary.

E. J. Suchring, H. P. Humphrey and R. H. Catherwood, Craick.

F. C. Whitelock, Reuben Lloyd, Geo. A. Scott and J. E. Miller, Davidson.

William Short, T. W. Lines, A. C. Fraser, G. R. F. Kirkpatrick and Mayor K. W. McKenzie, Edmonton.

Arthur Kelly, D. R. Davies and H. F. Jordan, Estevan.

B. P. Richardson and John Walker, Grenfell.

J. A. McCaul, H. H. Campkin and Jas. Conn, Indian Head.

W. C. Ives, Lethbridge.

W. Binning, Lumsden.

W. T. Finlev F. L. Crawford, W. Cousins and Thomas Tweed, Medicine Hat.

W. Loree, H. McKellar, G. K. Smith J. R. Green and W. B. Willoughby, Moose Jaw.

W. R. Abbott, G. W. Quick and J. M. Lang, Maple Creek.

Officers Elected.

Officers were then elected as follows:

President—Thomas Tweed, of Medicine Hat.

First Vice-President—R. J. Hutchings, of Calgary.

Second Vice-President — Justice McGuire, Prince Albert.

Secretary-Treasurer—Wm. Trant, Regina.

Mayor Welcomes Delegates.

Mayor H. W. Laird then welcomed the delegates to Regina and tendered them the freedom of the city. Regina's mayor is an energetic young business man, a clear incisive speaker, and an excellent type of the enterprising, progressive young men who are building up the west.

He said it had come within the scope of his duties many times in the last 18 months to welcome to Regina visiting conventions, but not while he had been mayor, and probably never before in the history of Regina, had such a large and influential body of business men gathered in the city. There was plenty of scope for the convention, and he had no doubt they would take full advantage of their opportunity.

"Our plans for your entertainment

have been upset by Jupiter Pluvius. The heavens have been shedding tears of joy in anticipation of a bountiful harvest, and the water and Regina soil make a combination of which you are likely to carry away very many mementoes. Time was when we were touchy about our mud. We were told that a man might travel

'From Greenland's icy mountains
To India's coral strand,'

and nowhere find anything to compare with Regina mud. But we are wiser now and we are proud of Regina mud and the harvests which it produces. In the west we are all enthusiasts about our own localities, so you can not find fault with me for sounding the praises of Regina. Our population and assessment have increased three-fold in the last four years. Our assessment is now $4,000,000, and our population is in excess of 7,000. We have just completed a gravitation system of water works and an electric light plant (owned by the municipality) at a cost of $300,000."

His worship then outlined the programme of entertainment provided by the city Board of Trade, the ladies of the city, and by the Lieut.-Governor and Madame Forget. He concluded with the hope that the time might soon come when Regina could again welcome the convention, and drew a roseate picture of what the city will be in another three or four years.

Committees Appointed.

Two committees were then appointed. The committee on resolutions and procedure was composed of the following gentlemen: Justice McGuire, Prince Albert, (convenor); T. H. Blacklock, Weyburn; J. A. MacCaul, Indian Head; W. B. Willoughby, Moose Jaw; Wm. Short, Edmonton; H. F. Mytton, Regina; R. J. Hutchings, Calgary, and Jas. Clinskill, M.P.A., Saskatoon.

The committee on credentials was composed of T. W. Lines, Edmonton; W. T. Finley, Medicine Hat, and Wm. Trant, the secretary, Regina.

The convention then adjourned.

SECOND SESSION.

At the afternoon session the committee on credentials reported that a number of boards had not complied with all the regulations, but recommended that their delegates be received. Report adopted.

The committee on resolutions and procedure also presented a report which, after some discussion, was adopted.

Salaries of Provincial Ministers.

R. J. Hutchings, of Calgary, then introduced the following resolution:

"That it is expedient and in the public interest that the salaries of Cabinet Ministers in the new Provinces of Saskatchewan and Alberts should be on the same scale as is paid by the Province of Ontario."

Speaking to the resolution, Mr. Hutchings pointed out that the salaries of Ministers in the Northwest Territories have been ridiculously inadequate. An ordinary country merchant could easily make a larger income than a Territorial Cabinet Minister. The Calgary Board of Trade were of opinion that the matter of an increase of their salaries is a delicate question for Ministers to touch, and they believed that a pronouncement on the subject by the convention would help solve the difficulty. It was eminently a fit subject to be dealt with by a Board of Trade convention, and it should not be allowed to become a party football.

The reso,ution was seconded by C. W. Rowley, of Calgary, who said he was a strong believer in the principle that if you want good men you must be prepared to pay them well. Money making opportunities in the west were very great, and it was ridiculous to ask men of sufficient ability to be Cabinet Ministers to serve for salaries which were only a small part of what they could earn in business pursuits.

H. F. Mytton, of Regina, supported the motion strongly. "We need Cabinet Ministers in the west who are every bit as able as the Ontario Ministers, for we are just as good as Ontario, but if we want them we must pay them well."

Thos. Copeland, of Saskatoon, opposed the resolution. He was in favor of increased salaries, but did not see that they should necessarily be on the Ontario basis. Finally, after a discussion which threatened to become acrimonious, Mr. Hutchings amended his resolution and it was passed unanimously. The resolution as amended was as follows:

"That it is expedient and in the public interest that the salaries of Cabinet Ministers in the new Provinces of Saskatchewan and Alberta should be on a liberal scale and commensurate with the responsibility and dignity of the position."

Transient Traders.

W. Loree, of Moose Jaw, then introduced a resolution, which was seconded by P. McAra, of Regina, to the effect that the law relating to transient traders should be amended. Speaking to the motion, Mr. Loree pointed out that there were no restrictions on transient trades (hawkers and pedlars) in the country districts, and they were taking away money and trade which should belong to legitimate resident merchants who pay their taxes. After some discussion the motion was referred back to Mr. Loree for amendment as it was not sufficiently explicit. At a subsequent session, in the absence of Mr. Loree, a resolution dealing with the subject was introduced by G. K. Smith, of Moose Jaw, and seconded by P. McAra, of Regina. This resolution, which was passed unanimously, was as follows:

"That in the opinion of this convention the Ordinance relating to transient traders should be amended to make the fee for such traders $25 in each electoral district of the Northwest Territories, the license to be good for three months only, and that such fee shall not be deemed to cover or include fees imposed by towns, cities or municipalities."

Freight Rates.

A resolution referring to freight rates was introduced by the Davidson delegation; it called upon the Governments of the new provinces to take up the question of excessive freight rates in the N.W.T. with a view to having them reduced to a reasonable basis.

Wm. Pearce, of Calgary, pointed out that the matter should be brought to the attention of the Railway Commission, not of the new provinces. Mayor Laird also objected that the resolution was out of order, and after some discussion it was withdrawn and it was not heard of again.

Government Telephones.

Government ownership is popular in the west, as was shown in the action taken by the convention in regard to the Government ownership and operation of telephone systems. The following resolution was introduced by G. A. Love, of Red Deer and seconded by Wm. Abbott, of Maple Creek:

"That the time has arrived when the Government ownership and operation of all telephones forming a complete national system would be in the public interest."

Speaking to his resolution, Mr. Love emphasized the absolute necessity of telephone communication in modern business and pointed out that from its very nature the telephone business should be a monopoly. It was a nuisance in any town to have two systems. There

must be monopoly; the only question is whether there should be a Government monopoly or a corporation monopoly.

"The Government at Ottawa have undertaken to consider the question in a practical business-like way, and as a result we have a commission now sitting and taking evidence at Ottawa. I am not sure that the scheme outlined by the Postmaster-General is as broad as that proposed in this resolution, but that does not matter. We want to establish the principle that the telephone system should be a national system corresponding to the post office.

"The Government need not run the system to make money. They can borrow the capital outlay at a low rate, and they require profits only to pay the interest. They could lower rates, as they would have no dividends to pay. The telephone system should be extended wherever the post office goes, and it should not be run to make a surplus."

Mayor McKenzie, of Edmonton, explained that that town has its own municipal telephone system. He would not want to see the Government take it over. He favored the Government ownership and operation of trunk lines with connections with municipal lines.

"My name is Ives, from Lethbridge," announced the next speaker, "also from Missouri, for I 'want to be shown.' This is a serious matter, a serious expression of opinion is expected from us, and we want some facts and figures as to cost, etc."

H. F. Mytton, president of the Regina Board of Trade, was the next speaker. "I am opposed to Government ownership for I want to stimulate private enterprise. Private ownership and individuality are the secrets of success. Very soon, if this kind of thing goes on, we shall all be working for a government and there will be no individuality in a new country. When that day comes, God help this new country!"

Justice McGuire, of Prince Albert, did not agree with Mr. Mytton. Since the telephone business is necessarily a monopoly, there can be no expression of individual effort in making it a Government monopoly. To give a monopoly to any individual or corporation is dangerous. If we are to be governed by a corporation let the corporation be a government which we can control.

G. A. Love, of Red Deer, then rose to present some facts and figures for the consideration of the "gentleman from Missouri." He gave the experience of the English and German Government-owned telephone systems. English rates are half the Canadian rates and the German rates are still less.

Frank R. Oliver, of Saskatoon, objected that comparisons with England and Germany are unfair. Canada is a country of greater distances and less population. He thought the subject should be shelved until after the report of the commission is at hand. He favored the abstract principle in case the lines could be made to pay, but not otherwise. "We want no telephone deficits; the Intercolonial deficits are enough."

C. W. Rowley, of Calgary, was also opposed. His experience in trying to get improved postal service south of Calgary was that the Bell Telephone Co. were more amenable to reason than the Post Office Department.

T. W. Lines, of Edmonton, urged that comparison with the Intercolonial Railway was unfair. "At all events we don't want to run the system to make a surplus. We can't get at the figures of the Bell Telephone Co., and it is not up to us to show that the proposition will pay. Suppose there is a deficit in the telephone system and in the Post Office Department, what of it? The important thing is cheap communication."

After some further discussion, the resolution was carried, not more than ten votes being cast against it.

Insolvency Legislation.

After a committee on permanent organization had been named, with Mayor H. W. Laird as its chairman, President A. L. Johnson, of the Winnipeg Board of Trade, who occupied a chair beside President Tweed, introduced the following resolution regarding insolvency debtors:

"That a committee be named by the president, consisting of a representative from each of the Provinces of Alberta and Saskatchewan, to act jointly with a representative of the Winnipeg Board of Trade to consider the question of insolvency legislation, the said committee to report to the president, and, together with him, to take the necessary steps towards securing the required legislation from the Legislatures of the new provinces to have the proposed Act made law.

In speaking to his resolution, Mr. Johnson pointed out that the subject had been raised in Calgary last year by William Georgeson, of Winnipeg, and that it had been left over for a year. Perhaps the term Insolvency Act was an unfortunate one, as the Dominion Parliament only could pass an "Insolvency Act," but since the Dominion Parliament would not take up the matter they wanted a substitute such as the Manitoba Act relating to the subject. In the N.W.T. there was no Act such as the Manitoba Act. The only requirement was an Ordinance to the effect that a debtor making an assignment must do so to a resident of the N.W.T. The Ordinance was inadequate for the assets of an insolvent debtor are by right and justice the property of the creditors and should be disposed of by them. The assignee in the N.W.T. was not necessarily bound by the wishes of the creditors; they could act only in an advisory capacity.

Mr. Johnson pointed out the advantages of a uniform Act in the new provinces and Manitoba. He hoped to see the new provinces adopt the Manitoba law, which was copied lrom the Ontario Act.

"The necessity is obvious to business men," continued Mr. Johnson. "In Manitoba a debtor is required to assign to an official assignee, who must call a meeting of the creditors. At that meeting an inspector is appointed whose duty it is to see what is the best way to dispose of the assets. We usually wind up estates in Manitoba in 30 days or less."

R. J. Hutchings, of Calgary, seconded the resolution. The Manitoba Act was, in his opinion, the simplest and most inexpensive in the country. Calgary was vitally interested in the matter, as more than fifty houses there are doing a wholesale business.

After some further discussion by Justice McGuire, A. L. Johnson and Wm. Pearce, the resolution was amended to include the Vancouver Board of Trade, to whom an invitation will be sent, and the resolution as thus amended was carried unanimously.

Notice of Sale.

On Motion of President A. L. Johnson, of Winnipeg Board of Trade, and of T. W. Lines, of Edmonton, the following resolution was then submitted to the convention:

"That a committee be appointed by the president, together with a representative from the Board of Trade of Winnipeg, to prepare special legislation which it is desirable should be enacted by the Legislatures of the proposed new provinces, providing that in the event of any trader making a sale of his business he should give due notice of same to each of his creditors, allowing a fixed time to elapse for notice to be filed on the purchaser by parties interested before a good title to the goods so purchased can be made by the purchaser."

Mr. Johnson explained that the wholesale men of Winnipeg had had much bitter and costly experience with merchants who sell out their whole business and then go to Winnipeg offering so many cents on the dollar, which the wholesaler must accept or get nothing. This resolution could do no harm to any honest man, but it would put a stop to this dishonest practice.

Wm. Short, of Edmonton, opposed the resolution vigorously.

"No free people would submit to such a law," he declared. "There is no distinction made between the insolvent and the man who can pay his debts. Why should not a man be allowed to sell when and where he will without restriction? Why restrict 90 per cent. of the merchants because of a fraudulent 10 per cent.? Besides, the law deals with this now. A sale made within 60 days of insolvency may be set aside upon evidence of fraud."

Frank Oliver, of Saskatoon, opposed the resolution and Justice McGuire, of Prince Albert, supported it. J. A. MacCaul, of Indian Head, spoke vigorously in opposition.

"No legislation can make a man honest, and this law would cast an unwarranted reflection upon the merchants of the west. The motion should not be passed without further consideration."

Mayor McKenzie, of Edmonton, thought the proposed legislation would interfere too much with the honest man who had

WHERE THE CONVENTION WAS HELD.

Regina the capital city of the Northwest Territories and the provisional capital of the new province of Saskatchewan, is a thriving city of over 7,000 inhabitants. There is an evident air of prosperity about the place, and a visitor cannot be long in the city before he is made acquainted with the fact that Regina has ambitions to be a distributing centre equal in importance to Winnipeg. Two years ago Regina was made a distributing railway centre with all the freight rate advantages the status implies. The result was soon seen. The big implement firms of Canada and the United States have erected there large warehouses that are well stocked. Wholesale houses are locating sites, while two foundries two planing mills, a furniture and fitting factory, a pork packing establishment, two brick yards and some minor undertakings form the nucleus of a manufacturing community. As a distributing centre, Regina has the advantage of being the only railway centre between Winnipeg and Calgary, a distance of 840 miles, being 360 miles from the former and 480 from the latter. The city is disected by the main line of the C.P.R., and is the southern terminus of the Regina and Prince Albert Railway and the western terminus of the Arcola Extension. In addition to these the C N.R. will soon pass through the city and the G.T.P. will tap the district.

Regina is the headquarters of the Royal Northwest Mounted Police. It is, too, the usual place for the sessions of the Supreme Court. There are five schools in the city as well as a high school and normal school. There are four weekly newspapers and one daily newspaper, an active Board of Trade and five banks.

The convention was held in the court house.

good reasons for wanting to sell out at once. Opportunities in business must be seized at once and delays would often hinder the sale entirely.

R. N. Weir, Balgonie, spoke as a retailer. He recognized that an evil does exist, but the protection proposed to be given the wholesaler against the retailer should also be extended to the retailer as against his customers.

H. W. Mytton spoke vigorously in opposition to what he thought a ridiculous proposal and an unwarranted interference with individual liberty, and after further speeches from Wm. Short and A. L. Johnson, the motion was lost by a very large majority.

Grain Shipments.

Hugh McKellar, of Moose Jaw, then introduced the following resolution regarding grain shipments westward bound:

"That the attention of the Dominion Government be again directed to the question of the inauguration of a system of inspection and weights for grain shipments to western markets."

Speaking to his resolution, Mr. McKellar said that the actual figures supplied by the grain men show that 1,000 cars of wheat are sent west every year. The output of Fall wheat in Alberts this year will be about 1,500,000 bushels and the natural market is in British Columbia and the Orient. The quantity was sufficient to warrant the Government appointing a man to grade this wheat and weigh it.

The motion carried and the convention then adjourned to attend the garden party tendered by the ladies of Regina.

THIRD SESSION.

The Thursday evening meeting was called to order at eight o'clock sharp, as the Board of Trade banquet was to follow, and there was much on the order paper. The first resolution referred to the surplus lands in

Indian Reserves,

the matter being brought to the attention of the gathering by Wm. Pearce, of Calgary, and W. T. Finley, of Medicine Hat, who moved and seconded the following resolution:

"Whereas large areas of land contiguous to prosperous towns and settlements throughout the Territories are at present unproductive on account of being occupied as Indian Reserves; and

"Whereas such Indian Reserves are generally unnecessarily large, frequently many times as extensive as demanded by actual requirements and larger than was ceded them when under treaty, and

"Whereas such surplus lands, if sold, would in many cases realize a large amount of money, which, if invested for the benefit of the Indians, would yield a considerable revenue;

"Therefore, be it resolved that this convention petitions the Dominion Government to exert the strongest influence possible with the Indians to have the said surplus lands disposed of to actual settlers and thus materially aid the development of the districts in the Territories at present contiguous to Indian Reserves."

Speaking to his resolution, Mr. Pearce said that the first clause might be passed over without comment, as no one would dispute the fact that the Indian Reserves are quite unproductive. In regard to the second clause, he would confine his remarks to Alberta, with the conditions of which he was familiar. The Indians are guaranteed one square mile of land for each family of five persons, but the census returns show that they have much more than the treaty guarantees them. The average population is about 1.5 persons to the square mile. The speaker quoted figures to show the conditions in the various reserves. In one reserve the land allowed is 30 per cent. in excess of that guaranteed by treaty; in another 93 per cent.; in another 105 per cent.; in another 135 per cent., and in another 104 per cent. The four reserves south of the main line have 127 per cent. more land than the treaty requires. The speaker urged that the Indians are shiftless and make no use of their lands. If they could be induced to sell a portion, and the money were invested for them by the Government, they would have a fixed and steady income more than ample for their requirements.

After some discussion the motion was carried.

Distribution of Government Institutions.

W. B. Willoughby, of Moose Jaw, then moved the adoption of the following resolution, seconded by J. R. Green, Moose Jaw:

"That in the establishment and locating of public buildings and institutions, and in the appointments to public office, by the Governments of the two new Provinces of Alberta and Saskatchewan, the principle of decentralization be adopted as far as possible."

Mr. Willoughby prefaced his remarks on the resolution by the statement that the convention would appreciate his altruistic motives, as no doubt they all knew that Moose Jaw is to be the capital of Saskatchewan—a statement received with groans and laughter by the Regina and Saskatoon delegation.

In Ontario, he said, the public institutions and offices had been centralized to a very great extent, and the people of that banner province were now convinced of the mistake that had been made. A great number of institutions must soon be established in Alberta and Saskatchewan, and this was the opportune time to insist that they be distributed throughout the provinces and not centralized in the capitals. Registry offices should be distributed. There should be a dozen or more in the Province of Saskatchewan instead of one large central institution in the City of Regina. Appointments to office should be guided by the same principle.

"I would take away from the Provincial Government the power to appoint sheriffs and clerks of the court. Let these officials be appointed by judges."

J. R. Green seconded the resolution He said the United States gives us a good object lesson in the benefits of decentralization, which had proved to be a safeguard to liberties. In very many respects the United States is ahead of Great Britain, and this is one of them.

H. F. Mytton, Regina, opposed the resolution.

"The principle is all right; I find no fault with it; but every government must do what is expedient under particular circumstances. I don't believe in hard and fast resolutions on such matters—they don't come within the scope of this convention's work. Policy must always be secondary to expediency in such cases. It is all very well to say that these good things should be distributed throughout the province, but the Government must settle each case on its own special merits, and it is the height of folly to say that Government patronage must be distributed in one, two, three order.

Thos. Copeland, Saskatoon, also opposed the resolution.

"It is none of our business," said he. "It is the duty of the Government to put an institution where it is most convenient for the purposes for which it is intended, and where it can be most economically managed. If these principles could not be followed in placing a Government institution in Saskatoon I would not want it there—not if it increased the value of my property 100 per cent." (Loud applause.)

Wm. Pearce, Calgary, here suggested that the resolution might be made acceptable to the convention by the addition of the words "having due regard to efficiency and economy." The suggestion was accepted by Messrs. Willoughby and Green, and the resolution was then declared carried.

Commercial Agency Reports.

Mayor Laird of Regina then moved, seconded by C. W. Rowley of Calgary, the adoption of the following resolution:

"Whereas the present system of daily commercial reports, as issued by the commercial agencies, contains no information as to whether the writs therein noted are for disputed accounts or involve counter claims;

"And, whereas, the credit of the defendant is thereby unjustly impaired,

"Therefore be it resolved, that in the opinion of this convention of the Associated Board of Trade of the Northwest Territories the commercial agencies should be prevailed upon to note in their daily reports the fact that such writs are for disputed accounts or involve counter claims, on being notified by the defendant to that effect."

Speaking to his resolution, Mayor Laird said that he introduced it because personal observation had convinced him that the matter is one of pressing necessity. The resolution had been carried in the Regina Board of Trade after a long discussion.

"When writs are issued," he explained, "the clerk sends a report to the mercantile agencies, which distribute them among business men in all parts of the country by means of their daily commercial reports. When a business man sees that John Jones, of Calgary, is being sued for $1,500 he presumes that John Jones is not financially sound, that he is being pushed into a hole, and that the only safe course is to press John Jones for payment. The business man does not know that there is a counter claim for $1,400, and that the liability of John Jones is only $100. He doesn't know this, and he and others press for payment of their accounts. John Jones may be perfectly solvent, and yet this sudden pressure upon him is very inconvenient, and the commercial

EDMONTON NEXT YEAR.

There was keen rivalry among Edmonton, Saskatoon, Prince Albert and Lethbridge for the honor of being the next place of meeting. Edmonton was finally chosen.

agency report does him a great, although unintentional, injustice.

"This is not idle talk. I have personal knowledge of just such a case in which a perfectly solvent man was forced to make an assignment, and as his property was sold at a sacrifice he lost all that he had.

"I do not discourage the use of commercial agency reports, for they are absolutely essential to modern business; all that I do is point out one important respect in which they can be improved, thereby remedying a great injustice."

Frank Oliver, Saskatoon, objected that very few retailers take these reports, and they would not know that the agencies had published the news that they were being sued.

H. F. Mytten, Regina: Every intelligent man who has a writ served upon him knows that the fact will be published in the commercial agency reports, and he can write to the agency at once or he can enter a counter claim at once, and it will be reported. If he isn't intelligent enough to know that, I don't think it matters much whether he stays in business or not."

H. G. Dawson, Wakella: "There is just one objection to this resolution. Every defendant will be able to invent some plausible excuse, and the benefit of the report will be entirely nullified."

After some further discussion, in which Thos. Copeland, Saskatoon, took a prominent part, the resolution was carried without amendment.

Government Fire Insurance.

W. H. Cushing and R. J. Hutchings, of Calgary, then moved and seconded the adoption of the following resolution:

"Whereas, the fire insurance rates in towns and cities throughout the Northwest Territories are being increased from time to time to an alarming extent, principally in order to cover losses sustained in populous cities in the east; and

"Whereas systems of fire insurance under Government auspices have been successfully carried out elsewhere, notably in New Zealand; and

"Whereas the principle of Government Insurance has been adopted in the Northwest Territories in connection with losses in grain crops due to hail storms;

"Therefore, be it resolved that this convention most respectfully begs to submit for the consideration of the Governments of Saskatchewan and Alberta the desirability of causing enquiries to be made into the subject with a view of providing a system of Government fire insurance."

Mr. Cushing urged that there was nothing revolutionary in the motion presented. He thought there could be no difference of opinion that rates in the west are too high, mainly because they must help in the west to pay the big losses in the more populous centres in the east. He believed that Government fire insurance was working well in the Australasian sister colonies and all that the resolution asks is that the Government investigate.

Wm. Short, of Edmonton, made a determined effort to include the subject of life insurance in the resolution, moving an amendment to that effect. The amendment was lost and the original motion carried unanimously.

Fire Marshals.

President A. L. Johnson, of Winnipeg, then moved the following resolution, which was carried without opposition or discussion:

"That a committee of two be appointed by the president to consider the question of the appointing of a fire marshal in each of the new provinces and prepare the necessary legislation to be submitted to the Governments of the new provinces to be enacted."

Mr. Johnson explained that the object was to have the cause of every fire officially investigated, as he believed this would prevent a great deal of incendiarism and carelessness. The convention then adjourned to meet on Friday morning.

FOURTH SESSION.

In spite of the dissipation of the night before at the banquet, several committees were at work during the one o'clock in the morning and the convention resumed its discussion shortly after ten o'clock. C. N. Bell, secretary of the Winnipeg Board of Trade, was present at this meeting and occupied a seat beside President Tweed.

Timber Limits.

A. C. Fraser, of Edmonton, moved, seconded by W. H. Cushing, of Calgary, the adoption of the following resolution regarding timber limits:

"That it is considered highly undesirable that any timber limits in Western Canada should be sold, except under conditions requiring reasonable use to be made of such berths within not more than two years of the date of sale, and in the event of the purchaser failing to make use of such timber berth within two years from the date of the purchase, such berth revert to the Government to be available for sale to any parties desirous of utilizing the timber thereon. And that the Minister of the Interior be respectfully asked to give this matter his most careful attention."

Mr. Cushing explained that large areas of timber limits have been purchased by eastern speculators during the last five years and nothing has been done with them, the owners simply holding them in expectation of a rise in values. The Minister of the Interior has discretionary power enabling him to compel the erection of saw mills on pain of loss of the limits, but nothing had been done. Legitimate millers are being kept out of the country by speculators who hold their lands idle.

Mr. Cushing, of Calgary, seconded the resolution, covering much the same arguments as the mover.

Wm. Pearce, Calgary, said that he was surprised to find no reference in the resolution to the importance of preserving the forests from loss by fire. The loss by fire was greater than that from speculators.

"In this matter, the Government can go only so far as it is supported by public opinion, and it is our duty to educate public sentiment along the proper lines. Some of the regulations offer a big temptation to incendiarism. When a quarter section contains a certain amount of timber it is not open for homesteading. Consequently if the quarter section is desirable there is a strong temptation to start a fire in it."

Moreover there is a regulation that dead timber can be obtained without fees. Hence settlers often start fires in order that they may get the burnt timber for nothing.

T. W. Lines, Edmonton, brought the discussion back to the question of the speculators and finally it was decided to refer the whole question to a committee, instructing them to draft a resolution which would cover all phases.

The committee was composed of A. C. Fraser, Edmonton; Wm. Pearce, Calgary; G. A. Love, Red Deer, and B. P. Richardson, Grenfell. At the afternoon session they submitted the following resolution, which was unanimously adopted:

"That owing to the scarcity of growing timber in Alberta and Saskatchewan, it is highly desirable that the same should be reserved for the use of the actual settler, made available for immediate use and preserved from falling into the hands of speculators.

"To this end it is recommended that the present timber regulations requiring actual operation by timber holders be rigorously enforced, that the timber not already disposed of be retained by the Government for the use of actual millers or settlers, that vigorous steps be taken looking towards the preservation of the timber from fire and towards reforestration."

Hospitals.

Hugh McKellar, of Moose Jaw, then moved the adoption of the following resolution:

"That the best interests of the new provinces would be served by having our hospitals built and maintained by the provincial authorities."

A long discussion followed, in which a great number of delegates took part. H. F. Mytton, Regina, and W. H. Cushing, of Calgary, opposed the idea of Government control quite vigorously.

"There is far too little "noblesse oblige" in this country," said Mr. Mytton. "If you throw the responsibility holus bolus on the shoulders of the Government you do away entirely with voluntary contributions. No one will contribute to the support of an institution for which a Government is responsible."

Finally the following amendment was adopted by the convention, on motion of Wm. Pearce, of Calgary, and A. E. Moore, of Raymond:

"That the Governments be requested

to assist to a greater extent than at present the hospitals in the new provinces of Alberta and Saskatchewan."

The convention then adjourned until 2 p.m.

FIFTH SESSION.

The fifth and concluding session of the convention commenced shortly after two o'clock, Friday afternoon. The first topic for discussion related to

Education.

and was introduced by Mayor K. W. McKenzie, of Edmonton, who moved the adoption of the following resolution :

"That in the opinion of this convention of the Associated Boards of Trade of the Northwest Territories it is highly desirable, from the standpoint of economy as well as convenience, that the Governments of the proposed Provinces of Alberta and Saskatchewan endeavor, as far as possible, to adopt common text books for Public Schools and a common curriculum for High Schools, looking to the free interchange of teachers' certificates and other certificates of standing between the provinces, and that such a policy will best serve the highest educational interests of the said provinces."

Mayor McKenzie said that the uniformity which now existed in the Territories might well continue in spite of the imaginary line which was being drawn to divide the country into two provinces. He pointed out that there is a sparse population in the new provinces and much better terms could be obtained from the publishers if the same text books were used in both Alberta and Saskatchewan. It was also desirable to have "unrestricted reciprocity in teachers." He urged the adoption of the resolution because it was practicable and embodies business principles.

The resolution was seconded by R. J. Hutchings, of Calgary, and adopted unanimously.

Permanent Organization. — 1 c — —

Mayor Laird of Regina then presented the report of the committee on Permanent Organization, Constitution and By-laws. The report recommended that the association remain one united body and organize permanently as the "Associated Boards of Trade of Alberta and Saskatchewan." The committee also submitted a draft constitution and by-laws.

Mayor Laird moved that the report be adopted, and that the convention resolve itself into committee of the whole to consider the constitution and by-laws clause by clause. The motion carried without discussion.

A Misunderstanding.

That there had been no opposition was due entirely to a misunderstanding, and this was soon made clear, for there was a strong minority in favor of separation on provincial lines.

When the first clause of the constitution referring to the name of the association came up it was quite clear that very many members had not understoon that the principle of permanency had been adopted. In spite of interruptions Mayor Laird, who was in the chair while the convention was in committee, proceeded to put the vote on clause 1 of the constitution.

Then up rose Frank Oliver (not Hon. Frank! the doughty scrapper from Saskatoon. Young, aggressive, clean shaven, with a determined, firm-looking jaw, he looked the part of one who "scents the battle from afar." He protested vigorously against the "railroading" of such a resolution through in such a manner, and moved that the question of permanent organization be reconsidered. He was promptly ruled out of order, as the convention was in committee of the whole, and he subsided for the moment.

H. F. Mytton moved in amendment to clause one of the constitution that the name of the association be "The Associated Boards of Trade of Western Canada." This would allow the inclusion later of Manitoba and British Columbia if that were thought advisable. The amendment carried.

The constitution, as adopted in committee, provides that the association shall include all Boards of Trade in the Provinces of Alberta and Saskatchewan which shall comply with the regulations. A Board of Trade with 60 members and upwards shall be entitled to 4 delegates; a board with less than 60 members, and at least 40 members, shall be entitled

RETURNED JUL 8 1905 To Answer Back 37 Page 37

H. F. Mytton

to 4 delegates; a board with less than 40 and at least 30 members, shall be entitled to 3 delegates; a board with less than 30 and at least 20 members, shall be entitled to 2 delegates, and boards with less than 20 members shall be entitled to 1 delegate.

Union or Division?

When the committee rose and Mayor Laird had move the adoption of its report, Frank Oliver's chance had come. He moved in amendment that the question of permanent organization be reconsidered. His motion was defeated, but there was a strong minority in favor of division.

Immigration.

A harmless and meaningless resolution referring to immigration, introduced by the Moose Jaw delegation, was carried without discussion. It was as follows :

"That it would be to the best interests of the new provinces for the Legislatures to adopt a progressive immigration policy."

Law Amendments.

Justice McGuire, Prince Albert, then presented the report of the Law Amendment Committee. Perhaps the most important recommendations referred to exemptions, and these were as follows :

"That the Exemption Ordinances should be amended as follows :

(a) "To provide a classification for different classes of persons, e.g., one for a farmer and another for an artisan, etc.; the total exemption in no case to exceed $1,500, including the homestead.

(b) "That a time limit should be put on exemptions.

(c) "That voluntary transfers of exempted property (particularly from husband to wife) or like transfers, should be declared fraudulent as against creditors."

(d) "That protection should be given a debtor in the discretion of a judge against a clear sacrifice of property liable under seizure, e.g., the sale of immature or unready stock."

A committee consisting of Justice McGuire, Prince Albert; Wm. Short, Edmonton; H. F. Mytton, Regina, and R. J. Hutchings, Calgary, was appointed to present the report of the Law Reform Committee to the Legislatures.

Hudson's Bay Railway.

The following resolution, moved by H. F. Mytton, Regina, and seconded by Wm. Pearce, Calgary, was carried unanimously :

"That the president appoint a committee of five to formulate a resolution expressing the interest of the people of the Territories in the matter of the proposed Hudson's Bay route from Western Canada to the markets of Europe, and urging that every possible means be taken to determine the conditions of navigation in the Hudson's Bay and Straits;

"And, further, that the committee endeavor to arrange that the various business centres of the west express their desires regarding the Hudson's Bay route to the Dominion Government."

Accordingly the following committee was named by the president : Wm. Pearce, Calgary; Mayor K. W. McKenzie, Edmonton; W. B. Willoughby, Moose Jaw; P. McAra, Regina; Justice McGuire, Prince Albert.

Edmonton Next Year.

The claims of Edmonton, Prince Albert, Saskatoon and Lethbridge, as suitable places for the next convention, were urged by delegates from these towns, and finally it was decided by a large vote to meet next year at Edmonton.

Votes of thanks were passed to the officers and committees, etc., and the convention was closed with the National Anthem.

THE BANQUET.

The banquet tendered the visiting delegates by the Regina Board of Trade was in every sense of the word a striking success. It was held in the Windsor Hotel on Thursday night, and as it followed a night session of the convention, it was almost 11 o'clock when it commenced and after midnight before the toast list was reached. H. F. Mytton, president of the Regina Board of Trade, presided, and was ably assisted by the vice-chairman, H. W. Laird, the clever and popular young mayor of the city. To the chairman's right sat Thomas Tweed, president of the Associated

Boards of Trade, A. L. Johnson, President of the Winnipeg Board of Trade, and Hon. G. H. V. Bulyea; to his left were Premier Haultain, F. W. Peters, general traffic manager of the C.P.R., and Hon. W. Elliott.

When justice had been done to a sumptuous menu, the following toast list was reached:

Toasts.

"There St. John mingles with my friendly bowl,
The feast of reason and the flow of soul."—Pope.

1. The King

"God save the King."

2. The Governer-General and Lieut.-Governor.

3. Transportation Interests.

4. The Parliament of Canada and Provincial Legislatures.

"For Forms of Government let fools contest,
Whate'er is best administered is best."—Pope.

5. Our Guests.

"For whom he means to make an often guest,
One dish shall serve; and welcome make the rest."—
Hall.

6. Trade, Commerce and Agriculture.

"Ill fares the land to hastening ills a prey,
Where wealth accumulates and men decay."—
Goldsmith.

God save the King.

The toast to the King was honored in loyal fashion and all joined in singing the national anthem. The chairman announced that he had a letter of regret from Lieut.-Governor Forget who was unavoidably absent and the second toast was honored without any speeches.

Transportation Interests.

F. W. Peters, general traffic manager of the C.P.R., responded to the toast to "Our Transportation Interests." Mr. Peters regretted that no representative of any other railway was present, for the time was past when the C.P.R. were the "whole thing" in the west. Other railways were extending in the west and would divide the traffic with the C.P.R.

In this connection, Mr. Peters told an amusing story of an Irishman who arrived in Canada a short time ago. Landing at Quebec from a steamer, which he had been told belonged to the C.P.R., his eye was caught by the graceful outlines of the Chateau Frontenac. "Who owns that house?" he asked.

"The C.P.R.," was the reply.

He traveled to Montreal on a railway line, which he was told was C.P.R., and he put up at the Place Viger Hotel, which, to his amazement, he found also belonged to the C.P.R. He traveled to Owen Sound by C.P.R. and boarded a C.P.R. boat which brought him to Fort William. Another C.P.R. hotel was there for his accommodation. Now Fort William is a divisional point; the time changes there. Meeting a man on the street Pat asked the time.

"C.P.R. time?" was the query.

"By Jabers, do they own time, too?" was the Irishman's exclamation.

Passing to the serious portion of his address, Mr. Peters referred to the great interest displayed in the United States and Canada in recent years in the question of the control of railway rates. "Two years ago the Canadian Government put on the statute books a law relating to the control of rates, a law framed with the very best object in view, viz., the prevention of discrimination in rates. They appointed a Railway Commission, in whom both the railways and the public have confidence, its chairman being a man of acknowledged legal ability.

"The railways and the general public should unite in an effort to give this commission a fair chance to solve the problems which come before it. So far it has done good work, and I am very hopeful as to the future. Of course not all of its decisions have been pleasing to the railways, and the public have not always been satisfied, but that is only to be expected.

"Let me make it plain that the railways do not object to this Act; we are willing and anxious to give the system a fair trial. We welcome every measure designed to protect the railways against the demands of selfish shippers who want discrimination in their favor. We need assistance for it is a hard matter to persuade the big shipper that he should not be given a better rate than the small shipper.

"All prospects point to a larger harvest than we have ever had before, and for that reason the people of the west are more than ordinarily interested in the transportation question. I may tell you that the C.P.R. are doing everything possible to handle the big crop quickly. Mr. Whyte has given the matter special attention and he has made some interesting calculations. You know he is a careful man, and what he says is usually correct. Provided the opening price is such that the crop will begin to move at once, Mr. Whyte estimates that 28,000,000 bushels can be moved before the close of navigation. We have put on 4,000 additional cars and 68 extra locomotives for the western lines. At Kenora a locomotive will pass every 22 minutes during the whole 24 hours in the busy season. The C.P.R. are doing everything possible to handle the big crop with the least possible delay." (Applause.)

Premier Haultain.

Chairman Mytton then proposed the toast of the Parliament of Canada and Provincial Legislatures, coupling with it the name of Premier Haultain. The storm of applause which greeted the name of the Territorial Premier caused the chairman to remark: "I never made such a popular speech before in my life."

Premier Haultain was greeted with prolonged cheers and "He's a jolly good fellow" renewed again and again, showing conclusively the strong hold which this gifted young statesman has upon the affections of his own western countrymen. After thanking the audience for their kind reception of his name, he proceeded to express his pleasure as a citizen of Regina in welcoming the delegates of the Board of Trade Convention. There was no need to waste time in dilating upon the advantages of such a convention as they are quite obvious.

"I am glad that if this is to be the last gathering of a Territorial convention, there is still to be a western convention. Somewhat unnecessarily in my

Courtesy Regina "Leader."

opinion we are to be divided politically, but our interests are the same on both sides of the imaginary line, by means of which the Dominion Parliament intend to separate us, and I hope there will be no division of this association.

"Strangely enough my name is associated with the only toast with which I have nothing whatever to do. I am not a member of Parliament and I don't know very much about Parliament. Moreover, my recent acquaintance with it does not cause me to think very highly of it. (Laughter.) I am not a member of any Provincial Legislature, but as some one has said, 'I 'as 'opes.'

"It is in the Northwest Territories Legislature that my political experience has been gained, and of it I desire to speak a few words. We are told we should speak nothing but good of the dead, and perhaps the same rule should apply to the dying and practically dead. I may be pardoned for being proud of the record of that Legislature. Of course we made mistakes; we were human representatives of very human constituencies. But I believe that no body of men have ever met with a greater sense of their responsibilities or a more single-minded idea that there was important work to be done. This may sound like bombast, but you must allow the dying swan to sing his song.

"The growth of the Territories has been gradual and steady, and so has been the legislative and constitutional growth. A great change is coming and I only hope that the new Legislature will grapple with public questions as ably and honestly, as sincerely and as resolutely as the old.

"It was the glory of the old Legislature that we tried to do business with regard to that business alone; we did not draw the party lines. From 1888 until 1905, in a country where politicians are numerous and party feeling often is very strong, a body of men have been elected who set aside party traditions and worked together for the common good of the west. That was the glory of the old Legislature, and I hope it will be the praise of the new. We have no time here for party politics, for we have too much to do. In a material sense the transportation problem is the greatest question in this country. In my opinion the great project which is coming up for the consideration of the two new provinces and the old Province of Manitoba is that of a Hudson's Bay railway. I firmly believe that this road is coming and that when built it will revolutionize conditions here. It will not interfere with the railways we have already; they will still be necessary. This is the great question that is coming, but this is not the time or place to speak of it."

Our Guests.

Vice-chairman Laird now took charge of the toast list and proposed the toast to "Our Guests," coupling with it the names of President Tweed, of Medicine Hat, Mayor MacKenzie, of Edmonton, W. H. Cushing, of Calgary and A. MacCaul, of Indian Head.

Mr. Tweed, in a humorous address, begged to be excused as he had been sitting close to the chairman and was "under the influence of Mytton." The guests had all been delighted with their visit to Regina and could not say enough to express their gratitude for their kindly reception. Like Premier Haultain, he hoped they would meet again as a united body, and if, as was suggested, they meet next time in Edmonton, he did not doubt they would have a "capital time" no matter what Calgary might say to the contrary.

Mayor MacKenzie, of Edmonton, also claimed to be in a jaded condition, but made a "capital" speech. He was glad to hear Premier Haultain suggest that the Boards of Trade stay together in one association in spite of the imaginary line which was to divide the Territories into two provinces. Personally he hoped the association would extend its scope to include Manitoba, for the whole of the country between the lakes and the mountains has similar interests, and its Boards of Trade may well be united.

Messrs. Cushing, of Calgary, and MacCaul, of Indian Head, both spoke briefly along the same lines.

Trade, Commerce and Agriculture.

With the toast to "Trade, Commerce and Agriculture," Vice-chairman Laird coupled the names of Messrs. A. L. Johnson, president of the Winnipeg Board of Trade, Clinkskill, of Saskatoon, W. B. Willoughby, of Moose Jaw, and T. H. Blaicklock, of Weyburn.

Mr. Johnson spoke briefly and to the point. He was glad to see so little sectionalism in the proceedings of the convention. The Winnipeg Board of Trade was free from the spirit of sectionalism and in its deliberations he thought it considered only the general interests of the entire west.

"Our interests are mutual in the west," said the speaker, "and what builds up the Territories helps to build up Winnipeg."

In humorous vein Mr. Johnson disclaimed all knowledge of agriculture. The farmer, he knew, was the backbone of the country, for he wears the shoes which his (Mr. Johnson's) firm sell, and he rides on Mr. Peter's C.P. Railway.

Mr. Clinkskill dilated at considerable length upon the glories and advantages of his own town Saskatoon, which he hoped many of the delegates would visit. He also dealt very effectively with the immigration problem and the unoccupied homesteads which are held by speculators, thus hindering the development of the country, its trade, its commerce, and its agriculture.

Messrs. Willoughby and Blaicklock also spoke briefly to the same toast.

City of Regina.

R. J. Hutchings, of Calgary, then proposed a toast to the City of Regina, and took occasion to thank the mayor and the officers of the Board of Trade for their kindness and courtesy. The mayor replied briefly on behalf of the city.

The Ladies.

A toast to the ladies of Regina brought the gallant Premier to his feet to respond, and his rising was the signal for another ovation.

The gathering dispersed about 3 a.m. after singing "Auld Lang Syne."

CONVENTION NOTES.

Regina is a hospitable city.

Saskatoon has ambitions to be capital of Saskatchewan.

"Abbott from Maple Creek" was the wit of the convention.

Hon. Frank Oliver has a namesake at Saskatoon who was a delegate to the convention.

On Thursday afternoon the ladies of Regina entertained the delegates at an informal garden party in the park.

Delegates carried away many souvenirs of that fertile Regina mud, whose wheat growing properties are so well known.

Local jealousies cropped up occasionally, but upon the whole the convention was remarkable for the harmony displayed.

H. E. Mytton was a capable chairman at Thursday night's banquet. Those "under the influence of Mytton" seemed to enjoy themselves.

Saskatoon provided a special train and invited the delegates to visit the ambitious northern town and attend a banquet on Saturday night.

President A. L. Johnson, of the Winnipeg Board of Trade, was present at the convention on Thursday and Secretary C. N. Bell attended on Friday.

The delegates and the press were extended the privileges of the Assiniboia Club during their stay in the city, a courtesy which was much appreciated.

The noticeable feature at Thursday night's banquet was the wonderful popularity of Premier Haultain. Those who know him best apparently appreciate him most.

Secretary Trant was untiring in his efforts to provide for the wants and comfort of the delegates and very much of the credit of a successful convention is due to him.

On Friday morning there was on exhibition on the press table a sample of Spring wheat from the farm of Wm. Reddick, of Maple Creek. It measured 41½ inches in length.

William Pearce, of Calgary, is an old-timer who had probably the most intimate acquaintance of any man at the convention with conditions in all parts of the west. His opinions were always listened to with respect.

A strong sentiment in favor of government ownership of public utilities was a notable feature of the gathering. Messrs. Mytton and Cushing were the principal opponents of such ideas, but the majority of the convention were opposed.

The fire brigade gave a good exhibition on Friday night, throwing streams of water which Winnipeg would find it hard to equal. Regina has accomplished the seemingly impossible for a prairie city—she has an excellent waterworks system in which the pressure is supplied by the force of gravitation.

His Honor the Lieut.-Governor and Madame Forget entertained the delegates at a garden party on Friday evening at Government House grounds. The reception committee assisting Madame Forget consisted of Mrs. McCullough, Mrs. Peverett, Mrs. Ford Jones and Mrs. Bulyea.

During the convention the chairman wisely suggested that all speakers should give their name and Board of Trade on rising to address the meeting. This was a sensible request, but it was not always followed. "Coupland from Saskatoon" and "Mytton from Regina" created some merriment by always announcing their name and town.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 71.)

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, July 7, 1905.

NO sign of dullness has yet set in. A glance at the big shipping rooms in the wholesale houses will see piles of all kinds of hardware going to all parts of the Dominion. Immense quantities of sporting paraphernalia and shooting accessories also will be noted, fishing tackle, too, and no end of apple parers and garden as well as harvesting tools.

Despite the continuation of the carpenters' strike in Montreal things have not been marred. The contractors have not been deterred in finishing the mass of their work, and building hardware is selling freely. The advance on shovels of all kinds has been maintained, and, notwithstanding, trade is good. Barb wire, staple screws and rivets are firm and in good demand.

Axes—A steady business continues, and prices are firm. We quote: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—The demand keeps up, and prices are firm. Our quotations are as follows: Axe handles, No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No 3, $1.50 a dozen.

Sewing Machines—Trade is first rate, and a number of high-grade machines seem to be in popular demand. We quote as follows: Hand sewing machines, $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns—A good demand is in evidence, and prices are firm. We quote: Cold blast, $4.50; No. 0 Safety, $3.50.

Barb Wire—Plenty of stock being sold at good prices. We quote: $2.75 for 100 lbs. f. o. b. Montreal; $2.37 1-2 f.o.b. Cleveland. Carlots of 15 tons, $2.25 f.o.b. Cleveland.

Fence Staples—Activity in all grades is the order, and business is good at firm prices. We quote: $2.65 per 100 lbs. keg, for bright, and $3 for galvanized; 25 to 50-lb. packages 25c. extra.

Rivets and Burrs—No change has taken place in prices, and business continues alive and steady. We quote: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. cartoon boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—Firmness rules, with trade inclined to be quiet. We quote: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—The reduction of last week in sleigh shoe bolts has been maintained with the following discounts: Three-eighths and smaller, 60 to 10; seven-sixteenths and larger 55 to 5. Activity rules.

Wire Nails — Demand has eased slightly, and a quieter tone has been noticed this week. We quote: $2.25 a keg f.o.b. Montreal.

Horseshoes—Business is light and trade is fair. Prices are firm. We quote as follows: P.B. New Pattern, base price, $3.50 per 100 lbs.; M.R.M. Company latest improved pattern iron shoes, light and medium pattern No. 2 and larger $3.65. No. 1 and smaller $3.90, snow pattern, No. 2 and larger $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller $4.15; featherweight, all sizes 0 to 4, $5.50; toe weight, all sizes 1 to 4. $6.75. Packing—Up to three sizes in a keg ten cents per hundred pounds. More than three sizes twenty-five cents.

Horse Nails—Prices remain unchanged with good trade.

Sporting Goods—A good demand is in vogue with firm prices holding much the same as last week. We quote: Canadian-made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—No glaring interference has set in owing to the strike among the carpenters, and trade continues to be pursued with due aggression. Prices are unchanged.

Cordage—Prices remain the same, and demand is brisk with firm holdings.

Cement and Firebrick—The decline in prices still holds. Trade is fair, but inclined to be quiet. Our quotations are, as follows: English cement, $1.80 to $1.90: Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2.00 to $2.10 ex-cars; Canadian Portland, $1.90 to $2.00. Firebrick, English and Scotch $17 to $21, American $30 to $35.

Coin Chain—Prices remain firm with steady business. Our quotations are as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, 3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Green Wire Cloth—The price is $1.50 per hundred square feet, but little business is doing.

Poultry Netting—The goods are still scarce, and the demand increases. We quote: Discounts for two inch nineteen gauge standard, and sixteen gauge extras, at 60 per cent.; finer meshes, 55 per cent.

Spring Hinges — Good business is everywhere to be noted, and higher grades are in excellent demand. No. 5, $7.25 per gross; No. 19, $18 per gross; No. 20, $18.80 per gross; No. 120, $20 per gross; No. 51, $9.25; No. 50, $27.50.

Apple Parers—Business is unprecedented and is continually increasing. We quote: Little Star, $4.85; Hudson, $5; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, July 7, 1905.

CHANGES have taken place in coiled spring wire and cement during the week, the former being ten cents less than formerly, and the latter about ten cents higher. Other prices remain stationary.

Business was interrupted slightly by the holiday, but still holds remarkably active, and no complaints are heard from any source. Sorting-up orders are coming in more liberally than ever, and jobbers are having their difficulties in keeping up with their shipments.

The demand for lawn mowers and Summer lines keeps up exceptionally well. Farmers are buying lawn mowers in large numbers, and country merchants are forced to carry larger stocks. Everything that sells in the Summer time is in brisk demand.

Lawn Mowers—Farmers are buying more mowers, and the demand keeps up very well.

Sporting Goods—Fishing tackle and camping outfits are having a good sale, while shooting materials are improving.

Washing Machines—Trade is reported very good for wringers and machines.

Chain—Trade is in its normal state. We quote: 1-4 inch, $6.50; 5-16 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Step Ladders—Business is considered very satisfactory. We quote at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders.

Extension Ladders—Sales are reported

to be fairly large. Waggoner, 40 per cent. off list.

Galvanized Wire—Large orders are reported by the jobbers. We still quote: $2.37 1-2 f.o.b. Cleveland.

Coiled Spring Wire — Prices have fallen 10c. Demand is active. Poultry netting is also in strong demand.

Barb Wire—Sales continue very large, and farmers are buying large quantities.

Wire Nails—Stocks are being called upon heavily. Nominal quotations are $2.25 f.o.b. Toronto.

Cut Nails—Activity in building is causing a strong demand for goods. Prices are firm. Quotations are $2.40 per keg f.o.b. Toronto.

Horseshoes—Trade is falling off owing to the Summer season. We quote as follows: "P. B." base. $3.65; "M.R.M. Co., latest improved pattern" are: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horsenails—Demand during the Summer season is less active. Prices are the same.

Screws—Manufacturers are keeping up with the demand fairly well and no shortage is looked for.

Rivets and Burrs—Demand is reported good at unchanged prices.

Bolts and Nuts—Stocks are being called upon largely, but the supply is plentiful. Prices are unchanged.

Cordage—Sorting-up orders are the rule, with some orders for binder twine still coming in. We quote as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30 to 32c.; "Star," 36 to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white 11 to 13c.

Cement—The recent advance in the United States has been duplicated here, and better prices are now the rule. The active demand makes the market very firm. We quote as follows: For carload orders f.o.b. Toronto, Canadian Portland, $1.95 to $2; American Portland, $1.95 to $2. For small orders ex warehouse: Canadian Portland, $2.20 to $2.25; American Portland, $2.20 to $2.25.

Firebrick—An increased business is noted. Prices are firm. We quote as follows: English and Scotch firebrick, 27 to 30c.; American low-grade, 20 to 25c.; high-grade, 27 1-2 to 37 1-2c.

Building Paper—The general activity in the building trades keeps the demand for goods steady.

Hides, Skins, Tallow and Wool — The trade report receipts light owing to the high prices being paid in the country. The London wool sales show 10 p.c. advance in coarse crossbreds, but this advance has been fully anticipated for the last three of four weeks. We quote the following:

Hides, No. 1 green steers, per lb	0 10
" " 2 " " "	0 09
" No. 1 green, per lb	0 09½
" " 2 " "	0 08½
Country hides, flats, per lb	0 08½ 0 08¾
Calf skins, No. 1, selected	0 10
" " No. 2	0 08
Deacons (dairies), each	0 80
Sheep skins	1 25
Lamb skins, each	0 35
Shorn pelts "	0 45
Rendered tallow, per lb	0 04 0 04½
Unwashed wool, new clip, per lb	0 15
Wool-washed fleece	0 23
Pulled wools, super, per lb	0 21 0 23
" " extra "	0 22 0 24

For Manitoba, British Columbia and Maritime Provinces markets see following pages.

—

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, July 7, 1905.

MARKED activity rules still. No sign of a Summer decline can be traced by knowing ones, and this is declared to be unusual. Large firms are busier than the time of year warrants, and this is attributed to the building activity and the general manufacturing stimulation. There has been no change in the price of piping of all kinds, but the demand is unprecedented. Copper remains high. Antimony is soaring still, and no indication of a decline. Tin plates are firmer, and the tin market generally has held up remarkably well. Ingot copper has a firmer tone, and there are no signs of it weakening. Ingot zinc is still easier, and the shading on large quantities continues to hold. Pig lead has advanced to $3.60, making it considerably higher than it was for many months. This is attributed to the shot makers and other makers of lead goods having excellent business.

Pig Iron—The tone of the market is decidedly stronger, and the prophesied advance may be said to have occurred, although it is hardly safe to change the current quotations. A fine business is being done. We quote:

"Disc," No. 1	$16.50	delivered	Montreal.
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18 00	delivered	Montreal.
" No. 2	17.50	"	"
" No. 3	16 50	"	"
" No. 4	16.00	"	"
Londonderry	$18.50 to $19.00	"	"
Glengarnock	18.25	"	"
Gartsherrie	19.25	"	"
Carnbroe	18.50	"	"
Carron No. 1	19.00	"	"
" (special)	18.00	"	"
Ayresome No. 1	18.25	"	"
" No. 3	17.50	"	"
Summerlee	18.50 to 19.00	"	"
Clarence No. 1	17.50	"	"
" No. 3	17.00	"	"
No. Cleveland	17.50	"	"

Bar Iron—Slightly easier is the report, and the decline of two weeks ago has been well maintained. We quote: Merchant bar, $1.80; horse-shoe iron, $2.02 1-2; forged iron, $2.05; best refined iron, $2.20 net cash thirty days.

Tool Steel—The awakening in tool steel is decided, and one only needs to look at the papers to see large firms like Drummond McCall advertising special tool steel to note the demand and the competition. The purchase in Canada of the Pneumatic Tool Steel Co. by an American company geos to testify the demand. Our quotations are as follows: Colonial and Black Diamond, 8c to 9c; Sanderson's, 8c to 45c, according to grade; Jessop's, 13c; Jonas & Clover's, 10c to 20c; "Air Hardening," 65c per lb.; Conqueror, 7 1-2c; Conqueror High Speed steel, 60c.

Merchant Steel—Quietness is ruling just now, but still the demand is fair, and prices remain unchanged. We quote as follows: Sleigh shoes, $1.97 1-2; tire, $2.07 1-2: spring, $2.75; toecalk, $2.62 1-2; machinery iron finish, $2.10; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold-Rolled Shafting—Many forces are at work to increase the demand all the time, and certainly building and machinery plant equipment, as well as the electrical contract work, have had their effect. Trade is good, and prices are firm. We quote: Cold-rolled shafting, 3-4 inch to 17-16, $3.85 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Canada Plates—While no change is to be recorded, these goods are firm and in excellent demand, with a tendency to advance in the near future. We quote as follows: 52's, $2.35; 60's, $2.40; 75's, $2.45; dull polished, $3.60; galvanized, 52's, $3.90 to $4; 60's, $4.15 to $4.25.

Galvanized Iron—Solid business is the order, and a never ceasing demand controls the trade. We quote as follows: Queen's Head, 28 gauge, $4.15; 26 gauge, $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 to 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c extra.

Black Sheets—Incident to the impetus to manufacturing, the black sheets are selling freely and everywhere in the trade good prices are maintained and activity rules. We quote as follows: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—How long the advance in antimony may hold has now become a subject for conjecture. It is generally believed that it will hold for some time, and it is quite within the realm of possibility that higher prices may be quoted before lower ones. We quote 11 3-4 to 12 cents.

Sheet Zinc—Steadiness rules, and a good market is reported. Plenty of business is reported. We quote: Cask lots, $7; small lots, $7.25.

Tin Plates—Tin is holding up well. The market has surprised all the big dealers and it is notable that the actual and possible issue would suggest an advance. We quote: Cokes, $3.75; charcoal, $4.

Ingot Tin—A firmer market has been

recorded, and the Old Country markets are quite considerably stronger. Consumption is in no way curtailed, but it seems to have increased and trade is good. We quote: Present prices range from 33 to 33 1-2c.

Ingot Copper—Firmer in all grades is the order, and no sign of it weakening so that buyers who anticipated a decline may profit by the judgment of experts, who represent some of the largest handlers in the business. We quote: 16 to 16 1-4c.

Ingot Zinc—A somewhat easier market is in vogue, but the demand is good and prices remain unchanged. We quote: 6 to 6 1-4c.

Pig Lead—Once more an advance of five cents has taken place, and the demand has not even slackened. We quote: $3.50 to $3.60.

Boiler Tubes—The general firmness which permeates the metals has affected the boiler tubes and a firm market has held all the week. The demand has increased, and makers are pleased with the outlook. Our quotations are as follows: British and American tube, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12 1-4; 3 1-2 inch, 16c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Scrap Metal—Quietness has overtaken this trade just now, as their best three months have just passed. Copper and brass continue to hold firm positions, but the volume of business done has slackened. We quote as follows: Heavy copper and wire, 12 3-4c.; light copper, 11 1-2c.; heavy red brass, 10 1-2c.; yellow brass, 8 3-4c. to 9c.; light brass, 6c.; lead, 2 1-2c.; zinc, 3 3-4c.; machinery cast scrap, $14; wrought scrap, $13; stove-plate scrap, $10; No. 1 country rags, 75c. to 90c. per hundred lbs.; old rubbers, 5 1-4 to 5 1-2c. per lb.

ONTARIO.

Office of HARDWARE AND METAL,
Front street east,
Toronto, July 7, 1905.

EVERYTHING is steady, and a fair business is reported by the trade. The holiday caused a slight falling off, but the expected falling off in July and August has not materialized yet. Tin is advancing, and antimony is still going upward It is reported from reliable sources that the Japanese Government is a buyer in Europe for 500 tons of antimony, and with Russia also a large buyer and with the output of metal decreasing, it is impossible to tell how high prices may go.

Pig Iron—Increasing strength is shown and prices are held very firm. We still quote:

Middlesboro, f.o.b., Toronto	$20 00	$20 50
Hamilton, No. 1, at furnace	18 00	18 50
" No. 2, "	17 50	18 0
Midland, No. 1, "		18 50
" No. 2, "		18 00
Radnor, at furnace		30 00
Londonderry, at furnace	16 50 to	17 00

Bar Iron—Sales are being made in fair volume, and prices are being maintained. Our quotations are as follows: $1.85 f.o.b. Toronto, with discount of 2 per cent.; for extras as cut to length, while rolling, 2 feet and over, 10c. per 100 lbs., 1 foot and under 2 feet, 15c.; under 1 foot, 20c.; over 20 feet, by special agreement according to length and size.

Tin—An advance of 30c. per hundred is reported during the week. Buying is active and prices very firm. We quote: 34 to 35c. per lb.

Galvanized Sheets—Conditions are unchanged, the demand being heavy.

Tin Plates—Firmer prices are reported with the demand strong.

Canada Plates—Goods are being called for in fair quantity. Prices are the same.

Brass—Trade continues active and prices firm. Discounts are 10 per cent.

Lead — Higher prices are reported. Stocks are light and demand steady. We still quote: Pig lead, $3.80 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter — Conditions are unchanged. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—An active demand exists with the same quotations ruling. We quote as follows: Ingot copper, 15 3-4 to 16c. per lb., and sheet copper, 21c. per lb.

Antimony—Prices are still advancing, another cent being added to last week's figures. We now quote at 14c.

Old Material—A slight improvement is noted although no lines are very active. Prices are steady. Dealers buying prices are as follows: Heavy copper and wire, 12 1-2c. per lb.; light copper, 11c. per lb.; heavy red brass, 10 1-2c. per lb.; heavy yellow brass, 8 1-2c. per lb.; light brass, 6 1-2c. per lb; tea lead, $2.40 per 100 lbs.; heavy lead, $2.60 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $9 to $10, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 5c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Dealers are booking orders for Fall delivery, their stocks being fairly large. We quote: Anthracite in cars at bridges: Grate, $5.05 per gross ton; egg, stove and nut, $5.30 per gross ton; pea, $3.70 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35: 3-4 inch, $1.25; run of mine, $1.05: nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, July 5, 1905.

Pig Iron—Middlesboro No. 3 foundry is quoted at 45s. 6d. and Scotch warrants at 49s. 4d, making prices as compared with last week unchanged for Middlesboro and unchanged for Scotch warrants.

Tin—Spot tin opened firm at £140 2s. 6d, futures at £139, and after sales of 170 tons of spot and 150 tons of futures closed firm at £140 2s. 6d or the spot and £139 2s. 6d for futures, making price as compared with last week 2s. 6d higher on spot and 5s. higher on futures.

Copper—Spot copper opened firm at £66, futures £66 1s. 3d, and after sales of 150 tons of spot and nil tons of futures closed firm at £66 or spot and £66 3s. 9d for futures, making price as compared with last week 2s. 6d lower on spot and 3s. 9d higher on futures.

Lead—The market closed at £13 8s. 9d, making price as compared with last week 2s. 6d higher.

Spelter—The market closed at £23 17s. 6d, making price as compared with last week 2s. 6d lower.

UNITED STATES METAL MARKET.

Advance proofs furnished HARDWARE AND METAL by The Iron Age, July 6, 1905.

THE feeling in the iron trade generally is distinctly hopeful and yet there is little that is tangible to justify increased optimism. Those branches which saved the situation after the check of the late Spring are still the backbone of the good times. These are the structural and the plate trades, which are flourishing through the railroad buying of cars and engines and the heavy requirements for buildings, bridges and ships for the lakes. As an indication of the volume of business being done the fact may be mentioned that the American Bridge Co. alone booked orders for bridges, buildings and structures aggregating 71,000 tons during June. In New York contracts for buildings involving 15,000 tons of structural material were placed during the week. Chicago did a good business and has some large work in sight. In the plate trade, mills in the central west have been forced through sheer inability to make deliveries to transfer work to eastern mills.

Some good rail orders have been placed lately, including 15,000 tons with one mill in the central west and 30,000 tons with an eastern plant.

The event of the week in the lighter lines has been the adjustment between the American Sheet & Tin Plate Co. and the Amalgamated Association of both the sheet and the tin plate scales. The men receded completely from their demands for an advance in wages and accepted substantially the existing scales. One very important point was made, and that is that the clauses relating to restrictions of output were eliminated. This has been a very sore point with those manufacturers whose mills were under union rule.

The rebate of 1½ per cent. in wages on tin plates intended to supplant foreign plates imported under the drawback clauses continues to August 1. After that date it may be restored by the company to the original 3 per cent. rebate if conditions require it.

The settlement of the wages question in these two important branches removes practically the only cloud on the horizon. From a market point of view only a prolonged struggle could have affected values.

There are indications that at least one large consuming interest in the foundry trade has begun to feel the market for pig iron seriously, but that is the exception. The deadlock is really unbroken, and the drift of events seems to

favor the buyers, since southern iron has weakened further and some smaller interests have accepted the basis of $11 for No. 2 foundry at Birmingham. The leading interests in all the principal producing sections, however, are abstaining from any attempt to force pig iron upon unwilling buyers. It will take some striking event to start the buying movement, some merchants believing that we may drag along in this manner for the whole of this month.

Bids are being opened to-day in this city for a round lot of cast iron pipe. Kansas City has just awarded 6,000 tons.

PITTSBURG METAL MARKETS.

Iron Trade Review, July 6, 1905.

IRON and steel trade conditions at the beginning of the second half are the reverse of those existing the first of the year. At that time there was heavy buying of all finished lines, and pig iron was advancing. There was also considerable buying of the heavier forms of material, but it was not generally believed that the tonnage of plates, shapes and rails would reach the present enormous total. Practically all forms of finished material and pig iron, on the other hand, instead of advancing in price, as was generally expected, have declined, and the second half of the year opens with a dull market for these commodities. The activity in the heavier lines, it is generally believed, is sufficiently great to instill confidence in the general situation and a revival of demand for finished products, and pig iron is anticipated before the end of the Summer.

Pig Iron—The market continues exceedingly quiet. Consumers are urging deliveries on existing contracts, indicating a heavy consumption, and there is little doubt but that they will be compelled to buy for future requirements shortly. Southern iron is now offered openly in this market on the basis of $11.25, Birmingham, for No. 2, and there is little doubt that $11 could be done on a large tonnage. Valley furnaces are quoting $14.25 to $14.50 on No. 2, while Bessemer and basic can be had at $14. We quote:

Bessemer, Valley	$14 00 to $14 25
Bessemer, Pittsburg	14 85 to 15 10
No. 1 Foundry	16 00 to 16 25
No. 2 Foundry	15 35 to 15 60
Gray forge, Pittsburg	14 60 to 14 75
Basic, Valley	14 00 to 14 25
Basic, Pittsburg	14 85 to 15 10

Steel—On Bessemer billets the leading steel mills are now quoting the official price of $21, but consumers are not anxious to close on this basis, despite the offers of the steel producers to cover their requirements for the next six months. Open-hearth billets still command a premium on account of the big demand for this grade of steel, and are quoted at $23. Bessemer and open-hearth sheet bars are quoted at $23.25 to $24, while Bessemer and open-hearth rods are in little demand at $32 to $33.

Ferro-Manganese—The market continues quiet, foreign ferro, 80 per cent, being held at $49.50 to $50, delivered at buyer's mill.

Manufacturers of
Ferrona Pig Iron
And SIEMENS-MARTIN
OPEN HEARTH STEEL

throughout this district have been closed for the week, and a few will remain idle throughout the month. We quote neutral bars for prompt delivery at $26.50, Youngstown, while for future delivery $26 can be done.

Skelp—The market continues quiet. Steel grooved skelp is quoted at 1.45c. to 1.50c., and sheared at 1.55c. Grooved iron is held at 1.60c. and sheared 1.65c.

Rails and Track Material—Rail tonnage continues heavy. The light rail market continues quiet, and prices are still low.

Plates—Steel car works' requirements still lead, although the demand from miscellaneous industries is improving considerably. Deliveries on open-hearth cannot be made in less than four months, although 60 days can be made on most Bessemer sizes.

Structural Material—While little new business has been placed, all of the mills are filled with orders and are unable to make deliveries on certain sizes in less than four months.

Bars—A few small contracts for steel bars covering requirements for the last half of the year have been closed by local mills on the basis of 1.50c., but the large consumers are not asking for prices and the indications are that they will not buy until later in the year. The demand for bar iron on the part of the railroads continues heavy and local mills report a good tonnage on their books.

Sheets—After practically all of the union sheet and tin plate mills closed at midnight Friday on account of the expiration of the scale year and the outlook for a prolonged strike was favorable on account of the failure of the wage committee of the Amalgamated Association and the officials of the American Sheet & Tin Plate Co. to reach an agreement, a settlement of the wage matter was effected on Monday. While a number of mills will remain idle for several weeks, there will be a pretty general resumption before August 1, and jobbers of both sheets and tin plate who were holding their stocks firmer in anticipation of a strike this week are again offering their material at the concessions existing before the wage scales came up for consideration.

Wire and Wire Nails—Most of the wire and nail mills in this district have been closed and the nail mills will not resume for a month. The wire mills, on the other hand, are scheduled to resume in about two weeks. Concessions of about $1 a ton continue to be reported, and current demand is light.

We quote: Wire nails, jobbers' carload lots, $1.80; retailers' carload lots, $1.85, and less than carloads, $1.95; painted barb wire, $1.95 for jobbers in carloads; retailers' carloads, $2, and less than carloads, $2.10, with 30c. for galvanizing. Annealed smooth fence wire is held at $1.65, with the usual differentials to retailers for carloads and less than carloads. Quotations are all f.o.b. Pittsburg, 60 days, with 2 per cent. discount for cash in ten days. Iron and steel cut nails, $1.70 to $1.75.

Merchant Steel—Demand for high-grade steel is fair for this season, while the shafting manufacturers report their product in good demand.
and trading is largely limited to the

Old Material—The market continues absolutely lifeless. Consumers will not buy until they see bottom on pig iron dealers. We quote gross tons as follows: Heavy melting stock, $14 to $14.50; No. 1 wrought, $14.50 to $15; re-rolling rails, $14; bundled sheet scrap, $12 to $12.50; busheling scrap, $12 to $12.25; turnings, $9 to $9.25, and cast scrap, $13 to $13.25.

Coke—Coke production continues to be curtailed. There is practically no buying of furnace coke, and prices are somewhat easier, good Connellsville product being offered as low as $2 for the last six months. Foundry coke is held at $2.25 to $2.35.

British Columbia Trade News

Vancouver, B.C., June 23, 1905.

THE rights, powers and privileges of telephone companies are under earnest discussion at the present time in the City of Vancouver, because the British Columbia Telephone Co., Limited, is undertaking to dig up streets and lanes without the permission of the city, for the purpose of putting down conduits in which to lay wires. The city authorities do not wish to object to the laying of the tefephone wires underground, but they do wish to have it distinctly understood that the work cannot be done without the city's permission. The matter is subject of court proceedings, an injunction having been applied for by the city, and in addition the employes of the company have been arrested for tampering with city streets without permission. This step will be repeated every time the employes make the attempt, because the telephone company would not consent to stop work till the argument re the injunction was disposed of.

As the powers claimed by the telephone company are sweeping, and along the lines which were so keenly opposed by the Union of Canadian Municipalities in the Dominion House a year ago, the case is likely to become interesting to all cities and towns. If the claims of the company are established it abrogates all power on the part of civic corporations respecting the giving of consent to poles being erected, or wires laid underground on the streets.

* * *

A new street car system, operated by electric power, is to be chartered in British Columbia, the municipality of North Vancouver, across Burrard Inlet (the harbor of Vancouver) having come to a tentative agreement with the British Columbia Electric Railway Co., granting a franchise for fifty years, five miles of track to be built at once. The company operate the lines in Victoria, Vancouver, New Westminster, and the interurban lines between the latter two cities.

* * *

The B.C.E.R. & L. Co. have announced, through Manager Buntzen, that organized efforts will be made to induce capital to invest in new industries in this part of the province, by showing the advantages of cheap electric power now available. The completion of the power canamm mm mm mm mmmmmm power tunnel of the Vancouver Power Co., a subsidiary company, renders available a total of 30,000 h.p. in electric energy. The tunnel has been an entire success, and, while bringing sufficient water from Lake Coquitlam into Lake Buntzen to generate the power mentioned, it has not materially affected the level of the former lake, which is very much larger.

* * *

At the present time a new saw mill of large dimensions, a tannery, a fruit cannery, and other enterprises, are being established in New Westminster.

* * *

Owing to the expansion of railway business the C.P.R. are extending their local yards in Vancouver, and two hardware firms, Messrs. McLennan, McFeely & Co., and the McClary Mfg. Co., have been served with notice to vacate premises they have on leased land owned by the C.P.R. next Pender street, to make room for new switches.

* * *

With power available for all demands upon it, the British Columbia Electric Railway and Light Co. are now in position to treat for the location of industries in the City of Vancouver, in the City of New Westminster, and in suitable locations near those cities. The first move has been to establish a new street car system in the thriving municipality across the Inlet from Vancouver. Another was the proposal to locate flour mills here, the promoters of that scheme having asked for terms on 500 h.p., and are prepared to go on with the mill if terms are suitable.

* * *

Industrial enterprise is assured of favorable consideration in the City of New Westminster for all time to come, and the city is also assured of its right to lease and tax property on the waterfront, by a recent ruling of the Provincial Government from which title first issued to the land, some of which has been in dispute. Owing to rapid industrial development the waterfront of the Fraser River in the City of New Westminster has become very valuable and will be a revenue-producing asset for the Royal City for all time.

Nova Scotia Trade News

Halifax, N.S., July 4, 1905.

BUSINESS is looking up and jobbers say that orders which should have been in six weeks ago are now only coming to hand. This, however, is having its good effect as the orders comprise more goods than hitherto would have been purchased, as the buyer is making the shipment. There is a great scarcity of money throughout the country. The farmers are short of ready cash, but the crops are all reported good, and the prospects are as bright as could be wished. In consequence of this the dealers have no hesitation in filling orders. Collection continues about fair.

Prices here show very little change. Turpentine is quoted at 98c. The jobbers do not care about quoting figures on turpentine. The price of this article continues to be well maintained here, notwithstanding the drop in prices elsewhere. Boiled oil is quoted at 60c., and raw oil at 55c. Cement is steady at $2.25 per barrel for White Bros. Nails remain about the same. Best Manila rope is quoted at 15c. base, and British at 11½c.

Bar iron continues in good demand at $2.10 base. Block sheet iron is a little easier, being quoted at $2.25. Sheet zinc and sheet lead are very firm and

both are reported to be very scarce here, the dealers having only small stocks on hand. Ingot tin is firm at 36 cents. The demand for pig lead is good, and the price firm, being quoted at $3.75 to $4. Considerable steel is being sold at $2.40 for tire, $3.20 for caulk, and $3 for machine, all base.

All lines of building materials are in good demand. Tarred felt is selling for $1.85 per hundred pounds, three-ply roofing at $1.15 per roll, and two-ply at 90c. per roll. Tarred sheathing 50c. There is a good buying demand for all kinds of haying tools, especially scythes.

The Eastern Trust Co., of Halifax, receiver for the Port Hood Coal Co., has been authorized by the court to raise $50,000 on the security of the coal company's property to carry on the business, and work at the mines will probably be resumed at once.

One of the new Allen shafts being sunk by the Acadia Coal Co., between Stellarton, N.S., and New Glasgow, recently attained a depth of 890 feet, and at that point a coal seam was cut which it is hoped is the famous Ford seam, for which the company had been seeking. The Ford seam ceased to be a producer years ago, owing to a disastrous fire, and since then all efforts to recover the seam by means of slopes were unsuccessful, as fire was met with.

It is understood that when the Dominion Iron & Steel Co. commence to roll plates later on, suitable for the purpose, that Messrs. Rhodes, Curry & Co. will undertake the manufacture of pressed steel cars at Sydney, C.B.

If prospective builders only knew the possibilites and advantages of "Metallic" building materials, they would use nothing else.

Wood is getting more and more expensive and it never was equal to good sheet metal.

Don't you think such facts would bring you new trade if brought to the attention of prospective builders in your town?

"Empire" Metallic Shingles are a good example of what we have done in the production of a rust, fire, rain, weather and lightning proof roofing that lasts a life time. It is an easy matter to get orders when their advantages are shown.

Many dealers are making money by showing our catalogue and pushing "Metallic" goods with prospective builders.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopedia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto, Canada 302

We also manufacture:
"Eastlake" Metallic Shingles
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts
"Metallic" Siding (Stone, Brick, Etc.)
"Impervia" Fireproof Windows
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Metallic" Eavetroughs and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

New Brunswick Trade News

St. John, N.B., July 7, 1905.

THE prevailing tone in hardware circles of late has been one of comparative dullness. By that it is not meant that trade has been bad but rather that it has been quiet with no special features. That it should be so at this season of the year is not strange.

The outlook is that when Fall comes business will be considerably brisker, for the crop reports seem to foreshadow a successful season for the farmers. If the forecasts are correct there will be a good demand for agricultural implements in the late Summer and through the Fall, and the successful season for the farmers is bound in the nature of things to cause a brightening up in all branches of trade.

One phase of the industrial outlook in the province forms something of a cloud on the business horizon. That is the unsatislactory condition of the lumber outlook. At the present large quantities of logs are held up on the head waters of the St. John river, and even at some of the upper points of the main river. If these are not soon brought to the city some of the mills will be forced to shut down quite a bit earlier than usual. The loss such a step would cause the mill owners can readily be seen, and the closing of the mills would mean a tightening of the purse strings of the mill hands, the effect of which would soon be apparent in many circles of trade. However, some of the mill men profess to believe that the logs will come down all right shortly, so anxiety is perhaps as yet quite ill-advised.

The local authorities have recently put into force a regulation which is bound to affect the tinsmiths of the city. This regulation provides that "pegged" measures cannot be manufactured nor used any longer. These measures are those in which metal pegs are inserted in the sides to make it possible to measure less than the whole quantity which the measure is supposed to hold. Such measures have been made and used here to a considerable extent, but the objections to them will be seen at a glance. The penalty for their manufacture and use is quite severe, so they will probably disappear before long. The tinsmiths do not, of course, object to the new regulation, as under it their sales will be considerably increased. Milkmen and other users of liquid measures do not view the law with the same satisfaction for obvious reasons.

The demand for building materials is good at the present time. Prices are firm and the dealers have no reason to be dissatisfied, particularly as a number of building contracts are yet to be given.

The axe trade is a growing one in St. John. This year the local manufacturers are looking for an even more successful season than usual, as they are extending their operations. Present prices are a little higher than last year. Double bitt axes are selling at about $12; single bitt axes at $7.

MINES AND MINERALS.

The Dominion Copper Co. have acquired the Boundary Falls smelter, the Sunset, Morrison, Athelstan and Brooklin properties from the Montreal and Boston syndicate and it is said modern machinery and four blast furnaces and a converting plant to reduce matte to blister copper will be installed.

* * *

G. O. Buchanan, of Kaslo, Government inspector, estimates that the lead refined for the last fiscal year in British Columbia amounted to 17,000 tons, of which 11,000 tons were exported. Upon this quantity of refined the bounty, speaking roughly, would amount to $10,000.

* * *

Three weeks' work on M. J. O'Brien's mine at Cobalt is said to have produced 26 tons of metal averaging $2,000 to the ton. The district is being overrun with prospectors.

* * *

The C.P.R. are considering the establishment of a smelter for the smelting of the cobalt and silver ore from New Ontario, which now goes to New York, and is thence forwarded to Saxony.

* * *

The Canadian-American Coal and Coke Co. at Frank, Alberta, are mining and shipping 400 tons of coal per day. Part of the mine is still closed on account of the recent fire. They intend opening it up again about July 15.

* * *

The report that the Nova Scotia Steel & Coal Co. were to remove their plant to Sydney Mines was mixed up with the closing of the furnace at Ferrona and the removal of the Trenton plant. The ore has all gone to Sydney Mines since last Fall and the ingots all go to Trenton for manipulation. Trenton is considered a better point for distributing the finished product than Sydney Mines.

WHITE LEAD JUMPS UP.

The tariff changes announced in Hon. Mr. Fielding's Budget speech has sent the prices of ground white lead up to $100 per ton in Montreal, according to a telegram received Friday noon. In Toronto $110 per ton is quoted. Although some dealers are quoting $5.50 per hundred, others are a shade below this. It will take a few days for matters to settle themselves, and prices may go as low as $5.40 or as high as $5.60.

WINNIPEG, - CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, July 7, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

PREPARATIONS are being made for two important conventions in Winnipeg during the next few weeks. The first is that of the Western Retail Hardware and Store Dealers' Association, and the second is that of the Master Plumbers' Association. Both promise to be highly successful. The Hardware Association meet on July 26th and 27th, and the plumbers on August 8, 9 and 10.

* * *

Business is active in all lines, and prices are steady. There are no important changes to note.

* * *

Screen Wire Cloth—Price is steady at $1.55 per 100 square feet.

Poultry Netting — In brisk demand. For the 2-inch mesh in No. 19 gauge wire, prices are as follows:

24-inch roll, perroll	$1 20
30 " "	1 50
36 " "	1 80
48 " "	2 40
60 " "	3 00
72 " "	3 60

Wire—More fencing has been sold this season than in any previous season, and there is no slackening in the demand. Staple lines of wire are also in good demand at steady prices. We quote:

Barbed wire, 100 lb	$2 85
Plain galvanized, 6 to 8	3 39
" 9	2 50 2 90
Plain galvanized, 10	3 50
" 12	3 10
" 13	3 20
" 14	3 90
" 15	4 45
" 16	4 60
Plain twist	3 85
Staples	3 35
Oiled annealed wire, 10	2 96
" 11	3 02
" 12	3 10
" 13	3 20
" 14	3 30
" 15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—In normal demand for the season. Prices continue as follows:

Horseshoes, iron, No. 0 to No 1	$4 55
No. 2 and larger	4 30
Snow shoes, No. 0 to No. 1	4 80
No. 2 and larger	4 55
Steel, No. 0 to No. 1	4 75
No. 2 and larger	4 50

Horsenails—Discounts are as follows: "C" brand 40. 10 and 7 1-2 per cent.. "M" brand and other brands 55 and 60 per cent. Add 15c. per box.

Wire Nails—Moving in very large quantities. Base price: $2.85 per keg.

Cut Nails—Base price $3 per keg. Very few selling.

Screws—In very brisk demand. Discounts continue as follows:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat "brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are quoted as follows:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.25
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discount 60 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g.hickory, doz.	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—We quote:

Axes, chopping	$ 6 75 to 12 co
" double bitts	12 00 to 18 co

Files—We again quote as follows:

"Arcade"	70 and 10 p.c.
"Black Diamond"	60 p.c.
"Nicholson's"	62½ p.c.

Building Paper—There is some competition in building paper. Prices are quoted as follows:

Anchor, plain	55c.
" tarred	70c.
Pure fibre, plain	60c.
" " tarred	80c.

Ammunition, Etc.—Prices and discounts are quoted as follows:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	15 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.
Loaded shells:	
Eley's and Kynoch's soft, 12 gauge black	15 00
chilled, 12 gauge	16 00
soft, 10 gauge	18 00
chilled, 10 gauge	19 00
Shot, Ordinary, per 100 lb	6 25
Chilled	6 75
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—Business is fairly active. Prices are quoted as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 25
Lathyarn	11 25

Solder—The price is 20 cents per lb. for ordinary quantities, with concessions for large orders.

Iron and Steel—The iron and steel market is quiet locally, and there are no changes to note. We quote:

Bar iron (basis)	2 50
Swedish iron (basis)	4 75
Sleigh shoe steel	2 65
Spring steel	3 00
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	12 00

Black Sheets—Trade is active. Prices are steady. We quote:

Black Sheets, 10 to 16 gauge, 100 lb	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Sheets—Demand continues active. Prices are steady. We quote:

Apollo, 16 gauge	4 00
18 and 20 gauge	4 00
22 and 24 gauge	4 25
26 gauge	4 25
28 gauge	4 50
30 gauge or 10¾ oz	4 75
Queen's Head, 24 gauge	4 25
26 gauge	4 50
28 "	4 75

Tin Plates—Prices are quoted as follows:

Tinplate, IC charcoal, 20 x 28, box	9 50
" IX "	11 55
" XXI "	13 00

Canada Plates—There is a fairly active demand. Prices are:

Canada plate, 18 x 21, 18 x 24	3 25
Canada plate, 20 x 28	3 50
Canada plate, full polished	4 00

Sheet Zinc—The price of cask lots is $8.25 per 100 lbs.; price of broken lots is $8.75.

Pig Lead—$4.50 per 100 lbs.

Iron Pipe—We quote:

Black iron pipe, ⅛ inch	....
" ¼ "	2 45
Black iron pipe, ⅜ inch	2 65
" ½ "	3 00
" ¾ "	3 80
" 1 "	5 50
" 1¼ "	7 45
" 1½ "	8 95
" 2 "	12 30

Petroleum—No change in price. We quote:

Silver Star, per gal	20½c.
Sunlight "	21½c.
Eocene "	23½c.
Pennoline "	24½c.
Crystal Spray "	23½c.
Silver Light	21½c.

(In barrels f.o.b. Winnipeg.)

Paris Green—In seasonable demand. We quote:

English Paris Green—Petroleum barrels, 14 1-4c.; arsenic kegs, 14 1-2c.; 50 and 100-lb. drums, 15c.; 25-lb. drums, 15 1-2c.; 1-lb. tins, 17c.; 1-2-lb. tins, 19c.; 1-lb. cardboard boxes, 16c.; 1-2-lb. ditto, 18c. Terms 2 per cent. off for cash in 30 days; 90 days net.

Canadian Paris Green—50-lb. drums 17c., bulk 18c.; in 1-lb. packages 20 cents.

Paints and Oils—Turpentine and oil are steady for the moment at last week's prices. There is a heavy movement of all painting materials. We quote:

White lead (pure)	$5 00 to $5 50
Bladder putty, in bbls	0 02½
" " in kegs	0 02¾

BUSINESS CHANCES.

IF you wish to buy or sell a business anywhere in Western Canada, it will pay you to communicate with us. We have some good legitimate propositions on our list; handle nothing else. Address The Business Brokers, 611 McIntyre Block, Winnipeg, Man. (tf)

MANUFACTURERS' AGENT WANTED.

A LARGE firm of bedstead manufacturers in Birmingham, Eng., are open to engage an agent in Canada for the sale of their goods. Address Box 254, HARDWARE AND METAL, Toronto. (tf)

BUSINESS FOR SALE.

HARDWARE, stoves, tinware stock and good will of Rogers hardware store, Keele and Dundas streets, Toronto Junction, Ont., for sale on easy terms to suit purchaser; stock can be inspected and particulars obtained on premises or by writing to above address. [27)

HARDWARE and tinsmithing business on Main Line C.P.R. in Manitoba. Stock and fixtures $9,000. Solid stone store $3,500. Terms: Half cash, balance on easy payments. Purchaser can lease store if preferred. This is an old and well established business, paying handsome profits. Good reason for selling. For full particulars apply P.O. Box 32, Oak Lake, Man. (29)

SITUATION VACANT.

WANTED—Tinsmith for eavetroughing and furnace work; state wages. H. Andrews, Orillia, Ont.

TRAVELER WANTED.

A MIDDLE-AGED gentleman of good address is wanted to call on the trade in Ontario. No samples to carry. A very good opening for a retired or retiring general merchant who desires a light, healthy occupation with good remuneration if successful. Give references. Box 260 HARDWARE AND METAL, Toronto. (25tf)

PITCH FOR SALE.

ONE carload hard carbon pitch now in our warehouse. Canadian General Electric Co., Limited, Peterboro'. (28)

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Supplying Coal for the Dominion Buildihgs," will be received at this office until Tuesday, August 8, 1905, inclusively, for the supply of Coal for the Public Buildings throughout the Dominion.

Combined specification and form of tender can be obtained on application at this office.

Persons tendering are notified that tenders will not be considered unless made on the printed form supplied, and signed with their actual signatures.

Each tender must be accompanied by an accepted cheque on a chartered bank, made payable to the order of the Honourable the Minister of Public Works, equal to ten per cent. of the amount of the tender, which will be forfeited if the party tendering decline to enter into a contract when called upon to do so, or if he fail to complete the work contracted for. If the tender be not accepted the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

By order,
FRED. GELINAS,
Secretary.

Department of Public Works,
Ottawa, June 26, 1905.

Newspapers inserting this advertisement without authority from the Department, will not be paid for it. (27)

PERSONAL MENTION.

Taylor Bros., New Liskeard, have opened a branch hardware store at Cobalt.

Mr. C. Richardson, of the Caverhill-Learmont Co., Limited, has gone for a short holiday.

Mr. James R. Wilson, of the Thos. Robertson Co., Limited, has returned from a pleasant fishing trip.

Mr. Fred Stadelman has been appointed assistant manager of the New York office of the Wellman-Seaver-Morgan Co.

J. A. Flett, Vancouver, has opened a fine new hardware store on Hastings street, next to Woodward's departmental store.

Captain Pritchard, of the Lewis Bros. Co., is away in the Eastern Provinces, where he has joined his regiment in their annual camp.

The Fletcher Mfg. Co. are putting in a new store front on their hardware store at College and Yonge streets, Toronto, the cost to be $1,500.

Mr. Harry V. Croll, M.E., for the past eight years with the E. P. Allis Co., and their successors, Allis-Chalmers Co., of Chicago, has resigned and accepted a position with the Wellman-Seaver-Morgan Co., of Cleveland, Ohio.

Mr. W. A. Stadelman, eastern agent of the Wellman-Seaver-Morgan Co., and who has been in charge of the eastern office at No. 42 Broadway, New York City, has been appointed general sales agent of the same company, with headquarters at Cleveland, Ohio, taking effect July 1st.

Hardware and Metal's representative in the Maritime Provinces had a nice chat with Mr. G. Stothart, the hardware merchant of Chatham, N.B. He is still doing business at the old stand, and reports trade very good. Mr. Stothart has been reading Hardware and Metal for the past seventeen years, and still looks for it every week.

Mr. M. J. Curtin, who for 14 years has been on the staff of Lewis Bros., Limited, Montreal, decided recently to leave the firm and go west. Before severing his connection the company and staff presented him with a gold watch and a suitable address as a memento of their appreciation of his personal worth. Mr. Curtin replied to the donors, and was then wished the heartiest of good things for his future.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Armoury at Guelph, Ont.," will be received at this office until Monday, July, 17, 1905, inclusively, for the construction of an Armoury at Guelph, Ont.

Plans and specification can be seen and forms of tender obtained at this Department or on application to the caretaker of Public Building, Guelph, Ont.

Persons tendering are notified that tenders will not be considered unless made on the printed form supplied, and signed with their actual signatures.

Each tender must be accompanied by an accepted cheque on a chartered bank, made payable to the order of the Honourable the Minister of Public Works, equal to ten per cent (10 p. c) of the amount of the tender, which will be forfeited if the party tendering decline to enter into a contract when called upon to do so, or if he fail to complete the work contracted for. If the tender be not accepted the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

By Order,
FRED. GELINAS,
Department of Public Works. Secretary.

Ottawa, June 24, 1905.

Newspapers inserting this advertisement without authority from the Department, will not be paid for it. (28)

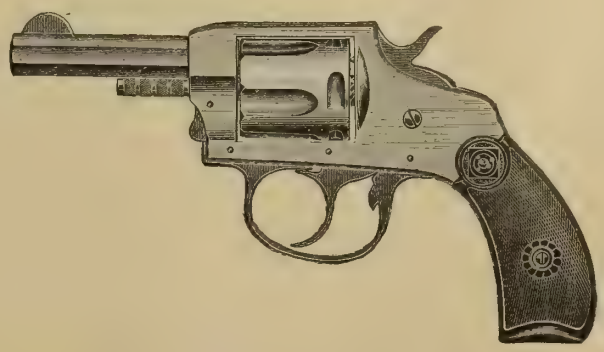
NOVELTIES FOR THE HARDWAREMEN

COLUMBIAN VISES.

Solid box and machinists' vises are shown in the two cuts reproduced herewith, the Columbian Hardware Co., Cleveland, Ohio, being the manufacturers. This company succeeded the Trenton Vise and Tool Works and the Van Wagoner & Williams Hardware Co., both of which concerns won an enviable record for honesty in the manufacture of tools.



Solid Box Vise.

Machinists' Vise.

DOUBLE-ACTION REVOLVERS.

THE Harrington & Richardson Arms Co., Worcester, Mass., have lately put on the market solid frame double action revolvers, models 1904 and 1905. The latter model, shown herewith, is a small frame revolver following the lines of the company's Premier revolver, .32 caliber, and eventually will probably succeed the Young America revolver in .32 caliber only. This model with 2½-inch barrel weighs 11 ounces and handles the .32 S. & W. cartridge. The 1904 model follows closely the lines of the company's Automatic, and is intended to succeed the American double action in .32 and .38 calibers, which has been made for more than 20 years. This revolver in .32 caliber is six-shot and with 2½-inch barrel weighs 16 ounces. In addition to the .32 S. & W. it will handle the .32 S. & W. long and .32 Colt new police cartridges. In .38 caliber this model is five-shot, and with 2½-inch barrel weighs 15 ounces, handling only the .38 S. & W. cartridge. Both of the above models can be furnished with 4½ and 6-inch octagon barrels in either nickel or blue finish.

1905 Model Solid Frame Double-Action Revolver.

COAXER BAITS.

COAXER baits, manufactured by W. J. Jamison, Chicago, Ill., were placed on the market only about a year ago, and have already reached a very large sale, which speaks volumes for their efficiency and indicates that when cast among fish they are just what their name indicates. This bait has been prepared after a great deal of study and observation, and is said to be about as near nature as it is possible to get, and close enough to fool the most wary of fish. It is pronounced an ideal surface bait, and what is most important, is constructed so as to get through rushes and over floating weeds and drift without snagging. It is a

Coaxer Bait.

brilliant bait, as well as graceful in design and lively in action. It is easy to cast, and the manufacturer simply guarantees it to please the most critical fisherman. We show here the Coxer No. 2, in its exact size. It is a great favorite with expert fishermen for both bass and pickerel, while it can be used for casting, skittering or trolling. An attractive little catalogue telling all about these baits will be sent if you ask the manufacturer and mention this paper. A gang hook attachment is also made to hang from the eye of the hook in the bait. This is for those who like more hooks when fishing in clear water. When in weeds the hooks can be instantly removed, leaving one bait weedless.

PAINT, OIL AND BRUSH TRADES

PLUMBISM IN PAINT WORKS.

A SPECIAL report has just been issued by the British Government, prepared by Dr. T. M. Legge, H. M. Inspector of Factories, on the manufacture of paints and colors containing lead, as affecting the health of the operatives employed. Dr. Legge describes his communication as "a report upon the incidence of plumbism in paint and color works, and upon the working of the existing special rules for the processes in the manufacture of paint colors and the extraction of arsenic." These processes were certified by the Secretary of State as injurious to health on May 13, 1892, and in the same year special rules were established, and have remained in force until now. The medical inspector says the interpretation which it is possible to give to "processes in the manufacture of paints and colors" is very wide, and, since neither in the definition nor in the first paragraph is mention anywhere made of lead, the supplement to the annual report for 1900 shows that there were 370 paint and color works, employing 5,839 persons (5,420 males, 419 females). It is easy to understand how it comes that wide extension has been given to the application of the rules seeing that the requirements are very moderate, meaning little more than provision of washing accommodation and overalls for those employed in lead grinding. What would have caused difficulty, viz., exhaust ventilation at the grinding and mixing mills for white lead, was not required, no doubt because the greater effect of the inhalation of dust as a cause of plumbism as contrasted with the observance of personal cleanliness was not sufficiently recognized at the time the rules were promulgated.

The chief centres of the paint and color industry are East and South London, Liverpool, Glasgow, Hull, Manchester and Birmingham. There are 318 works now under the special rules. In 70 of these works lead poisoning has occurred, 252 males and 17 females are reported as having been attacked. The inspector gives an analysis of 225 cases of lead poisoning among male adults, from works under the special rules for paints and colors. Having eliminated all the doubtful cases, he shows how the poison entered the system in the others. He finds there were 164 cases caused by the absorption of dust (mainly of white lead) and 41 cases were the effects of wet processes in color houses and other causes, leaving 20 cases unaccounted for. He thus comes to the conclusion that the dust in the mixing and grinding of white lead is responsible for the great bulk of poisoning which takes place in paint and color works, and that the removal or diminution of this source of danger would at once reduce the incidence of poisoning in them.

He describes briefly how the processes are carried on. "In a small factory a cask of white lead is broken and the material scooped out and placed in a pail. Scales are at hand, and when the amount of lead removed weighs half a cwt. the contents of the pail are discharged either into a cylindrical pug mill or into the pan of an edge runner. Oil is then added. Dust is unavoidably created in the scooping out, and more especially in the discharge of the contents into the pan. The first few revolutions of the edge runner also create dust before the material has had time to mix with the oil." In larger works there is usually an upper platform in which the white lead is shoveled out of the cask into openings in the floor leading to shoots which convey the white lead into the pug mills or edge runners below. Dust here, in the absence of an exhaust draught, inevitably arises in the shoveling of the white lead when it enters the shoot, and also when it is discharged into the pug mill below. From an examination of the returns, furnished by the district inspectors, of 148 paint works in which one or other of these methods of grinding white lead is carried on, it appears that in 16 only has any attempt been made to control the dust at these points. In some of these the installation has followed on particular risks observed during the course of this inquiry, and in others the arrangement made has not been applied in the best way.

The medical inspector describes the various processes, and the character of the works in which he met with them, and then in an appendix he makes suggestions as to how the inhalation of dust—the prime source of the trouble—is to be prevented. Respirators and systems of ventilation have not prevented plumbism. He then submits a series of suggestions, summarized as follows:

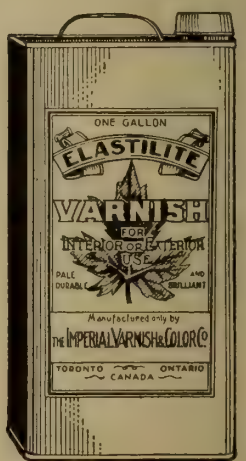
Duties of Employers.

No dry compounds of lead shall be placed in any hopper without an efficient exhaust draught to draw the dust away from the worker.

No dry compounds of lead shall be manipulated except—

(a) in an apparatus so closed as to prevent the escape of gas; or

(b) with an efficient exhaust draught and air guide so arranged as to carry away the dust as near as possible to the point of origin.



No woman, young person, or child shall be employed in manipulating dry colors containing compounds of lead.

Every person employed in a lead process shall be examined once in each calendar month by the certifying surgeon of the district, who shall have power to suspend from employment in any lead process.

Overalls shall be provided for all persons employed in lead processes; and a

cloak-room and dining-room (unless the factory is closed during meal hours) shall be provided.

Duties of Persons Employed.

All persons employed in lead processes shall present themselves for examination.

No person after suspension shall work in a lead process without written sanction by the certifying surgeon.

Every person employed in a lead process shall wear the overalls provided.

No person shall introduce or partake of any food or tobacco in any room in which any person is employed in a lead process.

No person employed in a lead process shall leave the premises or partake of meals without previously and carefully cleaning and washing the hands.

TURPENTINE AT SAVANNAH.

THE futility of the effort to hold up artificially high prices for spirits of turpentine at Savannah is seen in the course of the market there since the collapse of the boom of a week or two ago, says the Paint, Oil & Drug Review. On June 1st there were in stock at Savannah 5,536 casks of spirits. It was then that the market was advancing to the high point of 79c., which was reached late that week. At once the producers of the south began to rush their spirits to Savannah as the highest market. On June 10 the stock at Savannah had increased nearly three-fold and stood at 15,752 casks. Then the market began to decline. The load was too heavy; and in a few days quotations fell to 20c. below the highest point of June. There was a reaction to 1 to 2c. higher, but the market is not strong.

Meantime, the stocks continue to increase. On June 17 they were 19,910 casks; on June 24, 25,569 casks. Savannah has attained the reputation of being the highest spirits turpentine market, and the results are seen in the increased shipments to that port. That they will be relatively any smaller this season is unlikely. So long as Savannah makes the price of spirits she will get the bulk of the shipments, and it will not be possible to maintain more than moderately high prices.

DAMP PROOF ADHESIVE.

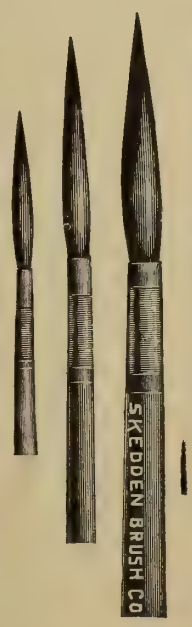
It is not generally known that a fair knotting varnish free from surplus oil is by far the best adhesive for fixing labels, especially on metal surfaces. It dries instantly, ensuring a speedy job and immediate packing, if needful, without fear of derangement. It has great tenacity, and is not only absolutely damp-proof itself, but is actually repellent of moisture to which all water pastes are subject. It costs more, but the additional expense is often infinitesimal compared with the pleasure of a satisfactory result.

SMOKE TURNED INTO GAS.

A novel method of getting rid of black smoke, and at the same time turning it to use, is adopted at some Belgian factories. The smoke is driven by fans into a porous receptacle, over which flows a stream of petroleum or similar liquid. The smoke is thus caught and turned into gas that gives great heat, and can be used for running gas engines.

GERMAN VIEW OF U.S. MARKETS.

A LARGE firm of importers of rosin in Hamburg wrote as follows to a German trade paper last month:



"It appears to us to be desirable to throw some light on the American rosin market and the abnormally high prices and ridiculous unsteadiness in the quotations. Probably not everyone interested in this article is aware of the circumstance that the larger portion of the rosin produced in America must, according to contract, be taken over by an American trust at Savannah market prices. The consequences of this obligation to the trust are that it must buy at Savannah prices a large amount of rosin without being able to find a ready outlet at profitable prices for the daily receipts. The rosin is therefore stored in the ports until a very large amount of the various grades is accumulated, then favorable market conditions are provided, and the accumulated stock is disposed of. From the moment when the trust has succeeded in cleaning up its holdings, or at least the greater portion of them, at the artificially raised prices, the market at Savannah drops, for the next point is to buy cheaply again until a repetition of the same manipulation yields the highest profit attainable. The same game is performed about a dozen times a year. An attentive observer of the rosin market may often have looked in vain for the reasons of these frequent fluctuations, for as a matter of fact there are no reasons whatever. The only chance to oppose the rosin trust successfully lies in the association of consumers and others interested in a joint stand against it."

Paint and Oil Markets

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 7, 1905.

BUSINESS continues to flourish. Paints and oils are selling more freely than they were last year at this time, and the demand seems to be increasing. No Summer decline has taken place, and it is evident that this branch of the hardwareman's business is receiving great attention.

Turpentine is lower than it has been or some time, and the drop is most likely to hold. The boom in Paris green keeps steadily up and there is a probability of an advance in price. This was reported through the trade but it is by no means a positive announcement. White lead is firm and in increased demand all over.

Canadian Paris Green — Barrels, 15 1-4c.; arsenic kegs, 15c.; 50 and 100-lb. drums, 16c.; 25-lb. drums, 16 1-2c.; one pound packages, 17c.; half-pound packages, 19c.; one pound tins, 18c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green—Pure English Paris green, petroleum barrels, 15 1-4c.; arsenic kegs, 15 1-2c.; 50 and 100-lb. drums, 16c.; 25-lb. drums, 16 1-2c.; one pound paper boxes, 17c., one pound tins, 18c.; one-half pound paper boxes, 19c.; one-half pound tins, 20c. Terms, 2 per cent. off thirty days, or ninety days net from date of shipment.

Turpentine—Single barrels 93c. per gallon; two to four barrels, 92c. per gallon. For smaller quantities than barrels, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Raw, one to four barrels, 52c.; five to nine barrels, 51c.; boiled, one to four barrels, 55c.; five to nine barrels, 54c. f.o.b. Montreal., Net 30 days.

Ground White Lead — Best brands Government standards, $4.70 to $4.85; No. 1, $4.45 to $4.60; No. 2, $4.20 to $4.35; No. 3, $3.87 1-2 to $3.97 1-2; No. 4, $3.50 to $3.60, all f.o.b. Montreal.

Dry White Zinc—Pure dry in casks, 7c.; in 100 lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb kegs, 6 1-2c.

White Zinc (ground in oil)—Pure. 25 lb. iron, 7 1-2 to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—Pure linseed oil $1.75 to $1.85. Bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Shellac Varnish — Pure white in barrels $2.30 to $2.50; pure orange, $2 to $2.20; No. 1 orange, $1.90 to $2.10.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil—8 3-4c. to 9 1-4c. in wholesale lots, and 1-2c. additional for small lots.

Litharge—Ground, in casks, 5c.; in less quantities, 5 3-4c.; flake litharge, casks, $5.50; smaller quantities, $6 per 100 lbs.

Refined Petroleum—No change has occurred on this market. Prices are steady. Our quotations are: American prime white 14 1-2c., American water white 16c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, July 7, 1905.

LINSEED oil and turpentine have both weakened somewhat, although the market is bare of both articles. Quotations are still the same, but the tendency is downwards. So far there has been no cheap turpentine received although a few carloads sold at present quotations have arrived. Some jobbers are quoting at 85c. the goods to be delivered as soon as cheap oil arrives, but present delivery prices run from 95c. to $1. Oil receipts have also been light, but new goods expected to arrive in a few days may bring a decline.

Sales of mixed paints continue very large, and Paris green is moving at a tremendous rate. The call for the latter from country merchants is exceeding expectations, and stocks are being heavily called upon. The heavy building is causing a demand for dry colors and paint materials, which is taxing the shipping facilities of the jobbing houses to their utmost. Re-orders are becoming more frequent.

Petroleum and glass conditions have not changed, and there is nothing of importance in these lines to report.

White Lead—Ex Toronto, pure white lead. $4.75; No. 1, $4.37 1-2; No. 2, $4; No. 3, $3.62 1-2; No. 4, $3.35 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 1-2 lb. packages; genuine dry white lead, in casks, $4.25.

Red Lead—Genuine in casks of 560 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75; No. 1, in casks of 500 lbs., $4 to $4.25; ditto in kegs of 100 lbs., $4.50.

White Zinc—Genuine French V. M., in casks, $6.50 to $7; Lehigh, in casks, $6 to $6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Refined Petroleum—A normal business is being done. We quote: Water white, 16c.; Canadian prime white, 14 1-2c.; American water white, 16 1-2c. to 18 1-2c. ex warehouse.

Crude Petroleum—Conditions are unchanged. We quote: Pennsylvania, $1.29; Ohio, 84c.; Somerset, 81c.; Indiana. 88c.; Canadian, $1.27.

Glass—See current quotations at the end of this issue.

WINDOW GLASS—MONTREAL.

No marked improvement has taken place in the window glass situation, and the probabilities are that there may be no change for some time. Little glass is coming in by steamer, and the trade is poorly supplied in certain sizes. The cutting of glass to supply the trade is still going on, and the demand has not slackened. The building trade may be affected later if the imports do not improve. News from Belgium is not encouraging, and advice to buyers is to go ahead and stock as much as possible at once. Our quotations are as follows: First break, 50 feet, $2.00; second break, $2.10; first break, 100 feet, $3.75; second break, 100 feet, $3.95; third break, 100 feet, $4.50; fourth break, 100 feet, $4.75; fifth break, 100 feet, $5; sixth break, 100 feet, $5.50; seventh break, 100 feet, $6.00; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do.. $20; eleventh do., $24, and twelfth do., $28.50.

HOW TO TEST TURPENTINE.

To test the purity of turpentine drop a small quantity on a piece of white paper and expose to the air. No trace will be left if the turpentine is pure, but if it contains oil or other foreign matter the paper will be greasy.

A WHITEWASH REMOVER.

To remove whitewash from walls so as to leave them in good condition for papering they should be thoroughly washed with a solution of vinegar or sulphuric acid and water before sizing. After the walls have been allowed to dry, the size may be applied thin and hot, after which they will be ready for papering.

LEWIS BROTHERS MOVE.

The Lewis Bros. Co. will begin moving to their new building on Bleury street on Monday, 10th inst. The operation of moving, trying and all as it will be for so large a concern, will in no way interfere with the maintenance of their motto, "Prompt shipment," and customers will not know that there is a change going on—a change, too, that means one step in the evolution of one of the largest and most progressive houses in the Dominion.

Up-to-date methods rule at this establishment, as was remarked recently in one of their ads., where the head of an axe appeared. Right on the side of the axe blade is emblazoned a very attractive reproduction of the Lewis Bros., Limited, new building. Everywhere on their stationery and in most unique places, pictures have appeared, and no pains have been spared to let the public know of the change.

BARGAINS NEEDED.

Special bargains are an absolute necessity. Ten years ago this was not true in many sections. Almost anything went, but if you have not special bargains with which to attract and hold your trade, you will find yourself getting behind the procession in these swift days.

Because you have done business without special bargains and succeeded partly is no reason why you can continue to do so. We are past the dividing of the ways. There is no second choice. The people want special bargains and you must furnish them.

That is why the wholesale bargain lists, which wholesalers and manufacturers are sending to the trade are valuable to you.

Watch closely for deals that will make good specials. Buy them judiciously. You can load up too much even on special bargain goods, but you need some of them. They are the magnetism of your advertising.

BUSINESS CHANGES

Ontario.

J. A. Lavinge, carriage-maker, Cornwall, has assigned to G. I. Gage.

The store of Jas. H. Orr, plumber, Stratford, is closed.

Taylor Bros., hardware merchants, New Liskeard, are opening a branch at Cobalt.

Woods Stove Co., tinsmiths, plumbers, etc., Lindsay, are offering to compromise.

F. A. Musgrove & Co., harness-makers, Picton, have assigned to Jas. Gillespie, sheriff.

E. R. Rogers, hardware merchant and stove dealer, Toronto Junction, has advertised his business for sale.

Quebec.

Sanfacon & Paradis have been registered as blacksmiths, Quebec.

Chapleau & Bastien have been registered as contractors, Montreal.

Brunet & Brunet, contractors, Montreal, have dissolved partnership.

Lasnier & Boucher, saddlers, St. John's, have been succeeded by L. Lasnier.

Lewis Bros., Limited, have been registered as wholesale hardware merchants, Montreal.

F. Tousignant & Co. have been registered as blacksmiths and carriage-makers, St. Hyacinthe.

Hector Charbonneau & Cie. have been registered as wholesale and retail hardware merchants, Montreal.

Manitoba and N.W.T.

J. E. Carroll, tinsmith, Lemberg, has sold out to W. Marshall.

John Watson, dealer in implements, MacGregor, has sold to M. F. Ward.

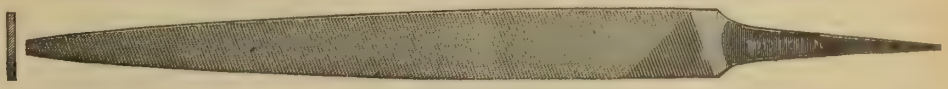
British Columbia.

British Columbia Wire & Nail Co., Limited, Vancouver, have suffered loss by fire to the extent of $1,000.

Nova Scotia.

The business of the estate of O. A. Rogers, hardware merchant, Middleton, is advertised for sale.

GERMAN DEPARTMENTAL STORES.



According to U.S. consular despatch Germany is contemplating the establishment of large departmental stores in the United States and other countries, the object being the exploitation of German goods.

The cry now raised by export and trade papers in Germany and Austria is, "Start department stores abroad." One of these journals says that the Belgian export houses have established department stores in foreign countries, and that the United States Export Organization is acting upon the propaganda started by United States consuls for the establishment of American department stores abroad. Dr. Salomonsohn, a partner of the Disconto Bank of Berlin, who made a tour of investigation through the United States, says in his book, giving his impressions of the journey, that "the most efficient means of defence against the 'American danger' is the adoption (by the Germans) of American methods, and, above all, the combination of German business firms."

STOVES AND TINWARE.

SELLING STOVES IN COUNTRY.

EZRY WOOD, who runs the hardware and stove store in the modest village of Kerr Centre, is not, strictly speaking, of a strenuous nature, and yet there occurs now and then a strenuous chapter in his otherwise tranquil career. Not long since, having sold a stove to a man who lives a few miles out in the country, he went next day to deliver it and set it up. The lady of the house did not see the stove until Ezry arrived with it and was proceeding to put it in place. It did not take her long to make up her mind that it was "no good," and that she would not have it. Her husband strove to convince her that it was just what she wanted; but she was not open to conviction and soon silenced him, as no doubt she had done many times before.

Then Ezry took a hand in the discussion by indiscreetly remarking that if she did not keep the stove he would have to be paid for his trouble in bringing it so far and taking it back again. When the old lady heard this she seemed to feel that her vocabulary was inadequate to do the subject justice, so she grabbed up the poker with an intention so obvious that Ezry leaped out, not deliberately, as he usually does things, but as if he had a long journey to make and very little time to make it in. As he reached the front gate he gave a look behind, and seeing a nickel plated poker glistening in the sunshine very close in his rear he proceeded to hit it down the turnpike, tandem fashion, with the old woman for a team mate.

There is nothing in which Ezry takes so much pride as his luxuriant growth of whiskers, which, being of the "loose chewing" variety, are very sensitive to air currents. Consequently, as he tore down the highway they streamed back over either shoulder like pennants waving defiance to the oncoming poker. In one respect Ezry had a slight advantage as he was going toward home, while his pursuer was going away from hers, and he was not inclined to throw away any advantage he might have, no matter how slight. The pursuer made some vicious slashes at Ezry's fleeing form, but just failed to connect. Ezry did not do a great deal of talking. On the contrary, he conducted himself like a man who had other uses for his breath just then. But the hunter in this cross country chase kept shouting: "Come back and git that stove." The command was unheeded so far as Ezry was concerned, he probably thinking the conditions were not right for going back after it just then.

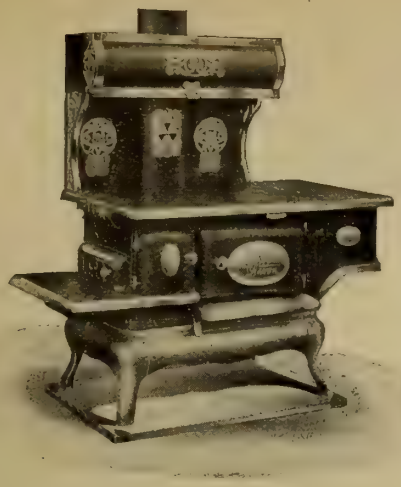
When convinced that Ezry did not intend to get lost by hesitating the old woman gave up the chase, much to the relief of Ezry's shocked running gear. After he had taken a position within hearing, but out of poker reach diplomatic relations were resumed, although it was evident from Ezry's manner that he was prepared to make a quick passage home in the event of those relations being suddenly broken off. After some parleying in which Ezry engaged mostly as a listener, it was arranged that he was to go back to the house, get his horse and wagon, also the stove, and the woman was to come to his store next day and select another one more to her taste. He was to get nothing, however, for delivering the rejected stove. This suited Ezry, on condition that she paid cash and carted home the stove she selected. She finally agreed to do so, and Ezry went back, loaded the stove in his wagon and took it home with him.

After getting it there he quietly removed the name plate from it, and substituted a shorter handled poker for the one that had caused him to exceed the speed limit. Now Ezry was born in the country and has lived his whole life there, but his birth was not an event of recent date, nor had the intervening time been wasted by him, as all of his acquaintances are aware. So the next day, when the woman and her husband came to purchase another stove, Ezry, in his unsophisticated way, sold them the same stove over again without their knowing it, and at an advance of $3 over the former price.

As he saw his customers drive off with their purchase and felt the "long green" in his pocket, Ezry calmly milked his chin foliage, and soliloquized something like the following: "She had me purty scart there one spell, but I guess she held the hot end of the poker after all."
—Metal Worker.

NEW MILK MEASURE.

Messrs. T. G. Adams & Co., Birmingham, England, have brought out a novelty in enamelled ware in the shape of a milk measure. The measure is in the form of a tin basin, having grooves or ridges around the measure indicating the exact depth of pints and quarts. Hitherto no lettered milk measures would pass muster, because it was quite easy to tilt the bowl slightly so that the milk reached the measure. In the new bowl the complete line round it prevents any dodging of that kind.



STOVE ITEMS.

What has been your experience with stove demonstrations? Do they bring customers or loafers to the store?

Have you had a stove demonstration in your store? Get the grocer to go in with you and have him supply some new pancake flour or tea. It will benefit both of you.

The James Smart Mfg. Co., Limited, Brockville, have been awarded the contract for installing heating and ventilating systems in the Roman Catholic church at Paris, Ont. Two large Kelsey heaters will be used.

Trouble is saved by seeing that every stove sold is set up properly. Too often this important part of the business is entrusted to the purchaser who has no more idea of how a stove should be set up than that it should be connected with a flue in any old way. The flue must be good and the elbows of the pipe must be as few as possible, besides the height of the chimney and other items are of much importance.

THE EMPIRE QUEEN RANGE

pleases the women

It pleases them because it is a **pleasure** to work with. It is easy to clean, heats uniformly, can be changed from wood to coal without difficulty, and the ashes are easily removed. Would you like to be an agent for **The Empire Queen Range?**

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

THE public have read much of the coal deposits at Medicine Hat, but few have had any idea of its natural gas supply. According to Mayor Forster, the supply is so abundant that gas is furnished to the citizens at 17½ cents per thousand cubic feet for power, light and heating purposes. One of the largest stores in Medicine Hat is well lighted at a cost of 80 cents per month. The proprietor of one of the finest residences in the town paid $60.50 for a whole year's supply of gas for heating during the Winter, lighting the year round and fuel for cooking purposes. A special rate is quoted for manufacturers. Any manufacturer investing $10,000 and employing ten or more hands can secure gas at 5 cents per thousand cubic feet. The town waterworks, the C.P.R. workshops and every industry in the town are operated with natural gas, while the city streets are lighted by a 750-candle-power arc lamp at a cost of 4 cents per night.

The Brantford Screw Co. may extend their works in the near future.

The Plymouth Cordage Co. have decided to accept Welland's offer and locate a factory there.

Guelph City Council has accepted the terms of the Fielding Chemical Co., which are proposing to locate there.

Guelph has decided to purchase an electric lighting plant from Goldie & McCullough, Galt, at a cost of $2,957.

The John Cober Carriage Co., of Listowel, are talking of moving to Hespeler. They employ 20 to 30 men.

A large manufacturing industry in the United States are looking for a site at Toronto Junction. Negotiations are on for the old electric light premises.

Several tests have been made at the works of the Sydney Cement Co., the results being considered very satisfactory. The company expects to be shipping cement in August.

Two of the four open hearth furnaces of the Nova Scotia Steel Co. at Sydney Mines were lighted last Saturday, and the first product of steel will likely be secured this week. For the present only ingot steel will be produced.

The London Machine Tool Co. have decided to remain in London, having secured a splendid site of seventeen and a half acres just east of the city limits, and lying between the Grand Trunk Railway tracks and Trafalgar street.

The Rhodes, Curry & Edmond Co., of Amherst and Sydney, purchased the plant of the Sydney Mfg. Co., and the franchises of that company to manufacture steel cars. The premises will be enlarged and the manufacture of steel and other railway cars commenced.

The site of the blast furnace and coal docks at Port Arthur has been changed, and the works will be located three-quarters of a mile closer to the town, near the Canadian Northern roundhouse. It was found that the bottom at the first site was not suitable for a foundation, and the companies decided to change the site. The new site will greatly benefit Port Arthur. Barnet & Ricord are moving their plant to the site to-day.

The Canadian General Electric Co. will get a large quantity of work out of the conversion of steam power plants into electric power plants in Toronto. As soon as the Niagara power is turned on the construction of the new electric railway to Niagara will be started. In the construction of this line and in the conversion of power plants there will be from $2,500,000 to $3,000,000 of work, the bulk of which will go to the Canadian General Electric Co.

A group of claims of specular hematite iron ore is located at Crawford Bay on the north arm of Kootenay Lake, about 25 miles from Nelson, B.C. The owners have entered upon the development of this deposit, and it is expected that they will soon be manufacturing pig iron upon a large scale. It is said that adjoining the iron ore there is a large deposit of limestone needed for a flux in smelting iron ores. Both deposits are said to be practically unlimited, and the iron ore is the finest yet discovered in the eastern portion of the province.

Thomas Drummond, vice-president of the Lake Superior Corporation, states that the report of the re-opening of the car shops at Sault Ste. Marie is premature. As a matter of fact, the shops which have a capacity of eight finished freight cars per day are ready to open at any time that sufficient business offers, but there is at present no work for them. Speaking of the rail mill, Mr. Drummond says that they are now turning out considerably upward of 500 tons per day, which are all contracted for. The total rail output since the mills opened amounts to 100,000 tons.

The second of the three power development companies at Niagara Falls is now ready for business. On July 1 and 2 the Ontario Power Co. had a section of its power house running and turned power on a transmission line. The water was let into the great mile-long steel and concrete conduit from the head gates, ran down to the table rock, plunged down through the penstocks a hundred and fifty feet, set the ten-thousand horse-power turbines spinning and escaped into the river again. Not a hitch or a delay occurred. Every bit of the ponderous machinery moved like the works of a watch.

Judge Reynolds, Brockville, has given an important decision on a clause of the new Assessment Act. The new Act says that machinery shall be assessed as part of the real estate, but exempts fixed machinery used for manufacturing purposes. James Cummings, of Lyn, who owns a large mill property, appealed against his business assessment, which is based on the real estate value, the assessors having placed the machinery as part of the real estate. The

judge decided that fixed machinery meant any machinery being permanently used for manufacturing purposes, and consequently his milling machinery was exempt. This judgment is very important to manufacturers.

A manufacturing plant which would revolutionize the iron foundry business on the coast may be located in Vancouver if it is found that the possible business would warrant the investment. The plant would be one for the conversion of common iron castings into steel. For instance, an ordinary cast iron gear wheel or a pulley can be turned into steel by an already well-tested and practical process as easily as cream is turned into cheese. The possibilities of the process are practically illimitable. It is stated that ordinary cast iron can even be converted into tool steel that will take a temper superior even to that of Jessop's best. The promoters of the Ottawa Steel Castings Co. are said to be behind the move in Vancouver.

Companies Incorporated.

The Western Canada Cement and Coal Co., Limited, of Ottawa, have been incorporated with a share capital of $1,250,000.

The Ajax Production Co., of the State of Delaware, have been granted the right to carry on the business of an ail company to the extent of $40,000. G. A. McGilivary, of Petrolea, is attorney.

M. Beatty & Sons, Limited, of Welland; share capital, $300,000; purpose to manufacture and sell machinery of all kinds. The directors are: W. L. Beatty, H. L. G. Beatty and A. O. Beatty, all of Welland.

American Radiator Co., of the State of New Jersey, have been granted the right to manufacture and deal in radiators, boilers, etc., and to do business to the extent of $50,000. N. Whitelaw, of Brantford, is its attorney.

The Dennis Wire & Iron Works Co., Limited, of London; share capital, $50,000; purpose to manufacture and deal in architectural and ornamental metal work. The directors are: J. H. T. Dennis, E. R. Dennis and C. H. Ivey.

The Capewell Horse Nail Co., Limited, of the State of Connecticut, have been granted the right to manufacture and sell machinery, horseshoe nails, etc., to the extent of $400,000. C. H. Fleming, of Toronto, is its attorney.

The Matthews Turbine Co., Limited, of Toronto; share capital, $100,000; purpose, to manufacture and deal in goods, wares and merchandise. The directors are: E. MacKenzie, T. Lawless, C. B. Jackes, J. P. Murray and J. P. Beaty, all of Toronto.

The Canada Sand-Lime Pressed Brick Co., Limited, of Toronto Junction; share capital, $60,000; purpose to manufacture and sell brick, etc. The directors are: R. Kennedy, W. M. Flavelle, J. Carew, J. D. Flavelle and J. M. Squire, all of Lindsay.

Fairbanks-Morse Canadian Manufacturing Co., Limited, of Toronto; share capital, $250,000; purpose to manufacture and deal in tin, iron, steel, etc. The directors are: G. W. Sparks, of Chicago, Ill., and C. J. Brittain and A. W. Holmested, of Toronto.

The Mexican Electric Light Co., of Ottawa, share capital, $6,000,000; purpose, to carry on an electric light, heat and power business in Canada. The directors are: A. R. Doble, E.McK. Edgar, L. L. Edgar, C. F. Hibbert and L. Colwell, of Ottawa.

No. 12. OSHAWA, ONT. JULY 8, 1905

IF YOU KNEW

If you **knew** what **Perfect Metal Lath** meant to the builders and contractors of this country — of every country—and what acquainting some of them **meant** to you, you would soon see that no builder or contractor within your territory escaped your attention You would soon see that you profited by the opportunities which are offered—the inducements which we make to **you**. In short, if you are the progressive Hardwareman that we have reason to think you are, you would, in consideration of the above, first, write for our literature, terms and advice; and, second, when thus equipped, start out for conquests and **profits**.

YOU WOULD ACT

Perfect Metal Lath has the same relationship to the plastered wall or ceiling that the keystone has to the arch; it holds the mass together. Therein lies the secret of **Perfect Metal Lath's** success. Wooden lath, at its best, could not be relied upon to do this, because it is **not true.** The cracking of plaster, discolorations, etc., these defects were traceable to wooden lath; but far worse, ill-health, and worst of all **Fire. Perfect Metal Lath** sets at nought all these drawbacks to wooden lath. In addition, it can be applied more quickly than wooden lath—can be applied with **half** the energy, **half** the cost. If **Perfect Metal Lath** was expensive there might be reason for your inactivity. **It costs the builder 10c. per sq. yd.** No reason, then, for **your** not selling **Perfect Metal Lath,** except—**yourself.** Are you going to remain thus **always ? Opportunities pass by quickly.**

BUILDING AND CONSTRUCTION

MODERN APARTMENT HOUSE.

WHAT is expected to be the finest apartment house in the city, or in Canada, is about to be erected in Montreal, the site and building to cost $600,000. The plans show a building with an area of 125 by 170 feet. The walls will be constructed of stone, brick and terra-cotta, and the greatest care is being exercised to make the whole as nearly fireproof as modern invention will bring it. There will be a steel skeleton, the floors will be of tiles and marble, while the dadoes will be of marble, and the whole building will be finished in the most splendid manner possible.

The kitchen and dinning-room will be placed on the top floor. The building will have accommodation for 80 suites of rooms varying in size from family to bachelor apartments.

A fast passenger and freight elevator will be installed and the electric lighting of the building will be manufactured by the company with its own plant.

It is the intention of the syndicate to furnish the interior in a manner superior to anything in Canada, and if possible equal to anything of its kind in the world. The heating will be of steam, and there will also be an extensive cold storage plant which will be available for the different apartments.

CEMENT IN BUILDINGS.

DEVELOPMENT and expansion in the cement industry during the last decade have been phenomenal. The reason is that the product is immeasurably cheaper than stone, brick, wood, etc., their equal for most purposes and superior for many. The uses to which it can advantageously be applied are almost beyond conception, so that its growth during the next decade will undoubtedly be more wonderful than that of the last. Within the last few years the process of manufacture has so much improved as to reduce the cost more than 100 per cent.

Portland cement is made from natural rock, known technically as Trenton limestone, and when produced in commercial form is a fine powder, possessing the quality, when moistened with water, of binding itself and substances with which it may be mixed into a homogeneous mass, settling with remarkable quickness and drawing to a hardness greater than that of granite. In this condition it neither contracts nor expands, is impervious to water and unaffected by the most intense heat or cold.

In its commercial form the cement can be molded into any required shape. It is used "neat" and in combination with either sand, gravel, crushed stone, cinders, clinkers or slag, dependent entirely upon the uses to which it is to be applied, strength of material required or appearance desired. Many block machines have been invented, and blocks of cement stone of any size, shape or ornamentation can be cheaply and quickly manufactured. These machines make a perfect imitation of stone in any desired color or form, and can be colored in imitation of brown stone, red stone or of a greenish or bluish tinge, making a building more ornamental than can be produced by any natural rock.

Portland cement with iron or steel is used with great economy in the construction of skyscraper buildings, and will doubtless be so used to the almost exclusion of stone and brick in the near future. Scarcely a modern building is now constructed or can be constructed without the use of cement. As was demonstrated in the great Baltimore fire, cement or steel and cement in combination, provide the only fireproof building material.

ACTIVITY IN TWO CITIES.

The business the Toronto architect's office is doing in building permits this year does not indicate any letting up in building activity. In fact, the returns for the first six months of the year indicate a greater boom than ever. The following comparative table shows the situation at a glance.

	1904.	1905.
Jan. 1st to June 30th	$2,625,883	$4,194,326
June	1,100,820	1,303,208
Permits, 6 mos.	922	1,290
Permits in June	217	376
Buildings erected, 6 mos	743	1,535

In Montreal in June the value of new buildings totalled $396,943, with 124 permits issued. Last year, in June, there was a value of $373,827 and only 84 permits.

There was a total value of alterations and new buildings of $471,143, as against $419,285 for June, 1904, a difference of $51,858.

BUILDING NOTES.

A $6,000 Roman Catholic church is to be erected at Rainy River.

Pither & Leiser, Victoria, are to erect a three storey warehouse in Vancouver.

It is said that a large departmental store building will be erected in Hamilton.

Chas. S. Bridgman, Winnipeg, is to construct a warehouse 100 x 120 feet in Winnipeg.

PRODUCTION OF BESSEMER.

Great Britain made 916,374 tons of Bessemer steel rails in 1904. Its railmakers received an average of $22.48 per ton for them.

The United States the same year made 2,137,957 tons of Bessemer steel rails for which the members of the rail pool received $28 per ton.

The following table shows the tonnage, price per ton and total gross value of Bessemer rail output of the two countries for last year:

	Production	Av. Price	Gross Value
Great Britain....	916,374	$22 48	$20,600,084
United States....	2,137,957	28 00	59,862,796
